

Free PDF PTC-AMCA Dumps Collection & Top Medical Technology Certification Training - Updated Medical Technology AMCA Phlebotomy Technician Certification Exam

Question: 6

Which of the following statements regarding standard precautions for infection control is FALSE?

- A. Use both hands to recap needles.
- B. Hands should be washed before putting on and after removing gloves.
- C. Standard precautions apply to all secretions except sweat.
- D. Resuscitation devices may be used as an alternative to the mouth-to-mouth method.

Answer: A

Explanation:

Never use both hands, or even one hand, to recap a needle. If a needle must be recapped, the cap should be placed in a cap-holding device or on a solid surface and the needle slid into it. Hands should be washed both before putting on and after removing gloves. Standard precautions should be followed for all body fluids except sweat. Resuscitation devices may be used as an alternative to mouth-to-mouth resuscitation.

Question: 7

The phlebotomist is NOT required to use an N95 (or equivalent) respirator when entering the room of a patient with which of the following communicable diseases, even when the phlebotomist is not immune to the disease?

- A. Chickenpox
- B. Measles
- C. Influenza
- D. COVID-19

Answer: C

Explanation:

An N95 or equivalent respirator must be worn by all healthcare personnel entering the room of a patient known or suspected to have a disease that is spread through airborne transmission if the healthcare worker is not immune to the disease. These diseases include chickenpox, measles, COVID-19, and tuberculosis. Many healthcare facilities require the use of N95 or equivalent respirators by all personnel who may be exposed to these diseases even if they are immune due to vaccination or previous infection. However, for diseases that are spread through droplet transmission, such as influenza and the common cold, a surgical mask provides adequate protection.

Question: 8

Which of the following is NOT a violation of general laboratory safety rules?

New PTC-AMCA Exam Cram | Reliable PTC-AMCA Test Prep

As you may know that the windows software of the PTC-AMCA study materials only supports windows operating system. Also, it needs to run on Java environment. If the computer doesn't install JAVA, it will automatically download to ensure the normal running

of the PTC-AMCA Study Materials. What's more, all computers you have installed our study materials can run normally. Our PTC-AMCA exam guide are cost-effective.

Medical Technology AMCA Phlebotomy Technician Certification Exam Sample Questions (Q104-Q109):

NEW QUESTION # 104

Which of the following is NOT part of the renal system?

- A. Adrenal glands
- B. Bladder
- C. Ureters
- D. Kidneys

Answer: A

Explanation:

The adrenal glands sit on top of the kidneys, but these glands are part of the endocrine system and not the renal (kidney/urinary) system. The renal system excretes waste products in urine, regulates blood volume and blood pressure as well as blood pH and levels of electrolytes. It comprises two kidneys (located in the right and left flank areas) with ureters (which carry urine) extending from the kidneys to the bladder (which collects urine). The urethra carries the urine to the external meatus (opening) during urination.

NEW QUESTION # 105

Which of the following pieces of information does NOT have to be provided to patients as part of informed consent?

- A. Risks
- B. Benefits
- C. Methods
- D. Cost of testing

Answer: D

Explanation:

The information that does not have to be provided to patients as part of informed consent is the cost of testing; however, if the cost is extremely high, patients should be made aware of this, especially if they lack insurance. Patients do need to be aware of the methods used to conduct the test the risks of the test, and the benefits. If alternate methods of testing are available, patients should also be apprised of these so that they have the option to choose.

NEW QUESTION # 106

The peak time for most drugs after intramuscular injection is approximately which is relevant for timing sample collection for therapeutic drug monitoring.

- A. 2 hours
- B. 30 minutes
- C. 90 minutes
- D. 60 minutes

Answer: D

Explanation:

The peak time for most drugs after intramuscular injection is approximately 60 minutes, whereas the peak time after IV administration is approximately 30 minutes. Oral medications, on the other hand, usually peak after 1-2 hours. Peak levels are assessed to ensure that the patient is not receiving a toxic dose of medication. Medications that are assessed with therapeutic drug monitoring typically have a narrow therapeutic range.

NEW QUESTION # 107

For blood cultures, if using iodophors for the main disinfectant, how long does it take for the iodophors to adequately disinfect the

skin?

- A. 60-90 seconds
- **B. 90-120 seconds**
- C. 15-30 seconds
- D. 30-60 seconds

Answer: B

Explanation:

Iodophors take 90-120 seconds to adequately disinfect the skin for blood cultures. The usual procedure is to cleanse the skin with a 30-second friction rub with 70% isopropyl alcohol, allow the alcohol to dry completely, then apply the main disinfectant and let it dry for the time recommended by the manufacturer. If the phlebotomist needs to palpate the vein after applying the disinfectant, sterile gloves must be worn.

NEW QUESTION # 108

The most plentiful electrolyte in serum or plasma is:

- A. Chloride
- **B. Sodium**
- C. Calcium
- D. Potassium

Answer: B

Explanation:

Sodium is the most plentiful electrolyte in serum or plasma.

NEW QUESTION # 109

.....

Up to now, we have successfully issued three packages for you to choose. They are PDF version, online test engines and windows software of the PTC-AMCA practice prep. The three packages can guarantee you to pass the exam for the first time. Though the content is the same with all versions of the PTC-AMCA Study Materials, the displays are totally different.
