

Juniper JN0-351시험대비덤프데모 & JN0-351최신버전 덤프공부자료

BONUS!!! Itcertkr JN0-351 시험 문제집 전체 버전을 무료로 다운로드하세요: https://drive.google.com/open?id=1pady8NHkiBJwpsaxutDf_GpPwjnd7NIZ

Juniper인증 JN0-351시험을 어떻게 패스할가 고민그만하고Itcertkr의Juniper 인증JN0-351시험대비 덤프를 데려가 주세요.가격이 착한데 비해 너무나 훌륭한 덤프품질과 높은 적중율, Itcertkr가 아닌 다른곳에서 찾아볼수 없는 혜택입니다.

Itcertkr의 Juniper인증 JN0-351시험덤프자료는 여러분의 시간,돈 ,정력을 아껴드립니다. 몇개월을 거쳐 시험준비공부를 해야만 패스가능한 시험을Itcertkr의 Juniper인증 JN0-351덤프는 며칠간에도 같은 시험패스 결과를 안겨드릴수 있습니다. Juniper인증 JN0-351시험을 통과하여 자격증을 취득하려면Itcertkr의 Juniper인증 JN0-351덤프로 시험준비공부를 하세요.

>> Juniper JN0-351시험대비 덤프데모 <<

JN0-351최신버전 덤프공부자료, JN0-351시험패스 가능한 공부자료

Juniper JN0-351 덤프는 고객님의Juniper JN0-351시험패스요망에 제일 가까운 시험대비자료입니다. 많은 자료정리 필요없이 Itcertkr에서 제공해드리는 깔끔한Juniper JN0-351덤프만 있으면 자격증을 절반 취득한것과 같습니다. Juniper JN0-351 덤프를 다운받아 열공하세요.

Juniper JN0-351 시험요강:

주제	소개
주제 1	BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.

주제 2	• Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.
주제 3	• Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
주제 4	• Layer 2 Security: This topic introduces Layer 2 protection mechanisms and firewall filters to fortify network security. Practical skills in configuring, monitoring, and troubleshooting these features prepare candidates to address exam objectives and real-world challenges effectively.

최신 JNCIS-ENT JN0-351 무료샘플문제 (Q136-Q141):

질문 # 136

In RSTP, which three port roles are associated with the discarding state? (Choose three.)

- A. disabled
- B. root
- C. backup
- D. alternate
- E. designated

정답: A,C,D

설명:

In Rapid Spanning Tree Protocol (RSTP), there are several port roles that determine the behavior of the port in the spanning tree. The roles include root, designated, alternate, backup, and disabled.

The discarding state is associated with the backup, alternate, and disabled roles. In a stable topology with consistent port roles throughout the network, RSTP ensures that every root port and designated port immediately transition to the forwarding state while all alternate and backup ports are always in the discarding state. Disabled ports are also in the discarding state.

질문 # 137

The ISP1.inet.0 route table has currently no routes in it.

What will happen when you commit the configuration shown on the exhibit?

□

- A. The inet.0 route table will be imported into the ISP1.inet.0 route table.
- B. The ISP1.inet.0 route table will be imported into the inet.0 route table.
- C. The inet.0 route table will be completely overwritten by the ISP1.inet.0 route table.
- D. The ISP1.inet.0 route table will be completely overwritten by the inet.0 route table.

정답: A

설명:

The configuration shown in the exhibit is an example of a routing instance of type virtual-router. A routing instance is a collection of routing tables, interfaces, and routing protocol parameters that create a separate routing domain on a Juniper device. A virtual-router routing instance allows administrators to divide a device into multiple independent virtual routers, each with its own routing table.

The configuration also includes a rib-group statement, which is used to import routes from one routing table to another. A rib-group consists of an import-rib statement, which specifies the source routing table, and an export-rib statement, which specifies the destination routing table. In this case, the rib-group name is inet-to-isp1, and the import-rib statement specifies inet.0 as the source routing table. The export-rib statement specifies isp1.inet.0 as the destination routing table.

This means that the routes from inet.0 will be imported into isp1.inet.0.

질문 # 138

R1 has a BGP session with a router that has a peer autonomous system number of 64501. It is exchanging routes, and is advertising

those routes to IBGP peers. The downstream IBGP peers, however, cannot pass traffic to the advertised networks. Referring to the exhibit, which configuration change must occur to solve this problem?

- A. The BGP group int-64503 must include the export next-hop-selfpolicy.
- B. The BGP group ext-64501 must include the import next-hop-selfpolicy.
- C. The BGP group int-64503 must include the import next-hop-selfpolicy.
- D. The BGP group ext-64501 must include the export next-hop-selfpolicy.

정답: A

질문 # 139

When electing a DIS in an IS-IS network, what is used to break a priority tie?

- A. lowest MAC address
- B. highest router ID
- C. lowest router ID
- D. highest MAC address

정답: D

질문 # 140

You are asked to create a new firewall filter to evaluate Layer 3 traffic that is being sent between VLANs. In this scenario, which two statements are correct? (Choose two.)

- A. You should create a family inet firewall filter with the appropriate match criteria and actions.
- B. You should apply the firewall filter to the appropriate VLAN.
- C. You should apply the firewall filter to the appropriate IRB interface.
- D. You should create a family Ethernet-switching firewall filter with the appropriate match criteria and actions.

정답: A,C

설명:

A firewall filter is a configuration that defines the rules that determine whether to forward or discard packets at specific processing points in the packet flow. A firewall filter can also modify the attributes of the packets, such as priority, marking, or logging. A firewall filter can be applied to various interfaces, protocols, or routing instances on a Juniper device. A firewall filter has a family attribute, which specifies the type of traffic that the filter can evaluate. The family attribute can be one of the following: inet, inet6, mpls, vpls, iso, or ethernet-switching. The family inet firewall filter is used to evaluate IPv4 traffic, which is the most common type of Layer 3 traffic on a network.

To create a family inet firewall filter, you need to specify the appropriate match criteria and actions for each term in the filter. The match criteria can include various fields in the IPv4 header, such as source address, destination address, protocol, port number, or DSCP value. The actions can include accept, discard, reject, count, log, policer, or next term. To apply a firewall filter to Layer 3 traffic that is being sent between VLANs, you need to apply the filter to the appropriate IRB interface. An IRB interface is an integrated routing and bridging interface that provides Layer

3 functionality for a VLAN on a Juniper device. An IRB interface has an IP address that acts as the default gateway for the hosts in the VLAN. An IRB interface can also participate in routing protocols and forward packets to other VLANs or networks.

Therefore, option C is correct, because you should create a family inet firewall filter with the appropriate match criteria and actions. Option D is correct, because you should apply the firewall filter to the appropriate IRB interface

질문 # 141

.....

It 업계 중 많은 분들이 인증시험에 관심이 많은 인사들이 많습니다. IT산업 중 더 큰 발전을 위하여 많은 분들이 Juniper JN0-351를 선택하였습니다. 인증시험은 패스를 하여야 자격증취득이 가능합니다. 그리고 무엇보다도 통행증을 받을 수 있습니다. Juniper JN0-351은 그만큼 아주 어려운 시험입니다. 그래도 Juniper JN0-351인증을 신청하여야 좋은 선택입니다. 우리는 매일매일 자신을 업그레이드 하여야만 이 경쟁이 치열한 사회에서 살아남을 수 있기 때문입니다.
