2026 SOL-C01 Reliable Exam Labs | Pass-Sure SOL-C01 Dump Check: Snowflake Certified SnowPro Associate - Platform Certification

If you don't have enough time to study for your Snowflake Snowflake Certified SnowPro Associate - Platform Certification exam, PracticeMaterial provides Snowflake SOL-C01 Pdf questions. You may quickly download Snowflake SOL-C01 exam questions in PDF format on your smartphone, tablet, or desktop. You can Print Snowflake SOL-C01 pdf questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go. Snowflake evolves swiftly, and a practice test may become obsolete within weeks of its publication. We provide free updates for Snowflake SOL-C01 Exam Questions for three months after the purchase to ensure you are studying the most recent Snowflake solutions.

If you want to make one thing perfect and professional, then the first step is that you have to find the people who are good at them. In this SOL-C01 exam braindumps field, our experts are the core value and truly helpful with the greatest skills. So our SOL-C01 practice materials are perfect paragon in this industry full of elucidating content for exam candidates of various degrees to use for reference. Just come to buy our SOL-C01 study guide!

SOL-C01 Dump Check, SOL-C01 Exam Paper Pdf

It is a common sense that only high quality and accuracy SOL-C01 training prep can relive you from those worries. It is our communal wish to reap successful fruits. So our company did a lot to make sure that happen. Our SOL-C01 learning quiz compiled by the most professional experts can offer you with high quality and accuracy results for your success. And we can claim that if you study with our SOL-C01 Exam Braindumps for 20 to 30 hours, you will pass the exam for sure.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q87-Q92):

NEW QUESTION # 87
In a Snowflake Notebook, you're attempting to read data from a Snowflake table named
'CUSTOMER DATA into a Pandas DataFrame for further analysis. The table contains a column named of data type TIMESTAMP NTZ. Which of the following Python code snippets will successfully read the data and preserve the 'CREATED_AT column as a datetime object in the DataFrame?

- A. Option A
- B. Option E
- C. Option B
- D. Option D
- E. Option C

Answer: A,D

Explanation:
Options A and D are the most efficient and correct. automatically handles the conversion of Snowflake TIMESTAMP NTZ to Pandas datetime objects. Option D `pd.read_sqr using the connection context is also good , which handles the conversion automatically as well. Option B fetches the data as tuples, requiring manual column naming and datetime conversion, and it is inefficient. Option C requires to work correctly. Option E cast timestamp column explicitly and defeats purpose.

NEW QUESTION # 88
What is the Snowsight Query Profile used for?

- A. To manage data loading processes
- B. To visualize and analyze query performance
- C. To create new database objects
- D. To execute SQL queries

Answer: B

Explanation:
The Snowsight Query Profile is a powerful diagnostic tool that provides a visual breakdown of how Snowflake executed a query. Its primary purpose is to help users visualize and analyze query performance. It displays execution steps, including scan operations, join strategies, pruning results, aggregation methods, and data movement between processing nodes.
The profile shows metrics such as execution time per step, partition pruning effectiveness, bytes scanned, and operator relationships. This allows developers, analysts, and DBAs to identify bottlenecks-such as unnecessary full-table scans, non-selective filters, or inefficient joins-and tune SQL accordingly.
Query Profile does not execute queries; execution happens in worksheets or programmatic interfaces. It does not create objects or manage data loading; those tasks involve separate SQL commands and UI interfaces.
Overall, Query Profile is essential for performance tuning, helping teams reduce compute costs, optimize warehouse sizing, and improve query efficiency.

NEW QUESTION # 89
You are tasked with creating a Snowflake Notebook that reads data from an external stage (AWS S3), transforms it using Python, and then loads the transformed data into a Snowflake table. The external stage requires authentication using AWS IAM roles. Which of the following steps are necessary to configure the connection and access the data from the external stage within your Snowflake Notebook using Python? (Choose all that apply.)

- A. Use the AWS SDK for Python (bot03) within the Snowflake Notebook to assume the IAM role and access the S3 bucket directly.
- B. Create a Snowflake external table that points to the S3 bucket and uses the storage integration.
- C. Grant the necessary privileges (e.g., USAGE, READ) on the storage integration object to the Snowflake role used by the Notebook session.
- D. Create a Snowflake storage integration object that defines the AWS IAM role ARN and the S3 bucket URL.
- E. Configure the AWS IAM role to trust the Snowflake account and grant it access to the S3 bucket.

Answer: B,C,D,E

Explanation:
Options A, B, C, and E are essential. To access data in an external stage secured with IAM roles, you need a Snowflake storage integration object (A) that defines the connection to S3. You must grant privileges on this integration to the appropriate Snowflake role (B). The IAM role must be configured to trust Snowflake (C). Finally, you typically create an external table (E) that uses the storage integration to access the data in S3. Using bot03 directly (D) is generally not necessary and bypasses Snowflake's security and governance mechanisms for accessing external stages.

NEW QUESTION # 90

A data engineer needs to transfer ownership of a database named 'SALES DATA' to a role named 'DATA GOVERNANCE The engineer attempts to use the following command: 'GRANT OWNERSHIP ON DATABASE SALES DATA TO ROLE DATA GOVERNANCE. However, this command fails. What is the MOST likely reason for the failure?

- A. The `SALES DATA database contains shared data; ownership cannot be transferred in such cases.
- B. The `DATA GOVERNANCE role does not have the 'OWNERSHIP' privilege on the 'SALES DATA' database.
- C. The correct syntax is 'ALTER DATABASE SALES_DATA OWNER TO ROLE DATA_GOVERNANCE.
- D. Ownership can only be transferred to users, not roles.
- E. The role executing the command does not have the 'OWNERSHIP' privilege on the `SALES DATA database.

Answer: E

Explanation:
The `GRANT OWNERSHIP command requires that the role executing the command currently owns the object (database in this case). If the role executing the command doesn't have the
`OWNERSHIP privilege, it cannot transfer ownership to another role. Options A, B, D and E are incorrect because the problem is about the role which is executing the command.

NEW QUESTION # 91

In the Query Profile, what does the Pruning section provide?

- A. Information on how Snowflake removed objects from the query plan.
- B. Information on how Snowflake removed micro-partitions from the query scan.
- C. Information on how Snowflake removed columns from the query results.
- D. Information on how Snowflake removed rows from the query results.

Answer: B

Explanation:
The Pruning section of the Snowsight Query Profile showshow Snowflake eliminated unnecessary micro- partitions from the scan phaseof the query. Snowflake stores data in micro-partitions and maintains metadata such as min/max values for each column within each partition. When a query includes filters (e.g., WHERE clauses), Snowflake evaluates this metadata to determine which micro-partitions cannot possibly satisfy the predicate. These partitions are skipped, meaning they are never scanned or read from storage. This process drastically improves performance because Snowflake minimizes I/O, reduces compute usage, and shortens execution time. Partition pruning is especially impactful on large tables because only a fraction of the stored micro-partitions typically need to be accessed.
The Pruning section does not show removedrows-that happens during the filter step. It does not show removedcolumns-column pruning is handled separately by the optimizer. It also does not show removedobjectsfrom the plan. Its sole purpose is to document micro-partition elimination and scan reduction.
