## Microsoft Power Platform Functional Consultant Sample Questions (Q146-Q151):

**NEW QUESTION # 146**

Hotspot Question

You configure an alert in Power BI.

You need to alert users when the value of a tile exceeds a threshold. To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

**Answer:**

Explanation:

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

Explanation:

You can set alerts on tiles in your My Workspace (POWERbi).

Only you can see the alerts you set, even if you share your dashboard. Even the dashboard owner can't see alerts you set on your view of their dashboard

**NEW QUESTION # 147**

A company is planning to create a Power Virtual Agents bot.

The bot has the following requirements:

\* The bot must provide address information for the company.

\* The bot must be available from Microsoft Teams and from the internet website of the company.

You need to configure the bot. Which component should you use?

- A. Template
- **B. Channel**
- C. Skill
- D. Composer

**Answer: B**

**NEW QUESTION # 148**

You are creating a Power Virtual Agents chatbot that uses multiple topics.

Each user interaction can reference more than one topic.

You need to be able to capture a value in an initial topic and use it in subsequent topics.

Which type of variable should you create?

- A. Topic
- **B. Bot**

- C. Context

**Answer: B**

**NEW QUESTION # 149**

You configure an alert in Power BI.

You need to alert users when the value of a tile exceeds a threshold. To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

**Answer:**

Explanation:

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

Explanation:

Where should you configure the Power BI alert so that it triggers the process?

Power BI
Common Data Service
Power Automate
Power BI admin portal

Who can see alerts configured for Power BI?

The person who created the alert.
The dashboard owner and the person who created the alert.
Everyone who has access to the dashboard.
Everyone who has access to the Power BI instance.

**NEW QUESTION # 150**

You need to address the executive's concerns regarding unnecessary data access.

Which security changes should you make? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

**Concern** – Unnecessary user access to client data during verification

**Security Measure** –

Assign records to the user doing the verification and change table security to basic.  
Assign records to a service account and share the record with the team member doing the verification.  
Assign records to a service account and add the team member doing the verification by using an access team.

**Concern** – Unnecessary user access to client data after the request is completed

**Security Measure** –

Assign records to the QV team when the service request is completed.  
Assign records to a service account when the service request is completed.  
Assign records to the team member doing the verification when the service request is completed.

**Answer:**

Explanation:  
**Answer Area**

**Concern** – Unnecessary user access to client data during verification

**Security Measure** –

Assign records to the user doing the verification and change table security to basic.  
Assign records to a service account and share the record with the team member doing the verification.  
Assign records to a service account and add the team member doing the verification by using an access team.

**Concern** – Unnecessary user access to client data after the request is completed

**Security Measure** –

Assign records to the QV team when the service request is completed.  
Assign records to a service account when the service request is completed.  
Assign records to the team member doing the verification when the service request is completed.

Explanation

Box 1: Assign records to a service account and add the team member doing the verification by using an access team.  
When to use access teams

- \* The teams are dynamically formed and dissolved. This typically happens if the clear criteria for defining the teams, such as established territory, product, or volume aren't provided.
- \* The team members require different access rights on the records. You can share a record with several access teams, each team providing different access rights on the record. For example, one team is granted the Read access right on the account and another team, the Read, Write and Share access rights on the same account.
- \* A unique set of users requires access to a single record without having an ownership of the record.

Box 2: Assign records to the QV team when the service request is completed.

Issues: More employees than are required can access individual client information and continue to have access after a service request is completed.

Management has decided to create a new qualification verification (QV) role to help ensure that clients get the most accurate results. This role examines completed work to ensure that nothing is missed.

\* When users go on vacation, all their outstanding Service Request records are assigned to a substitute employee. The substitute employees are unable to see all the qualifications related to their service requests.
