Answer: B

NEW QUESTION # 15

The following view of a timesheet application an employee enters their hours for the week The total hours highlighted are automatically updated with the appropriate values as the fee enters their time.

The employee submits the timesheet. the following view is shown. The application reduces the vacation and sick time balances by the hours entered in the previous view.

Answer:

Explanation:

Explanation:

Field: Total hours for each type of time tracked (work, vacation, sick) Method: Calculation Field: Cumulative total of all hours for the week Method: Calculation Field: Updated vacation and sick time balances Method: Data transform

* Total hours for each type of time tracked (work, vacation, sick)

* Method: Calculation

* Explanation: The total hours for each type of time (work, vacation, sick) are derived by summing up the respective hours entered by the employee for each day. This involves simple arithmetic operations which are best handled by a calculation rule in Pega.

* Pega Platform Business Architect Essentials, Chapter on Calculations and Decision Rules.

Cumulative total of all hours for the week

Method: Calculation

Explanation: The cumulative total of all hours for the week is computed by summing up the total hours of work, vacation, and sick time. This is another straightforward arithmetic operation that should be implemented using a calculation rule.

Reference: Pega Platform Business Architect Essentials, Chapter on Calculations and Decision Rules.

Updated vacation and sick time balances

Method: Data transform

Explanation: When the employee submits the timesheet, the application needs to update the vacation and sick time balances by subtracting the entered hours from the available balances. This involves data manipulation which is appropriately handled using a data transform. Data transforms in Pega are used to copy and manipulate data.

Reference: Pega Platform Business Architect Essentials, Chapter on Data Transforms and Activities.
