Note: There are 2 correct answers to this question.

- A. Partner function
- B. Freight order type
- C. Freight unit type

- D. Business function

**Answer: A,B**

Explanation:  
Master Data

### NEW QUESTION # 30

You define an incompatibility to prevent two products from being shipped together. Which incompatibility validity area will you use?

- **A. Freight Unit Building**
- B. Delivery Proposal
- C. Automatic Planning and Manual Planning
- D. Carrier Selection

**Answer: A**

Explanation:

In SAP S/4HANA Transportation Management, incompatibilities are used to enforce restrictions, such as preventing two products from being shipped together due to safety or regulatory reasons. According to the SAP documentation, the Freight Unit Building (A) validity area is used to define incompatibilities that prevent specific products from being combined into the same freight unit during the freight unit creation process. This ensures that incompatible products are separated into different freight units from the outset, avoiding issues during planning or execution.

The other options are incorrect:

\* Automatic and Manual Planning (B) is used for incompatibilities during planning (e.g., vehicle or route restrictions), not product combination.

\* Carrier Selection (C) applies to carrier-related restrictions, not product incompatibilities.

\* Delivery Proposal (D) is used for delivery-level restrictions but is less relevant than freight unit building for product-specific incompatibilities.
