Exam Microsoft AZ-305 Sample & Latest AZ-305 Test Pdf

No doubt the Designing Microsoft Azure Infrastructure Solutions (AZ-305) certification is one of the most challenging certification exams in the market. This Designing Microsoft Azure Infrastructure Solutions (AZ-305) certification exam gives always a tough time to Designing Microsoft Azure Infrastructure Solutions (AZ-305) exam candidates. The Lead4Pass understands this hurdle and offers recommended and real Microsoft AZ-305 Exam Practice questions in three different formats. These formats hold high demand in the market and offer a great solution for quick and complete Designing Microsoft Azure Infrastructure Solutions (AZ-305) exam preparation.

The Microsoft AZ-305 exam is designed to assess a candidate's ability to design Azure solutions that meet business requirements, as well as their understanding of Azure services and their use in different scenarios. AZ-305 Exam covers a range of topics, including designing compute and storage solutions, designing networking solutions, and designing security solutions.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q242-Q247):

NEW QUESTION # 242

You have an on-premises file server that stores 2 TB of data files.

You plan to move the data files to Azure Blob Storage in the West Europe Azure region. You need to recommend a storage account type to store the data files and a replication solution for the storage account. The solution must meet the following requirements:

- * Be available if a single Azure datacenter fails.
- * Support storage tiers.
- * Minimize cost.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the 'Answer Area' of the Microsoft AZ-305 exam. It features the Microsoft logo on the left. The main content area is divided into two sections: 'Storage Account type:' and 'Redundancy:'. The 'Storage Account type:' section has a dropdown menu with three options: 'Premium block blobs', 'Standard general-purpose v1', and 'Standard general-purpose v2'. The 'Redundancy:' section has a dropdown menu with four options: 'Geo-redundant storage (GRS)', 'Zone-redundant storage (ZRS)', 'Locally-redundant storage (LRS)', and 'Read-access geo-redundant storage (RA-GRS)'. A large watermark 'lead4pass.com' is visible across the center of the answer area.

Answer:

Explanation:

Answer Area

Storage Account type:

- Premium block blobs
- Standard general-purpose v1
- Standard general-purpose v2

Redundancy:

- Geo-redundant storage (GRS)
- Zone-redundant storage (ZRS)
- Locally-redundant storage (LRS)
- Read-access geo-redundant storage (RA-GRS)

Explanation

Account Type: StorageV2

Replication solution: Zone-redundant storage (ZRS)

<https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy>

<https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy#supported-azure-storage-services>

<https://docs.microsoft.com/en-us/azure/storage/common/storage-account-overview#types-of-storage-accounts> Data must be available if a single Azure datacenter fails. It means the storage account must support ZRS replication. Also, solution should support storage tiers. Only General-purpose V2 supports ZRS and storage tiers.

<https://docs.microsoft.com/en-us/azure/storage/blobs/storage-blob-storage-tiers>

NEW QUESTION # 243

Your company has two on-premises sites in New York and Los Angeles and Azure virtual networks in the East US Azure region and the West US Azure region. Each on-premises site has Azure ExpressRoute circuits to both regions.

You need to recommend a solution that meets the following requirements:

Outbound traffic to the Internet from workloads hosted on the virtual networks must be routed through the closest available on-premises site.

If an on-premises site fails, traffic from the workloads on the virtual networks to the Internet must reroute automatically to the other site.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Routing from the virtual networks to the on-premises locations must be configured by using:

- Azure default routes
- Border Gateway Protocol (BGP)
- User-defined routes

The automatic routing configuration following a failover must be handled by using:

- Border Gateway Protocol (BGP)
- Hot Standby Routing Protocol (HSRP)
- Virtual Router Redundancy Protocol (VRRP)

Answer:

Explanation:

Routing from the virtual networks to the on-premises locations must be configured by using:

- Azure default routes
- Border Gateway Protocol (BGP)
- User-defined routes

The automatic routing configuration following a failover must be handled by using:

- Border Gateway Protocol (BGP)
- Hot Standby Routing Protocol (HSRP)
- Virtual Router Redundancy Protocol (VRRP)

NEW QUESTION # 244

Your company has 20 web APIs that were developed in-house.

The company is developing 10 web apps that will use the web APIs. The web apps and the APIs are registered in the company's Azure AD tenant. The web APIs are published by using Azure API Management.

You need to recommend a solution to block unauthorized requests originating from the web apps from reaching the web APIs. The solution must meet the following requirements:

- * Use Azure AD-generated claims.

- * Minimize configuration and management effort

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

NOTE: Each correct selection is worth one point.

Answer Area

 Grant permissions to allow the web apps to access the web APIs by using:

Configure a JSON Web Token (JWT) validation policy by using:

lead1pass.com

Answer:

Explanation:

Answer Area

 Grant permissions to allow the web apps to access the web APIs by using:

Configure a JSON Web Token (JWT) validation policy by using:

Explanation:

Answer Area

 Grant permissions to allow the web apps to access the web APIs by using:

Configure a JSON Web Token (JWT) validation policy by using:

NEW QUESTION # 245

You plan to migrate App1 to Azure.

You need to estimate the compute costs for App1 in Azure. The solution must meet the security and compliance requirements.

What should you use to estimate the costs, and what should you implement to minimize the costs? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To estimate the costs, use:

 The Azure Cost Management Power BI app

The Azure Total Cost of Ownership (TCO) calculator

Implement:

Azure Hybrid Benefit

Azure Spot Virtual Machine pricing

lead1pass.com

Answer:

Explanation:

<https://azure.microsoft.com/en-us/pricing/hybrid-benefit/>

NEW QUESTION # 246

You have an on-premises application named App1 that uses an Oracle database.

You plan to use Azure Databricks to transform and load data from App1 to an Azure Synapse Analytics instance.

You need to ensure that the App1 data is available to Databricks.

Which two Azure services should you include in the solution? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Azure Data Box Edge
- **B. Azure Data Factory**
- C. Azure Data Lake Storage
- D. Azure Data Box Gateway
- **E. Azure Import/Export service**

Answer: B,E
