Just like the old saying goes: "Practice is the only standard to testify truth", which means learning of theory ultimately serves practical application, in the same way, it is a matter of common sense that pass rate of a kind of EMEA-Advanced-Support exam torrent is the only standard to testify weather it is effective and useful. The team of the experts in our company has an in-depth understanding

of the fundamental elements that combine to produce world class EMEA-Advanced-Support Guide Torrent for our customers. This expertise coupled with our comprehensive design criteria and development resources combine to create definitive EMEA-Advanced-Support exam torrent.

## Fortinet EMEA Advanced Support Exam Sample Questions (Q13-Q18):

### NEW QUESTION # 13

What are the advantages of using a hub-and-spoke IPSec VPN configuration instead of a fully-meshed set of IPSec tunnels? (Select all that apply below)

- A. Using a hub and spoke topology provides stronger encryption.
- B. Using a hub and spoke topology is required to achieve full redundancy.
- C. The routing table management is simpler because of fewer routes compared to a fully meshed node.
- D. Using a hub and spoke topology simplifies configuration because fewer tunnels are required.

**Answer: C,D**

Explanation:

Hub-and-spoke IPsec VPN reduces the number of tunnels needed (one per spoke to hub instead of  $n(n-1)/2$  in full mesh), simplifying configuration and routing tables with summarized routes at the hub. It does not inherently provide stronger encryption or require for redundancy (though can be made redundant). Exact extract: I want to have a way to quickly (preferably automated) setup VPN's to my 2 hubs from each spoke.

However we do not want/need VPNs between spokes. Hub Configuration: Configure the FortiGate unit as the hub. Set up IPsec VPN tunnels for each spoke. Use preshared keys for authentication. The purpose of this document is to describe the requirements and general information for building a Hub & Spoke architecture using FortiGate-VM on Oracle Cloud ... The remote sites do not need to have connectivity to each other nor does the customer want them to have connectivity to each other. Given these ... This article gives a brief configuration example from one spoke to other spoke using IPsec, through the Hub firewall.

### NEW QUESTION # 14

Which command would you use to verify the status of an IPsec VPN tunnel on a FortiGate?

- A. diagnose vpn tunnel list
- B. show crypto ipsec sa
- C. diagnose ipsec status
- D. get vpn ipsec status

**Answer: A**

Explanation:

The 'diagnose vpn tunnel list' command on FortiGate displays detailed status information about IPsec VPN tunnels, including phase 1 and phase 2 states, uptime, and traffic statistics. Options B, C, and D are not valid FortiGate commands for this purpose. Exact extract: "Use diagnose vpn tunnel list to view the status of IPsec VPN tunnels, including phase 1 and phase 2 details, such as SA status, uptime, and traffic counters."

### NEW QUESTION # 15

What does the FortiGate 'set nat enable' command do in a firewall policy?

- A. Enables NAT for outgoing traffic
- B. Forces NAT to use a specific IP pool
- C. Enables NAT for incoming traffic only
- D. Disables NAT for the policy

**Answer: A**

Explanation:

The 'set nat enable' command in a FortiGate firewall policy enables Source NAT (SNAT) for outgoing traffic, typically rewriting the source IP to the FortiGate's interface IP or an IP pool. It does not disable NAT (B), force a specific pool (C), or limit to incoming traffic (D). Exact extract: "The 'set nat enable' command in a firewall policy enables Source NAT, rewriting the source IP address of outgoing traffic to the egress interface IP or a configured NAT pool."

### NEW QUESTION # 16

Which of the following Authentication protocols uses clear text?

- A. PAP
- B. MSCHAP
- C. EAP
- D. CHAP

**Answer: A**

Explanation:

PAP (Password Authentication Protocol) sends username and password in clear text over the network, making it insecure. CHAP uses challenge-response with hash, MSCHAP is Microsoft variant with hash, EAP is extensible and can use various methods but not inherently clear text. Exact extract: It's "impossible" to authenticate wireless users based on EAP-PEAP sessions against OpenLdap, except, if the users using clear text authentication methods (PAP). Clear text HTTP authentication is not secure. All user names and data (and, depending on the authentication style, passwords) are sent in clear text. If you ... Fortinet ... Password Authentication Protocol (PAP). Used to authenticate PPP connections. Transmits passwords and other user information in clear text. The default token page contains a "Token Code:" text field. Recommended customization. It's recommended to delete the "Token Code:" text. FortiWeb will use ... If you follow the configuration guide for NPS you'll see (step 9) you need to enable "Unencrypted authentication (PAP, SPAP)" (link below).

### NEW QUESTION # 17

Link aggregation allows network devices to \_\_\_\_\_

- A. Increase bandwidth by binding physical interfaces into a single channel
- B. None of the above
- C. Increase bandwidth of an interface
- D. Restrict the bandwidth

**Answer: A**

Explanation:

Link aggregation, also known as IEEE 802.3ad or 802.1ax, enables the binding of multiple physical interfaces to form a single logical interface, which increases the overall bandwidth and provides redundancy. This is achieved by combining the bandwidth of the individual links into one aggregated link. For example, if two 1Gbps interfaces are aggregated, the logical link can provide up to 2Gbps bandwidth. This configuration is commonly used in FortiGate devices to enhance network performance without replacing hardware. The option B correctly describes this by stating "Increase bandwidth by binding physical interfaces into a single channel," which aligns with the official description. Incorrect options include A, which is vague and does not specify the method of binding multiple interfaces; C, which is the opposite of the purpose; and D, which is invalid.

Exact extract: Link aggregation (IEEE 802.3ad/802.1ax) enables you to bind two or more physical interfaces together to form an aggregated (combined) link. This new link ... Link aggregation combines multiple physical interfaces into a single logical interface, increasing bandwidth and link redundancy. Traffic is distributed evenly.
