Valid SAP E-S4CPE-2405 Exam Testking | E-S4CPE-2405 Sample Questions Pdf

What's more, part of that BraindumpsVCE E-S4CPE-2405 dumps now are free: https://drive.google.com/open?id=1czISJ8ETUWk9s23WgbJ0KiKosx1Ea8EC

Our E-S4CPE-2405 exam questions have a 99% pass rate. What does this mean? As long as you purchase our E-S4CPE-2405 exam simulating and you are able to persist in your studies, you can basically pass the exam. This passing rate is not what we say out of thin air. This is the value we obtained from analyzing all the users' exam results. It can be said that choosing E-S4CPE-2405 study engine is your first step to pass the exam. Don't hesitate, just buy our E-S4CPE-2405 practice engine and you will succeed easily!

SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.
Topic 2	• System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.
Topic 3	• Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of application consultants and covers configuring SAP solutions to meet business needs, along with setting up and managing the SAP Fiori Launchpad. It also touches on customizing the user interface for an optimal and user-friendly experience.

Topic 4	• Data Migration and Business Process Testing: This section of the exam measures skills of SAP implementation consultants and covers the core principles of migrating data into SAP systems while ensuring that business processes run as intended. It involves understanding the methods for transferring data, verifying its accuracy, and executing process testing to confirm that the system meets operational requirements.
Topic 5	• Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.

Pass E-S4CPE-2405 Exam with Authoritative Valid E-S4CPE-2405 Exam Testking by BraindumpsVCE

Our E-S4CPE-2405 practice materials compiled by the most professional experts can offer you with high quality and accuracy practice materials for your success. Up to now, we have more than tens of thousands of customers around the world supporting our E-S4CPE-2405 exam torrent. If you are unfamiliar with our E-S4CPE-2405 Study Materials, please download the E-S4CPE-2405 free demos for your reference, and to some unlearned exam candidates, you can master necessities by our E-S4CPE-2405 practice materials quickly. So our E-S4CPE-2405 materials are elemental materials you cannot miss.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q48-Q53):

NEW QUESTION # 48
Where do you create test cases in SAP Cloud ALM to document formal tests?

- A. Test Preparation app
- B. Test Plan app
- C. Manage Your Test Processes app
- D. Test Execution app

Answer: B

Explanation:
In SAP Cloud ALM, formal test cases are created and managed using the Test Plan app. This application allows users to define, organize, and document test cases systematically.
Option A: Test Plan app
This option is correct. The Test Plan app facilitates the creation and management of test plans, including the documentation of formal test cases.
Option B: Manage Your Test Processes app
This option is incorrect. There is no app by this name in SAP Cloud ALM.
Option C: Test Execution app
This option is incorrect. The Test Execution app is used to execute test cases and record results but is not primarily intended for creating test cases.
Option D: Test Preparation app
This option is incorrect. The Test Preparation app assists in preparing test cases for execution but does not focus on their creation and documentation.
In summary, the Test Plan app in SAP Cloud ALM is the appropriate tool for creating and documenting formal test cases.

NEW QUESTION # 49
Which of the following are captured in a completed Digital Discovery Assessment? Note: There are 2 correct answers to this question.

- A. Business role requirements
- B. Known integration requirements
- C. Target customer go-live date
- D. SAP Fiori application extensions

Answer: B,C

Explanation:
The Digital Discovery Assessment (DDA) is a tool used during the sales cycle (Discover phase of the SAP Activate Methodology) to evaluate a customer's requirements and recommend the best SAP S/4HANA Cloud deployment option-Public or Private Edition. For SAP S/4HANA Cloud Private Edition, the DDA captures detailed information to scope the implementation project. Let's analyze the options:
* A. Business role requirements: While business roles (e.g., authorizations, user roles) are critical for implementation, they are typically defined and configured during the Prepare and Explore phases of the SAP Activate Methodology, not captured in the DDA. The DDA focuses on high-level requirements rather than granular role-specific details. Thus, this is not a correct answer.
* B. Known integration requirements: This is correct. The DDA, especially in the Detailed Discovery phase, collects information about integrations with other SAP Cloud solutions (e.g., SAP SuccessFactors, SAP Ariba) or non-SAP systems that the customer already has or plans to adopt. This is crucial for Private Edition implementations, which often involve complex landscapes requiring extensive integration. SAP documentation confirms that identifying known integration requirements is a key output of the DDA.
* C. Target customer go-live date: This is also correct. The DDA includes project-specific details such as the target go-live date, which helps define the timeline and scope of the implementation. This information is entered during the Detailed Discovery to align expectations and plan resources effectively, as noted in SAP's learning materials.
* D. SAP Fiori application extensions: This is incorrect. While SAP Fiori is integral to SAP S/4HANA Cloud Private Edition for its user interface, the DDA does not specifically capture details about Fiori application extensions. Extensions are typically addressed later in the implementation process (e.g., during the Realize phase) using tools like SAP Business Technology Platform (BTP). The DDA focuses on business processes, integrations, and project parameters rather than UI customizations.
In conclusion, the DDA for SAP S/4HANA Cloud Private Edition capturesB(known integration requirements) andC(target customer go-live date) as key elements to inform the deployment recommendation and project scoping.

NEW QUESTION # 50
You are designing side-by-side extensions in the customer's SAP BTP system. Which extensions can you use?
Note: There are 2 correct answers to this question.

- A. In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition
- B. Classical code-based extensions with SAP Business Application Studio
- C. Tier-3 developer extensions in the ABAP environment
- D. Low/no-code extensions made with SAP Bulld

Answer: A,D

Explanation:
Side-by-side extensions are developed outside the SAP S/4HANA core system, typically on SAP BTP, to extend functionality while maintaining a Clean Core. The question asks which extensions can be used in this context within the customer's SAP BTP system. Let's analyze:
* A. Tier-3 developer extensions in the ABAP environment: This is incorrect. Tier-3 developer extensions refer to complex ABAP customizations within the SAP S/4HANA system (on-stack), not side-by-side on BTP. They are managed in the ABAP environment of S/4HANA, not hosted externally.
* B. Classical code-based extensions with SAP Business Application Studio: This isincorrect. While SAP Business Application Studio (BAS) is used on BTP for coding extensions (e.g., CAP-based apps),
"classical code-based" implies traditional ABAP or SAP GUI extensions, which are not side-by-side or BTP-hosted. Modern BAS extensions align with option D's low/no-code focus.
* C. In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition: This is correct in a nuanced way. While the question specifies side-by-side extensions on BTP, SAP documentation often includes in-app extensions (e.g., via Custom Fields app) as complementary to side-by-side scenarios. These can integrate with BTP-hosted extensions, making them relevant in a hybrid design.

However, strictly speaking, they are on-stack, so this choice reflects SAP's broader extensibility context.

* D. Low/no-code extensions made with SAP Build: This is correct. SAP Build, part of SAP BTP, enables low/no-code development of side-by-side extensions (e.g., custom UIs, workflows) that integrate with SAP S/4HANA Cloud Private Edition. It's a key tool for citizen developers to create BTP-hosted extensions, aligning perfectly with the side-by-side approach.

In summary, C (In-app/on-stack extensions in SAP S/4HANA Cloud Private Edition) and D (Low/no-code extensions made with SAP Build) are usable extensions, with D being the clearest side-by-side fit and C reflecting a complementary integration possibility.

Note: If strictly interpreted, D and a BAS-based coding option would be ideal, but C aligns with SAP's broader intent.

NEW QUESTION # 51

Which of the following are formal tests, and therefore must be documented? Note: There are 2 correct answers to this question.

- A. Integration tests
- B. Unit tests
- C. String tests
- D. Business process tests

Answer: A,D

Explanation:

In SAP S/4HANA Cloud Private Edition, formal tests that must be documented include:

Option A: Unit tests

This option is incorrect. Unit tests are typically conducted by developers during the development phase and may not require formal documentation.

Option B: Integration tests

This option is correct. Integration tests assess the interaction between different system components and are formal tests that require documentation.

Option C: String tests

This option is incorrect. String tests are informal and focus on specific sequences of functions, often

NEW QUESTION # 52

What are some activities you can use the SAP S/4HANA Fully Activated Appliance for? Note: There are 3 correct answers to this question.

- A. To test customizations prior to transporting to the quality system
- B. To deploy a preconfigured landscape for exploration
- C. To transfer configurations to the productive landscape
- D. To deliver Fit-to-Standard workshops in a new implementation scenario
- E. To deliver Fit-to-Standard workshops in a system conversion scenario

Answer: A,B,D

NEW QUESTION # 53

......

If you intend to take the SAP E-S4CPE-2405 exam to open doors to high-paying jobs, you need an authentic SAP E-S4CPE-2405 practice exam material to get a passing score on the first attempt. Many people do not find a platform that is credible to purchase updated SAP E-S4CPE-2405 prep material. This leads to a waste of time and money, and ultimately failure in the E-S4CPE-2405 exam.
