With severe competition going up these years, more and more people stay clear that getting a higher degree or holding some professional CAP certificates is of great importance. So instead of spending every waking hour wholly on leisure and entertaining stuff, try to get a CAP certificate is meaningful. This CAP exam guide is your chance to shine, and our CAP practice materials will help you succeed easily and smoothly. With numerous advantages in it, you will not regret.

## Test Outline

**The (ISC)2 CAP Exam has 125 questions in a multiple-choice format which you need to finish within 3 hours. The passing score of the test is 700 out of 1000 points. Such an exam is currently available in English and you are expected to fulfill seven domains on authorizing the management of information systems as shown below:**

- Choosing Various Privacy & Security Controls;
- Program for Security Risk Management;
- Categories of Information Systems;
- Information Systems Authorization;
- Execution of Different Privacy & Security Controls;
- Evaluation of Security Controls;

## Advantage in the Career after to pass the Certification Exam

Having a Certified Authorization Professional (CAP) certification will certainly give you an advantage when hiring managers to look at your resume. If you have certification is a significant advantage in jobs competition as compared to those who do not have one. If you have the certificate then you can move up the corporate ladder or into a better, higher-paying job in your company. You can also join a unique group of certified and skilled professionals. There are many companies that support their employees in earning these certifications that may even lead to promotions and raises as well. Many companies have requirements by their professional recertify every two to three years.

PracticeMaterial exam study material is essential for candidates who want to appear for the The SecOps Group CAP certification exams and clear it to validate their skill set. This preparation material comes with Up To 1 year OF Free Updates And Free Demos. Place your order now and get Real CAP Exam Questions with these offers.

## The SecOps Group Certified AppSec Practitioner Exam Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Security Test and Evaluation (ST&E) is a component of risk assessment. It is useful in discovering system vulnerabilities. For what purposes is ST&E used?

Each correct answer represents a complete solution. Choose all that apply.

- A. To assess the degree of consistency between the system documentation and its implementation
- B. To implement the design of system architecture
- C. To determine the adequacy of security mechanisms, assurances, and other properties to enforce the security policy
- D. To uncover design, implementation, and operational flaws that may allow the violation of security policy

**Answer: A,C,D**

### NEW QUESTION # 12

Which of the following approaches can be used to build a security program?

Each correct answer represents a complete solution. Choose all that apply.

- A. Top-Down Approach
- B. Right-Up Approach
- C. Bottom-Up Approach
- D. Left-Up Approach

**Answer: A,C**

Explanation:

Section: Volume B

### NEW QUESTION # 13

Which of the following is a risk that is created by the response to another risk?

- A. Positive risk
- B. Residual risk
- C. Secondary risk
- D. Negative risk

**Answer: C**

### NEW QUESTION # 14

Which of the following HTTP response header prevents the client from caching the HTTP response in the most secure manner?

- A. Cache-Control: Private
- B. Secure-Cache: Enabled
- C. Cache-Control: no-cache, no-store
- D. Content-Security-Policy: no-cache, no-store

**Answer: C**

Explanation:

Caching HTTP responses can pose security risks, especially for sensitive data, as cached responses might be accessed by unauthorized users (e.g., on a shared device). The goal is to identify the HTTP response header that prevents caching in the most secure way. Let's evaluate the options:

\* Option A ("Cache-Control: no-cache, no-store"): Correct. The Cache-Control header with no-cache instructs clients to revalidate with the server before using a cached copy, and no-store prohibits caching entirely (no storage in any cache, including browser, proxy, or CDN). This combination ensures the response is not cached, providing the most secure prevention of caching for sensitive data.

\* Option B ("Secure-Cache: Enabled"): There is no standard HTTP header called Secure-Cache. This appears to be a made-up option and is not a valid mechanism for controlling caching.

\* Option C ("Cache-Control: Private"): The Cache-Control: Private directive allows caching but restricts it to the user's private cache (e.g., browser cache), preventing shared caches (e.g., proxies) from storing the response. However, it still permits caching in

\* Option D ("Content-Security-Policy: no-cache, no-store"): The Content-Security-Policy (CSP) header is used to mitigate XSS and other attacks by controlling which resources can be loaded (e.g., scripts, images). It does not control caching, and no-cache, no-store are not valid CSP directives. This is incorrect.

SecOps Group CAP Documents - "HTTP Caching Security," "Cache-Control Directives," and "OWASP Secure Headers Project" sections.

Frank is the project manager of the NHH Project. He is working with the project team to create a plan to document the procedures to manage risks throughout the project. This document will define how risks will be identified and quantified. It will also define how contingency plans will be implemented by the project team. What document is Frank and the NHH Project team creating in this scenario?

- Answer: D**
