Practice PL-400 Exam Pdf, Test PL-400 Score Report

BraindumpsIT offers a free demo of the PL-400 exam dumps for customers to try out before purchasing. This allows individuals to examine the PL-400 exam prep material and make decisions. Customers will receive free updates to the PL-400 exam questions for three months if any changes are made to the Microsoft Power Platform Developer (PL-400) exam content after the purchase of the PL-400 Practice Questions. BraindumpsIT has helped thousands of individuals worldwide in obtaining their PL-400 certification through their real PL-400 pdf dumps and practice tests. Passing the Microsoft Power Platform Developer (PL-400) exam on the first attempt can save individuals both time and money.

Microsoft Power Platform Developer Sample Questions (Q119-Q124):

NEW QUESTION # 119

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A Common Data Service (CDS) environment has two custom entities named Building code and Work item.

Building code has a code date custom field and Work item has an elapsed time custom field. Construction workers use a

consolidated custom form with data from both entities to fill in their daily work items.

A JavaScript library is used with these custom entities and fields to apply complex logic.

You need to ensure that the JavaScript library continues to function as originally designed if other developers expand the environment.

Solution: In form properties of the consolidated form, add the JavaScript library in the events tab and add the two custom fields to the dependent fields section of the non-event dependencies tab.

Does the solution meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Instead, in the JavaScript library, add Building code with Code date and Work item with Elapsed time in the dependencies tab.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/customerengagement/on-premises/developer/web-resource-dependencies>

NEW QUESTION # 120

An organization has a Dynamics 365 Customer Engagement.

You plan to use a JavaScript web resources file in the Accounts form. The file has a dependency on two image web resource files and on the custom field new_placeofbirth in the Account entity.

You need to add the dependencies for the JavaScript file.

Which three action should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Open the web resources file, add the two image web resources to the dependency's lists, and then add the custom field new_placeofbirth to the dependency's list.
- B. In the Account form, select Form Properties, select Non-Event Dependencies, and then add the custom field new_placeofbirth.
- C. Select Account, select Forms, and then select the Account form.
- D. From Web Resources, select the JavaScript file for the Account form and then select the JavaScript file.
- E. In the Account form, select Form Properties and add the primary JavaScript file and the other two image web resources in Form Libraries.
- F. From Settings, select Customization and then select Customize the System.

Answer: B,C,F

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/customerengagement/on-premises/developer/web-resource-dependencies>

NEW QUESTION # 121

You need to select a process to create each function.

Which process should you use? To answer, drag the appropriate processes to the correct functions. Each process may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Processes	Function	Process
Microsoft Flow	Create a Slack notification from a lead.	process
Workflow	Change the priority field.	process
Business process flow	Ensure appropriate information is added to leads.	process

Answer:

Explanation:

Processes	Function	Process
Microsoft Flow	Create a Slack notification from a lead.	Microsoft Flow
Workflow	Change the priority field.	Workflow process
Business process flow	Ensure appropriate information is added to leads.	Business process flow

NEW QUESTION # 122

You need to resolve CustomerB's issues with the check-in application.

Which two options can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Filter to LookUp
- B. Search to LookUp
- C. LookUp to Search
- D. LookUp to Filter

Answer: C,D

Explanation:

CustomerB reports that the check-in app returned only one search result for their last name, which is not the correct name.

The Filter function finds records in a table that satisfy a formula. Use Filter to find a set of records that match one or more criteria and to discard those that don't.

The LookUp function finds the first record in a table that satisfies a formula. Use LookUp to find a single record that matches one or more criteria.

The Search function finds records in a table that contain a string in one of their columns.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/functions/function-filter-lookup>

NEW QUESTION # 123

You are synchronizing company data from a SQL Server-based .NET application into a Common Data Service (CDS) environment.

The data is entered in both the SQL Server and CDS systems.

You have a program that includes the following code:

```
var account = new Microsoft.Crm.Sdk.Messages.CreateAccountRequest { Account = "accountnumber", "C0-555"};
account["name"] = "Contoso";
account["creditlimit"] = new Money(100000);
var request = new UpsertRequest() { Target = account };
var response = (UpsertResponse)_serviceProxy.Execute(request);
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

	Yes	No
Creating a new field to store the record identifier from the database resolves the error: The specified key attributes are not a defined key for the account entity.	☐	☐
Creating an alternate key that uses the accountnumber field resolves the error: The specified key attributes are not a defined key for the account entity.	☐	☐
If an account exists with only the account name entered as Contoso and all other fields empty, a new account record is created.	☐	☐
If an account exists that uses the account number CO-555, a new account record is created.	☐	☐

Answer:

Explanation:

	Yes	No
Creating a new field to store the record identifier from the database resolves the error: The specified key attributes are not a defined key for the account entity.	☐	☒
Creating an alternate key that uses the accountnumber field resolves the error: The specified key attributes are not a defined key for the account entity.	☒	☐
If an account exists with only the account name entered as Contoso and all other fields empty, a new account record is created.	☒	☐
If an account exists that uses the account number CO-555, a new account record is created.	☐	☒

Explanation:

	Yes	No
Creating a new field to store the record identifier from the database resolves the error: The specified key attributes are not a defined key for the account entity.	☐	☒
Creating an alternate key that uses the accountnumber field resolves the error: The specified key attributes are not a defined key for the account entity.	☒	☐
If an account exists with only the account name entered as Contoso and all other fields empty, a new account record is created.	☒	☐
If an account exists that uses the account number CO-555, a new account record is created.	☐	☒

Box 1: No.

An alternate key is needed, not a new field for the record identifier.

Box 2: Yes

The specified key attributes are not a defined key for the account entity.

Name: EntityKeyNotDefined

Message: The specified key attributes are not a defined key for the PL-400 entity Box 3: Yes One way to create an entity is by using the UpsertRequest class. An upsert will create a new entity when there is no existing record that has the unique identifiers included in the entity passed with the request.

Box 4: No
