- A. Process Funnel
- B. Diagram
- C. Variant Explorer
- D. Process Discovery
- E. Process Conformance

**Answer: A,B,E**

Explanation:

Certain widgets in SAP Signavio Process Intelligence require a link to a process model (e.g., a BPMN model) to generate meaningful insights by contextualizing data against a defined structure. The documentation specifies:

\* Option A (Diagram): The Diagram Widget displays process models from the SAP Signavio Process Manager workspace and requires a link to a specific model to visualize it in the Collaboration Hub or Process Intelligence.

\* Option D (Process Funnel): The Process Funnel Widget visualizes case progression along a process path and often needs to be

linked to a process model to define the steps in the funnel, ensuring accurate representation of the process flow.

\* Option E (Process Conformance): The Process Conformance Widget compares actual process execution against a reference BPMN model, requiring a direct link to the model to identify conformance issues.

\* Option B (Process Discovery) is incorrect because it generates process models automatically from event logs without needing a predefined process model.

\* Performance Indicators: Displays key metrics like cycle time, cost, or error rates to assess process efficiency.

\* Related Content for Further Analysis: Provides links to additional analyses or widgets to deepen the investigation of specific issues." (SAP Signavio Process Intelligence User Guide, section on "Guided Analysis Structure").

\* Option A (Typical improvement opportunities): This section identifies common process inefficiencies and offers actionable recommendations, such as reducing wait times or streamlining steps.

\* Option C (Performance indicators): This section presents KPIs relevant to the process, enabling users to evaluate performance and prioritize improvements.

\* Option E (Related content for further analysis): This section suggests additional analyses or widgets to explore related aspects of the process, enhancing the depth of investigation.

\* Option B (Ideas for discovering process pitfalls) is incorrect as it is not a formal section of guided analysis; pitfalls are covered under improvement opportunities or performance indicators.

\* Option D (Most relevant filters) is incorrect because, while filters are used in guided analysis, they are not a distinct section but a tool applied across sections.
