Best Web-Development-Applications Preparation Materials - Web-Development-Applications Reliable Source

Are you still worried about your coming Web-Development-Applications exam and have no idea what to do? Are you too busy to study with all the books and other broad exam materials which will take you a long time to prepare for your exam? You can just choose to buy our Web-Development-Applications Exam Questions which have settle all these problems for you. And our pass rate of the Web-Development-Applications study materials is high as 98% to 100%. Hence they are your real ally for establishing your career pathway and get your potential attested.

WGU Web Development Applications Sample Questions (Q95-Q100):

NEW QUESTION # 95

A web designer creates the following HTML code:

Which CSS selector applies only to the first line?

- A. #Header
- B. .header
- C. #Welcome
- D. .Welcome

Answer: C

Explanation:

To apply CSS only to the first line of a particular HTML element, the ID selector #Welcome should be used as per the given HTML structure.

* CSS ID Selector: The ID selector is used to style the element with a specific id.

* Usage Example:

```
#Welcome {  
color: red;  
}
```

In this example, the #Welcome selector will apply the red color style only to the element with id="Welcome".

* W3C CSS Specification on Selectors

NEW QUESTION # 96

Given the following JavaScript code:

What happens when this code is executed?

- A. The object with the id innerHTML is changed to x.
- B. The object with the id innerHTML is changed to 6.
- C. The object with the id demo is changed to x.
- D. The object with the demo is changed to 6.

Answer: D

Explanation:

The provided JavaScript code sets a variable x to 6 and then assigns this value to the innerHTML of the HTML element with the id demo.

```
var x;
```

```
x = 6;
```

```
document.getElementById("demo").innerHTML = x;
```

Explanation:

* Variable Declaration: var x; declares the variable x.

* Variable Assignment: x = 6; assigns the value 6 to the variable x.

* DOM Manipulation: document.getElementById("demo").innerHTML = x; finds the element with id demo and sets its innerHTML to the value of x, which is 6.

Outcome:

* The content of the HTML element with the id demo will be changed to 6.

NEW QUESTION # 97

Which option changes the content of the first line to a valid CSS comment?

- A. <! "this is a comment">
- B. <!-- this is a comment -->
- C. /* this is a comment */
- D. // this is a comment

Answer: C

Explanation:

In CSS, comments must begin with /* and end with */.

"CSS comments are placed inside /* and */. These comments can span multiple lines and are ignored by the browser." HTML-style comments using <!-- --> and JavaScript-style comments using // are not valid in CSS and may cause parsing errors.

References:

CSS Syntax Specification

Given the following CSS code:

```
.title {  
  color : white;  
}
```

Which HTML element is affected?

Q <div id="title"X/div>

Q <titlex/title>

Q <div>title</div>

Q <div class="title"x/div>

NEW QUESTION # 98

Which code segment places text to the right of an image whose file name is `blue.png`?

- A. `- B. `- C. `- D. `

Answer: A

Explanation:

> "When using `float: left` on an image, the image aligns to the left, allowing subsequent inline content (such as text) to flow on the right side of the image."

>

> "The syntax `src="images/blue.png"` assumes the image is located in the 'images' directory. A path such as `src="blue.png/images"` is incorrect and would result in a broken image." So, option B is correct both in terms of syntax and intended behavior.

References:

* MDN Web Docs: float property

* W3C HTML5 Specification: element and image paths

NEW QUESTION # 99

What does declaring <!DOCTYPE html> indicate to the browser?

- A. The code is written in HTML4.
- B. The file extension is HTML4.
- C. The code is written in HTML5.
- D. The file extension is HTML5.

Answer: C

Explanation:

From the W3C HTML5 Recommendation, section "2.5 The DOCTYPE":

"A DOCTYPE is a required preamble. DOCTYPEs are required for legacy reasons. When omitted, browsers tend to use a different rendering mode that is incompatible with some specifications. Including the DOCTYPE in a document ensures that the browser makes a best-effort attempt at following the relevant specifications.

A DOCTYPE must consist of the following components, in this order:

* The string <!DOCTYPE (case-insensitive).

* One or more whitespace characters.

* The string html (case-insensitive).

* Optionally, a legacy DOCTYPE string.

* Zero or more whitespace characters.

* A > character.

In other words, <!DOCTYPE html> exactly."

And from MDN Web Docs' "<!DOCTYPE>" entry:

"The <!DOCTYPE html> declaration informs the browser that the page is written in HTML5 and that it should be rendered in standards mode (instead of quirks mode). It is the simplest, case-insensitive form of DOCTYPE defined by HTML5." Together, these extracts confirm that <!DOCTYPE html> tells the browser the document uses HTML5 and directs it to render according to the HTML5 (standards) specification rather than falling back to legacy rendering modes.
