

# Quiz High-quality Esri - EAEP2201 Reliable Test Notes

BONUS!!! Download part of Dupleader EAEP2201 dumps for free: [https://drive.google.com/open?id=1WnBucw1GK68dfUpd6-sSpR\\_MEgp60I6J](https://drive.google.com/open?id=1WnBucw1GK68dfUpd6-sSpR_MEgp60I6J)

EAEP2201 is the authentic study guides with the latest exam material which can help you solve all the difficulties in the actual test. Our EAEP2201 free demo is available for all of you. You will receive an email attached with the EAEP2201 training dumps within 5-10 minutes after completing purchase. Immediately download for the EAEP2201 study pdf is available for study with no time wasted. We have money refund policy to ensure your interest in case the failure of EAEP2201 actual test.

To prepare for the exam, candidates can take advantage of Esri's training courses, workshops, and webinars, as well as practice tests and study guides. Passing the EAEP2201 Exam is a significant accomplishment that demonstrates an individual's expertise and proficiency in ArcGIS Enterprise administration, and can lead to career advancement and new job opportunities.

## 100% Pass Reliable Esri - EAEP2201 - Enterprise Administration Professional 2201 Reliable Test Notes

Our EAEP2201 exam training' developers to stand in the perspective of candidate, fully consider their material basis and actual levels of knowledge, formulated a series of scientific and reasonable learning mode, meet the conditions for each user to tailor their learning materials. What's more, our EAEP2201 guide questions are cheap and cheap, and we buy more and deliver more. The more customers we buy, the bigger the discount will be. In order to make the user a better experience to the superiority of our EAEP2201 Actual Exam guide, we also provide considerate service, users have any questions related to our study materials, can get the help of our staff in a timely manner.

Esri EAEP2201 Certification Exam consists of 60 multiple-choice questions and is administered online. Candidates are given two hours to complete the exam and must achieve a passing score of 70% or higher to receive certification. EAEP2201 Exam covers a range of topics, including ArcGIS Enterprise architecture, security and authentication, data management, and server performance tuning.

## Esri Enterprise Administration Professional 2201 Sample Questions (Q34-Q39):

### NEW QUESTION # 34

An administrator needs to share content with a specific group of users. The administrator is concerned that several important applications will stop working for the users if they leave the group.

Which action should the administrator perform to prevent users from leaving the group?

- A. Change the role of the users
- **B. Create an administrative group**
- C. Create a group visible only to group members

**Answer: B**

Explanation:

In ArcGIS Enterprise, when creating a new group, administrators have the option to designate it as an Administrative Group. This designation restricts members from leaving the group voluntarily; only the group owner or a group manager can remove members. This ensures that critical applications and content shared within the group remain accessible to all intended users, preventing disruptions caused by users inadvertently or intentionally leaving the group.

It's important to note that this setting can only be applied during the creation of a new group and cannot be modified later.

Reference Source: ArcGIS Enterprise documentation on creating administrative groups

### NEW QUESTION # 35

A GIS analyst is working with referenced data and needs to offload a large dataset of millions of oil rig locations from the geodatabase. The data must be quickly accessible for spatial visualization and queryable within ArcGIS Enterprise.

Which ArcGIS Data Store type should be configured?

- A. External big data file share
- B. Tile cache
- **C. Spatiotemporal**
- D. Relational

**Answer: C**

Explanation:

The Spatiotemporal big data store is designed for massive datasets and optimized for high-speed visualization, time-enabled querying, and big data analytics. It is ideal for storing millions of point features such as sensors or oil rig locations, especially when performance and scalability are critical.

From ArcGIS documentation:

"The spatiotemporal big data store is designed for writing and querying large volumes of spatial and temporal data. It's optimized for visualizing high-density datasets in web maps."

\* Option B (Relational) works for moderate data volumes but may not scale well.

\* Option C supports cached tiles, not dynamic feature access.

Reference: ArcGIS Enterprise - Choosing the Right Data Store Type for Large Datasets

### NEW QUESTION # 36

A GIS administrator receives reports of slow-performing services and notices that disk space is filling up after recent troubleshooting sessions.

In those sessions, the following tasks were performed:

- \* Services added to the shared instance pool
- \* Log retention settings reduced
- \* Log level set to Debug
- \* ArcGIS Server machine restarted
- \* An additional ArcGIS Server site federated

What is causing this slow performance?

- A. Federating the additional ArcGIS Server site
- B. Restarting ArcGIS Server

- C. Additional services in the shared instance pool
- **D. Adjusting the log level to Debug**

**Answer: D**

Explanation:

Setting the log level to Debug can significantly impact performance and disk space. Debug-level logging writes detailed information about every process and service request to log files, which can rapidly fill up disk space and consume server resources, leading to performance degradation.

From ArcGIS Server documentation:

"The debug log level is used only for troubleshooting specific problems and should not be used in a production environment as it can negatively affect performance and result in excessive disk space usage."

\* Option A is partially valid, but shared instance pooling is designed for efficient resource use and generally improves performance when used properly.

\* Option C is unrelated to performance directly unless misconfigured.

\* Option D (restart) is typically neutral or helpful.

Reference: ArcGIS Server - Logging Levels and Performance Considerations

### NEW QUESTION # 37

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Use service defaults for publishing
- B. Enable cached drawing mode
- **C. Increase the max record count**
- D. Adjust pooling to handle the request

**Answer: C**

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000).

To allow all 2,400 features to be returned in one call, the administrator needs to increase the "Maximum number of records returned by the server" (maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

\* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.

\* Option C would keep the default setting of 1,000, which would not meet the requirement.

\* Option D relates to visual performance, not record retrieval.

Reference: ArcGIS Server - Feature Service Settings and Tuning for Performance

### NEW QUESTION # 38

An organization publishes a map image layer to ArcGIS Enterprise that references data from a user-managed PostgreSQL geodatabase.

The schema of a table is updated to add a field, but the map service cannot be stopped due to a Service Level Agreement (SLA). Schema locking is disabled.

Even after restarting the map service and database, the new field is not shown in the REST endpoint.

Which action should the administrator perform?

- **A. Republish the map service by overwriting the original**
- B. Re-enable schema locking for the map service
- C. Clear the enterprise geodatabase cache
- D. Ensure that the field is made visible by default in the ArcGIS Enterprise portal

**Answer: A**

Explanation:

Map image layers (map services) do not automatically detect schema changes, especially in registered enterprise geodatabases. Even

with schema locking disabled, services cache the original schema at the time of publishing. To reflect the new field, you must overwrite the existing service.

From ArcGIS Server documentation:

"If the schema of a dataset is changed after a service is published (such as adding a field), the change is not automatically reflected in the service. You must overwrite the service or republish the map to reflect schema updates."

\* OptionB is not applicable; field visibility in the portal reflects what's in the published service definition.

\* OptionC is related to editing access, not field visibility.

\* OptionD is not a valid administrative action in this context.
