The third format is desktop 300-445 practice exam software that can be accessed easily after installing it on your Windows PC or Laptop. These formats are there so that the students can use them as per their unique needs and prepare successfully for 300-445 the on first try. The 300-445 mock tests are specially built for you to evaluate what you have studied. These Designing and Implementing Enterprise Network Assurance (300-445) practice exams (desktop and web-based) are customizable, which means that you can change the time and questions according to your needs. Our 300-445 practice tests teach you time management so you can pass the Designing and Implementing Enterprise Network Assurance (300-445) certification exam.

Cisco 300-445 Exam Syllabus Topics:

Topic	Details
Topic 1	Insights and Alerts: This domain addresses configuring alert rules based on network conditions and end-user experience factors. It covers selecting metrics for stakeholders, validating alerts, and recommending network optimization for capacity planning.
Topic 2	Platforms and Architecture: This domain covers understanding monitoring agent types and placement, active versus passive monitoring, and ThousandEyes WAN Insights. It addresses Cisco platform integrations, metric baselines, and selecting appropriate integration methods and assurance platforms based on business requirements.
Topic 3	Data Collection Implementation: This domain focuses on deploying enterprise and endpoint agents across infrastructure and end-user devices. It covers configuring network, DNS, voice, web, and endpoint tests using ThousandEyes and Meraki Insights, along with implementing synthetic web tests and authentication methods.
Topic 4	Data Analysis: This domain encompasses diagnosing network issues like packet loss, congestion, routing, and jitter, plus end-device problems. It includes analyzing web application performance and identifying security threats such as DDoS attacks, DNS hijacking, and BGP hijacking.

Expertly Crafted Online Cisco 300-445 Practice Test Engine

It is acknowledged that there are numerous 300-445 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for 300-445 practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. With our 300-445 Exam Questions, you will pass your exam just in one go for we are the most professional team in this career for over ten years.

Cisco Designing and Implementing Enterprise Network Assurance Sample

Questions (Q26-Q31):

NEW QUESTION # 26

A network engineer deploys a ThousandEyes Docker agent on a switch using app-hosting. The agent needs to communicate through a proxy server, but this configuration was missed during the initial deployment. The engineer adds the proxy settings to the app-hosting configuration. What is the next step to ensure the agent uses the proxy and appears online in the ThousandEyes portal?

- A. Restart the container using `app-hosting stop appid agentname` followed by `app-hosting start appid agentname`
- B. Execute the full agent lifecycle: `app-hosting stop appid agentname`, `app-hosting deactivate appid agentname`, `app-hosting activate appid agentname`, `app-hosting start appid agentname`
- C. No action required; the agent will pick up the configuration automatically
- D. Reinstall the agent using the `app-hosting install` command with the correct proxy settings

Answer: B

NEW QUESTION # 27

Refer to the exhibits.

The endpoint has the following IP credentials:

192.168.100.9/24, DNS: 8.8.8.8, 8.8.4.4, GW: 192.168.100.1

Based on the views presented in the exhibits, what led to the error occurring on Sun, May 5 23:27 GMT+2?

- A. The FQDN of the test target is non-existent.
- B. The DNS settings on the endpoint are incorrect.
- C. The test target stopped responding.
- **D. The DNS servers assigned to the endpoint are unreachable.**

Answer: D

NEW QUESTION # 28

You are investigating intermittent failures in a ThousandEyes transaction test targeting a web application that uses Basic Authentication. The failures occur randomly across different agents and times of day. What steps would you take to troubleshoot and resolve the issue? (Select all that apply)

- **A. Verify the correctness of credentials by manually logging into the application from different locations.**
- **B. Contact the web application vendor to report the issue and inquire about possible server-side problems.**
- C. Disable Basic Authentication in the test configuration to isolate the problem.

- **D. Analyze the ThousandEyes waterfall charts and HTTP response codes to identify potential bottlenecks or errors.**

Answer: A,B,D

Explanation:

Troubleshooting intermittent performance issues is a core component of the Designing and Implementing Enterprise Network Assurance (300-445 ENNA) curriculum. When a transaction test using Basic Authentication fails randomly, the engineer must employ a multi-layered diagnostic approach to determine if the fault lies with the credentials, the network path, or the application server.

The first step is to verify the correctness of credentials (Option B). Because Basic Authentication encodes credentials in the header, any change in user permissions or account lockouts will trigger immediate failures.

Performing manual logins from various geographical locations helps rule out location-based access control lists (ACLs) or regional IdP sync issues.

The most data-rich diagnostic step is to analyze the ThousandEyes waterfall charts and HTTP response codes (Option C). The waterfall view allows the engineer to see if the failure happens during the initial 401 Unauthorized challenge or after the credentials are sent. If the charts show high "Wait Time" or 5xx errors, the issue is likely server-side latency or instability. If the "Connect Time" is high, the problem may be network-layer congestion.

Finally, if the telemetry indicates that the network path is healthy but the server is intermittently returning errors or timing out, the engineer should contact the web application vendor (Option D). Providing the vendor with the specific ThousandEyes "Share Link" allows them to see the exact same packet-level and browser-level data, proving that the issue is not with the client's network but with the server-side infrastructure. Disabling authentication (Option A) is not a valid troubleshooting step for a test designed specifically to monitor an authenticated workflow.

NEW QUESTION # 29

What capability does Thousand Eyes WAN Insights offer for analyzing network traffic patterns?

- A. Server virtualization
- B. Network segmentation
- C. Predictive analytics
- **D. Real-time packet capture**

Answer: D

Explanation:

WAN Insights offers real-time packet capture capabilities for analyzing network traffic patterns and identifying performance bottlenecks.

NEW QUESTION # 30

What is the first step in setting a metric baseline for network performance monitoring?

- A. Establishing performance thresholds
- B. Analyzing network traffic
- **C. Defining key performance indicators**
- D. Collecting historical data

Answer: C

Explanation:

The first step in setting a metric baseline is defining key performance indicators (KPIs) to measure and monitor network performance in network assurance.

NEW QUESTION # 31

.....

With limited time for your preparation, many exam candidates can speed up your pace of making progress. Our 300-445 practice materials will remedy your faults of knowledge understanding. Many customers get manifest improvement and lighten their load. As we know, some people failed the exam before, and lost confidence in this agonizing exam before purchasing 300-445 Training Materials. We are here divide grieves with you. You can abandon the time-consuming thought from now on. In contrast, they will

inspire your potential without obscure content to feel. After getting our 300-445 exam prep, you will not live under great stress during the exam period.
