

New HPE7-A03 Exam Practice, HPE7-A03 Test Review

DOWNLOAD the newest PassSureExam HPE7-A03 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=17WT-zKWaKOMz6FuiB4uivSRG3Rj2ZP5z>

Today is the right time to advance your career. Yes, you can do this easily. Just need to pass the HPE7-A03 certification exam. Are you ready for this? If yes then get registered in HP HPE7-A03 certification exam and start preparation with top-notch PassSureExam HPE7-A03 Exam Practice questions today. These HP HPE7-A03 questions are available at PassSureExam with up to 1 year of free updates.

In order to make all customers feel comfortable, our company will promise that we will offer the perfect and considerate service for all customers. If you buy the HPE7-A03 training files from our company, you will have the right to enjoy the perfect service. We have employed a lot of online workers to help all customers solve their problem. If you have any questions about the HPE7-A03 learning dumps, do not hesitate and ask us in your anytime, we are glad to answer your questions and help you use our HPE7-A03 study questions well. We believe our perfect service will make you feel comfortable when you are preparing for your exam.

HPE7-A03 Test Review & Valid HPE7-A03 Test Preparation

These Aruba Certified Campus Access Architect Exam (HPE7-A03) practice test questions are customizable and give real Aruba Certified Campus Access Architect Exam (HPE7-A03) exam experience. Windows computers support desktop software. The web-based HPE7-A03 Practice Exam is supported by all browsers and operating systems.

HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
Topic 2	<ul style="list-style-type: none">Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.
Topic 3	<ul style="list-style-type: none">Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.
Topic 4	<ul style="list-style-type: none">Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

A global cruise line company needs to refresh its current fleet. They will refresh the 'insides' of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests.

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (980 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft).

Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN infrastructure is based on the 200/300 series indoor and outdoor APs running InstantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because internet connection is guaranteed.

Based on the best practices and customer requirements, what is the correct LAN approach?

- A. management and user VLANs in the overlay
- B. management VLAN in the overlay, user VLANs in the underlay
- C. **management and user VLANs in the underlay**
- D. management VLAN in the underlay, user VLANs in the overlay

Answer: C

Explanation:

Underlay Network: This approach is ideal for maintaining simplicity and efficiency in a ship's network environment, where there is a clear need for robust connectivity for both management and user traffic. By keeping both types of VLANs in the underlay, the network can ensure better performance and easier troubleshooting. The underlay provides the foundational connectivity, which is crucial for handling the expected increase in network traffic due to the upgrade.

Overlay Networks: While overlay networks can provide flexibility and segmentation, they are generally more complex and may not be necessary in this scenario, especially given the focus on cost-effectiveness and the existing cabling structure.

NEW QUESTION # 22

ACME retail has 38 locations spread out across US states and two provinces in Canada. They are looking to grow 20% over the next two years. They have an HO with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location.

The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 st m) and the Canadian warehouse is 130K sq ft (12100 sq m). The forklifts on the loading docks are equipped with a wireless tablet on board.

A typical store is reportedly about 60,000 sq ft (5575 sqm) and smaller stores are planned at 25,000 sq ft

'2320 sq mi. The locations need to expand the abilities to vendors that need to add setup displays or interactive kiosks in the stores. The current infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5, and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store.

Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current pbx system later this year. With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would like to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half.

The office has an MDF and two IDFs located on floors one and two. The HOF is in the basement, and you have multiple WAN circuits for the HO links. Each store has a local handoff from the cable company (ethernet) In the middle of the store in the office, so distance for the wiring is not an issue.

The customer has budget concerns but does want something that could last 7+ years.

Based on the scenario, where would you look to add additional items to the BOM to aid the company goals? (Select three.)

- A. Sales Management
- B. Customer Experience Officer
- C. Security Team/CISO
- D. Marketing
- E. Finance Team
- F. Building Facilities

Answer: D,E,F

Explanation:

In addressing the company's goals and the challenges presented in the scenario, adding items to the Bill of Materials (BOM) that would involve the Building Facilities team could include infrastructure upgrades like improved cabling (moving from Cat5 to a higher category) or enhancements to support the new wireless and VoIP systems. For the Marketing team, technologies that could enable better interaction with customers, such as location-based services or analytics tools, would be beneficial. These could help in understanding customer behavior within the stores and tailoring marketing efforts accordingly. Finally, input from the Finance Team would be essential in ensuring that the solutions chosen fit within the budget constraints and offer a good return on investment, especially considering the company's desire for a solution that could last 7+ years and support their growth plans.

NEW QUESTION # 23

What are the considerations when using existing MMF and upgrading to equipment capable of 10 GbE speeds? (Select two)

- A. single fiber tube into cabinet
- B. type of MMF fiber
- C. redundant fiber tube into cabinet
- D. type of fiber connector
- E. length of MMF fiber

Answer: B,E

Explanation:

When upgrading existing Multimode Fiber (MMF) infrastructure to accommodate equipment capable of 10 GbE speeds, two primary considerations are the length of the MMF fiber (Option A) and the type of MMF fiber (Option C). The length of the fiber impacts the signal quality and bandwidth capacity, with longer lengths potentially requiring signal conditioning or different types of fiber to support higher speeds. The type of MMF fiber, such as OM1, OM2, OM3, or OM4, significantly affects its bandwidth capabilities and distance limitations at 10 GbE speeds. OM3 and OM4 fibers are designed to support 10 GbE transmissions over longer distances compared to OM1 and OM2, making them more suitable for upgrades to higher speeds.

Understanding these factors is crucial to ensure the existing fiber infrastructure can support the desired network performance without extensive modifications or replacements.

NEW QUESTION # 24

The customer recently found out that Aruba OS-CX switches are capable of Application Recognition. What requirements should be fulfilled in order to do this? (Select two.)

- A. 6200F/M with Aruba CX Advanced License
- B. 6400 with Aruba CX Advanced License
- C. 6300F/M with Aruba CX Advanced License
- D. 8360 with Aruba CX Advanced License

Answer: B,C

NEW QUESTION # 25

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of "smart office" technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client would like to include Blue Dot wayfinding for their carpeted office space. The retail floors are not currently in scope. What would be needed to ensure proper licensing of the solution?

- A. Qty 4 Meridian Blue Dot subscriptions
- B. Qty 4 Meridian Map subscriptions
Qty 4 Meridian Blue Dot subscriptions
- **C. Qty 1 Meridian Blue Dot subscription**
- D. Qty 1 Meridian Tracking subscription
Qty 1 Meridian Blue Dot subscription

Answer: C

Explanation:

For implementing Blue Dot wayfinding in the carpeted office space of the multinational financial institution, a Meridian Blue Dot subscription is essential. Meridian's Blue Dot wayfinding technology allows for real-time indoor navigation, which can enhance the experience of employees and visitors by providing turn-by-turn directions within the office space. Given that the requirement is specifically for the carpeted office space and not for the retail floors, a single Meridian Blue Dot subscription would be the starting point to enable this functionality. This subscription would cover the deployment of the Blue Dot technology across the specified office floors, allowing for the integration of this feature into the institution's app or digital platform for indoor navigation. Additional subscriptions, such as Meridian Map subscriptions, might be required for more extensive mapping needs, but based on the provided options and the specific request for Blue Dot functionality, a single Blue Dot subscription would be the most direct answer.

NEW QUESTION # 26

.....

PassSureExam will give you the best exam HPE7-A03 study guide for your exam. The validity and reliability of our HPE7-A03 practice torrent is confirmed by our experts. There are many customers have passed their HPE7-A03 exam with our help. Our HPE7-A03 test materials will be updated on the homepage and timely update the information related to the HPE7-A03 qualification examination. We will give some promotion on our pdf cram, so that you can get the most valid and cost effective HPE7-A03 prep material. So you can rest assured to choose our HPE7-A03 training guide.
