100% Pass Salesforce - Newest Exam Mule-Dev-301 Topics

In order to pass Salesforce certification Mule-Dev-301 exam, selecting the appropriate training tools is very necessary. And professional study materials about Salesforce certification Mule-Dev-301 exam is a very important part. Our Itcertmaster can have a good and quick provide of professional study materials about Salesforce Certification Mule-Dev-301 Exam. Our Itcertmaster IT experts are very experienced and their study materials are very close to the actual exam questions, almost the same. Itcertmaster is a convenient website specifically for people who want to take the certification exams, which can effectively help the candidates to pass the exam.

Salesforce Certified MuleSoft Developer II Sample Questions (Q24-Q29):

NEW QUESTION # 24

What is the MuleSoft recommended method to encrypt sensitive property data?

- A. The encryption key should be identical for all environments and the sensitive data should be different for each environment
- B. The encryption key should be identical for all environments
- C. The encryption key should be different for each environment and the sensitive data should be the same for all environments
- **D. The encryption key and sensitive data should be different for each environment**

Answer: D

Explanation:

The MuleSoft recommended method to encrypt sensitive property data is to use the Secure Properties Tool that comes with Anypoint Studio. This tool allows encrypting properties files with a secret key and then decrypting them at runtime using the same key. The encryption key and sensitive data should be different for each environment to ensure security and avoid accidental exposure of sensitive data. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/secure-configuration-properties>

NEW QUESTION # 25

A scatter-gather router is configured with four routes:Route A, B, C and D.
Route C false.

- A. Payload ['2']
- **B. Error,errorMessage.payload.results ['2']**
- C. Error,errorMessage.payload.failures['2']
- D. Payload failures['2']

Answer: B

Explanation:

The result of accessing route C failure is Error,errorMessage.payload.failures['2']. This is because a scatter-gather router returns an aggregated message that contains an array of results from each route and an array of failures from each route. The failures array contains error objects with information about each failed route execution. To access route C failure, which is the third route (index 2), the developer needs to use Error.errorMessage.payload.failures['2'] expression. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-reference#scatter-gather-output>

NEW QUESTION # 26

A healthcare portal needs to validate the token that it sends to a Mule API. The developer plans to implement a custom policy using the HTTP Policy Transform Extension to match the token received in the header from the healthcare portal.
Which files does the developer need to create in order to package the custom policy?

- **A. XML template file, YAML configuration file**
- B. JSON properties file, YAML configuration file
- C. Deployable ZIP file, YAML configuration file
- D. JSON properties file, XML template file

Answer: A

Explanation:

To package a custom policy using the HTTP Policy Transform Extension, the developer needs to create an XML template file and a YAML configuration file. The XML template file defines the policy logic using Mule components and placeholders for user-defined properties. The YAML configuration file defines the metadata of the policy, such as its name, description, category, parameters, and dependencies. Reference: <https://docs.mulesoft.com/api-manager/2.x/http-policy-transform#packaging-the-policy>

NEW QUESTION # 27

Which command is used to convert a JKS keystore to PKCS12?

- A. Keytool-importkeystore -srckeystore keystore jks-srcstoretype JKS -destkeystore keystore.p13 -deststoretype PKCS12
- B. Keytool-importkeystore -srckeystore keystore jks-srcstoretype PKCS12 -destkeystore keystore.p12 -deststoretype JKS

- C. `keytool-importkeystore -srckeystore keystore.p12 -srcstoretype PKCS12 -destkeystore keystore.jks -deststoretype JKS`
- D. `keytool-importkeystore -srckeystore keystore.p12 -srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12`

Answer: D

Explanation:

To convert a JKS keystore to PKCS12, the developer needs to use the `keytool-importkeystore` command with the following options: `-srckeystore keystore.jks -srcstoretype JKS -destkeystore keystore.p12 -deststoretype PKCS12`. This command imports all entries from a source JKS keystore (`keystore.jks`) into a destination PKCS12 keystore (`keystore.p12`). Reference: <https://docs.oracle.com/en/java/javase/11/tools/keytool.html#GUID-5990A2E4-78E3-47B7-AE75-6D1826259549>

NEW QUESTION # 28

When implementing a synchronous API where the event source is an HTTP Listener, a developer needs to return the same correlation ID back to the caller in the HTTP response header.

How can this be achieved?

- A. Configure a custom correlation policy
- B. Enable the CorrelationID checkbox in the HTTP Listener configuration
- C. **NO action is needed as the correlation ID is returned to the caller in the response header by default**
- D. Enable the auto-generate CorrelationID option when scaffolding the flow

Answer: C

Explanation:

When implementing a synchronous API where the event source is an HTTP Listener, Mule automatically propagates some message attributes between flows via outbound and inbound properties. One of these attributes is correlation ID, which is returned to the caller in the response header by default as `MULE_CORRELATION_ID`. Reference: <https://docs.mulesoft.com/mule-runtime/4.3/about-mule-message#message-attributes>

NEW QUESTION # 29

.....

Our ITCertmaster website try our best for the majority of examinees to provide the best and most convenient service.
