問題 #210
When a host is placed in Network Containment, which of the following is TRUE?

- A. The host machine is unable to send or receive network traffic outside of the local network
- B. The host machine is unable to send or receive network traffic except to/from the Falcon Cloud and traffic allowed in the Firewall Policy
- C. The host machine is unable to send or receive any network traffic
- D. The host machine is unable to send or receive network traffic except to/from the Falcon Cloud and any resources allowlisted in the Containment Policy

答案：D

解題說明：
When a host is placed in Network Containment, the host machine is unable to send or receive network traffic except to/from the Falcon Cloud and any resources allowlisted in the Containment Policy. This allows users to isolate a host from the network, while still allowing it to communicate with the Falcon Cloud and other essential services. The other options are either incorrect or not true of Network Containment.

問題 #211

Why do Sensor Update policies need to be configured for each OS (Windows, Mac, Linux)?

- A. Sensor Update policies are OS dependent
- B. To assist with auditing and change management
- C. This is false. One policy can be applied to all Operating Systems
- D. To bundle the Sensor and Prevention policies together into a deployment package

答案：A

解題說明：
Sensor Update policies need to be configured for each OS (Windows, Mac, Linux) because Sensor Update policies are OS dependent. A Sensor Update policy is a policy that controls how and when the Falcon sensor is updated on a host. Sensor Update policies are specific to each operating system type, as different operating systems have different sensor versions, features, and requirements. Therefore, you need to create and assign separate Sensor Update policies for each operating system type in your environment.

問題 #212

What model is used to create workflows that would allow you to create custom notifications based on particular events which occur in the Falcon platform?

- A. For - While statement(s)
- B. Trigger, condition(s) and action(s)
- C. Event trigger(s)
- D. Predefined workflow template(s)

答案：B

解題說明：
The model that is used to create workflows that would allow you to create custom notifications based on particular events which occur in the Falcon platform is trigger, condition(s) and action(s). This model allows you to specify what event will trigger the workflow, what condition(s) must be met for the workflow to execute, and what action(s) will be performed by the workflow. The other options are either incorrect or not related to creating workflows.

問題 #213

Which role is required to manage groups and policies in Falcon?

- A. Falcon Host Analyst
- B. Prevention Hashes Manager
- C. Falcon Host Administrator
- D. Falcon Host Security Lead

答案：C

解題說明：
The Falcon Host Administrator role is required to manage groups and policies in Falcon. This role allows users to create, edit and delete groups and policies, as well as assign them to hosts. The other roles do not have this capability. Reference: [CrowdStrike Falcon User Guide], page 17.

問題 #214

Which of the following is a valid step when troubleshooting sensor installation failure?

- A. Delete any available application crash log files
- B. Confirm all required services are running on the system
- C. Disable SSL and TLS on the host
- D. Enable the Windows firewall

答案：B

解題說明：

A valid step when troubleshooting sensor installation failure is to confirm all required services are running on the system. This can help identify if there are any issues with the sensor service, the Windows Management Instrumentation service, or the Windows Remote Management service, which are required for the sensor to function properly. The other options are either incorrect or not helpful for troubleshooting sensor installation failure.
