

# 2026 Latest JN0-105 Exam Preparation | Updated 100% Free JN0-105 Accurate Prep Material

DOWNLOAD the newest Prep4SureReview JN0-105 PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1XopkzKID9jnIEioNuBPvuGf\\_zOOCtsFe](https://drive.google.com/open?id=1XopkzKID9jnIEioNuBPvuGf_zOOCtsFe)

The clients can download our products and use our JN0-105 study materials immediately after they pay successfully with their credit cards. Our system will send our JN0-105 learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our JN0-105 Guide materials. If there are something they can't understand, they can contact with our service and we will solve them right away.

## Juniper JN0-105 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"> <li>Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.</li> </ul>  |
| Topic 2 | <ul style="list-style-type: none"> <li>Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device</li> </ul> |
| Topic 3 | <ul style="list-style-type: none"> <li>User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.</li> </ul>  |

|         |  |
|---------|--|
| Topic 4 | <ul style="list-style-type: none"> <li>• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li> </ul> |
| Topic 5 | <ul style="list-style-type: none"> <li>• Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.</li> </ul>  |
| Topic 6 | <ul style="list-style-type: none"> <li>• Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.</li> </ul>                         |

## JN0-105 Accurate Prep Material & Reliable JN0-105 Exam Bootcamp

The team of experts hired by JN0-105 exam torrent constantly updates and supplements the contents of our study materials according to the latest syllabus and the latest industry research results, and compiles the latest simulation exam question based on the research results of examination trends. We also have dedicated staffs to maintain updating JN0-105 practice test every day, and you can be sure that compared to other test materials on the market, JN0-105 quiz guide is the most advanced. It is known to us that having a good job has been increasingly important for everyone in the rapidly developing world; it is known to us that getting a Junos, Associate (JNCIA-Junos) certification is becoming more and more difficult for us. That is the reason that I want to introduce you our JN0-105 prep torrent. I promise you will have no regrets about reading our introduction. I believe that after you try our products, you will love it soon, and you will never regret it when you buy it.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q91-Q96):

### NEW QUESTION # 91

You are logged in to a Junos OS device with SSH and issued the show protocols | compare command in the configuration, but no output is shown.

Which statement is correct in this scenario?

- A. The command only works for interface configuration differences.
- B. Someone accidentally deleted the active configuration.
- C. There are no changes to the candidate configuration.
- D. You must commit the configuration before any output will be shown.

**Answer: C**

Explanation:

The show | compare command in Junos OS is used to display the differences between the candidate configuration and the active configuration. If no output is shown when you issue this command, it means that there are no changes between the candidate configuration and the active configuration. This indicates that the candidate configuration is identical to the active configuration, and thus no differences are displayed.

Reference:

"The show | compare command displays the differences between the candidate configuration and the active configuration. If there are no changes, no output is displayed."

### NEW QUESTION # 92

Which statement is correct concerning exception traffic processing?

- A. Exception traffic is rate-limited to protect the RE.
- B. Exception traffic is never forwarded.
- C. Exception traffic is discarded by the PFE.
- D. Exception traffic is always dropped during congestion.

**Answer: A**

Explanation:

Exception traffic refers to packets that the Packet Forwarding Engine (PFE) cannot process normally and must be forwarded to the Routing Engine (RE) for further processing. This includes packets destined for the router itself or packets needing special handling that the PFE cannot provide. To protect the RE from being overwhelmed by such traffic, which could potentially impact the router's control plane functions, exception traffic is rate-limited. This means that there's a threshold to how much exception traffic can be sent to the RE, ensuring that the router's critical management and control functions remain stable and responsive even during high traffic volumes or attacks.

#### NEW QUESTION # 93

What does the `user@router> clear log ospf-trace` command accomplish?

- A. Trace parameters are removed from the OSPF protocol configuration.
- B. Logging data into ospf-trace is stopped.
- C. The ospf-trace file is deleted.
- **D. Data in the ospf-trace file is removed and logging continues.**

**Answer: D**

Explanation:

The `clear log ospf-trace` command on a Juniper Networks router is used specifically to manage the contents of the log file named `ospf-trace`. Executing this command clears or deletes the existing data within the `ospf-trace` log file but does not stop the logging process. The router continues to log new OSPF-related events and data into this file after the command is executed. This functionality is crucial for troubleshooting and monitoring the OSPF (Open Shortest Path First) protocol's operation by allowing network administrators to remove old or irrelevant log data while continuously capturing new events without interruption.

#### NEW QUESTION # 94

You have logged on to a Junos device and are at the operational mode prompt.

Which two commands are used at this prompt? (Choose two.)

- **A. request system shutdown**
- B. run show interface terse
- **C. show interface ge-0/0/0**
- D. set interface ge-0/0/0 unit 0 family inet

**Answer: A,C**

Explanation:

At the operational mode prompt on a Junos device, you can use various commands to view the device's status and request system operations. The `show interface ge-0/0/0` command is used to display information about a specific interface, while the `request system shutdown` command is used to properly shut down the device.

The `set` command is used in configuration mode, not operational mode, and the `run` command is used to execute operational mode commands from configuration mode.

#### NEW QUESTION # 95

Which two statements about firewall filters are correct? (Choose two.)

- **A. Firewall filters are stateless.**
- B. Firewall filters can match Layer 7 parameters.
- **C. Firewall filters can match Layer 4 parameters.**
- D. Firewall filters are stateful.

**Answer: A,C**

Explanation:

Firewall filters in Junos OS are stateless, meaning they process each packet individually without regard to the state of a connection or sequence of packets. These filters can match various packet attributes, including those at Layer 4, such as TCP and UDP port numbers. This allows for granular control over traffic based on the type of service or application. Unlike stateless filters, stateful firewalls keep track of the state of active connections and make decisions based on the context of the traffic flow, which is not a

capability of Junos firewall filters. Additionally, Junos firewall filters primarily operate up to Layer 4 and do not natively inspect Layer 7 parameters, which involve application-level data.

## NEW QUESTION # 96

.....

You will earn the Juniper JN0-105 certification on the first try if you use JN0-105 Questions. Our high-quality Juniper JN0-105 practice questions preparation material in three formats will help you crack the Juniper JN0-105 Exam in one go. For the Juniper JN0-105 exam dumps, we offer Juniper JN0-105 PDF questions, desktop JN0-105 practice test software, and web-based JN0-105 practice exam software.
