## Salesforce Reliable Slack-Admn-201 Test Notes: Salesforce Certified Slack Administrator - Exam4Free 10 Years of Excellence

Passing the Slack-Admn-201 exam requires the ability to manage time effectively. In addition to the Salesforce Certified Slack Administrator (Slack-Admn-201) exam study materials, practice is essential to prepare for and pass the Salesforce Slack-Admn-201 exam on the first try. It is critical to do self-assessment and learn time management skills. Because the Slack-Admn-201 test has a restricted time constraint, time management must be exercised to get success. Only with enough practice one can answer real Salesforce Slack-Admn-201 exam questions in a given amount of time.

### Salesforce Certified Slack Administrator Sample Questions (Q53-Q58):

#### NEW QUESTION # 53

You're the Grid Owner for your sales company's Slack Enterprise Grid instance. Departments are spread across multiple workspaces and collaborate with their customers through Slack Connect.

Your company is growing quickly, and you want to have more control over external collaboration. You decide to set up an external workspace dedicated to Slack Connect channels. This workspace should include all current users, plus any future users.

What is the easiest and most efficient way to go about adding users to the new workspace? (Select the best answer.)

- A. Sync all current and future users to the workspace using identity provider (IdP) groups.
- B. Use the workspace's admin dashboard to add all users within your organization.
- C. Use an org-wide default channel to introduce the new workspace and its purpose. Ask all users who are currently using Slack Connect to join the workspace.
- **D. Make the workspace a default workspace for all current and future users.**

**Answer: D**

Explanation:

The most efficient method to ensure all users are automatically added is:

"Make the workspace a default workspace for the Enterprise Grid organization. This way, all current and future members will automatically be added without manual intervention." Syncing IdP groups (Option D) could work but requires additional setup complexity and group management.

(Reference: Slack Administration Study Guide - Default Workspace Management in Enterprise Grid)

#### NEW QUESTION # 54

Which of the following would most make your company a good candidate to use Slack's Enterprise Key Management (EKM)?

- **A. Your company frequently shares personally identifiable information (PII).**
- B. Your company's employees primarily use unsecured mobile devices to access Slack.
- C. You use Azure for all of your key management.
- D. Your company is in the public sector.

**Answer: A**

Explanation:

Slack's Enterprise Key Management (EKM) provides organizations with the ability to control and revoke access to data encryption keys, ensuring protection for sensitive information such as PII (personally identifiable information).

Slack documentation states:

"Slack EKM allows customers to manage and control access to their data in Slack by using their own encryption keys. It is ideal for industries that frequently handle sensitive data such as PII, PHI, and financial information." Using unsecured mobile devices (option A) is a mobile device management issue, Azure usage (option C) is not a sole qualifier, and being in the public sector (option D) may suggest high-security needs but does not directly relate to EKM eligibility.

-

#### NEW QUESTION # 55

The Slack implementation team at Large Inc is confirming all of the settings on their new Enterprise Grid organization and wants to make sure that they have appropriately involved the Security team in any critical security decisions.

Which TWO of the following settings are most critical to discuss with their Security team? (Choose two.)

- **A. Whether to enable admin-approved apps**
- B. Who can create and archive channels
- **C. Who can invite new members**
- D. Who is allowed to add custom emoji

**Answer: A,C**

Explanation:

Security-critical settings involve decisions that could expose the organization to risk through external access or the addition of third-party apps. Slack documentation specifies:

"App management and member invitation settings are critical security configurations. Restricting who can add apps (admin-approved apps) and who can invite new members ensures better control over external access and data exposure." Custom emoji (B) and channel creation (C) impact user experience but are not considered critical security matters.

-

#### NEW QUESTION # 56

What would be the expected behavior if a team member in Enterprise Grid is added to an IdP (Identity Provider) group with auto-provisioning enabled to a workspace?

- A. There will be no changes to the member's workspace list.
- B. The member would be automatically added to the new workspace and would be unable to leave.
- **C. The member would be automatically added to the new workspace unless it is a hidden workspace.**

- D. The member would be notified that they have a new workspace that they can join and would be unable to dismiss it until they have joined the workspace.

**Answer: C**

Explanation:

In Enterprise Grid, if auto-provisioning is enabled via an IdP group, when a member is added to that group, they are automatically provisioned to the specified workspace. According to Slack's official Enterprise Grid documentation:

"When a member is added to an IdP group that's mapped to a workspace, they will be automatically provisioned (added) to the workspace, unless the workspace is set as hidden." Hidden workspaces require an invitation or manual addition and are excluded from automatic group provisioning. Therefore, unless the workspace is hidden, members will automatically join it without needing to take any manual action.

(Reference: Slack Administration Study Guide - Enterprise Grid Configuration and IdP Group Management)

### NEW QUESTION # 57

You're a member of a public Slack Connect channel that is being used to collaborate with members of a partner organization. You can see that one of your primary contacts at the partner organization is already a member of the channel, but they're having trouble locating the channel in their Slack instance.

You send them the channel name in a direct message (DM) so that they can search it in Slack, but they still cannot locate the channel.

What is the reason for this?

(Select the best answer.)

- A. The Slack Connect channel is private in the partner organization's workspace, so the employee cannot search for it.
- B. The employee of the partner organization is not a member of the Slack Connect channel.
- C. The employee of the partner organization does not have posting permissions in the channel.
- **D. The Slack Connect channel may have a different name in the partner organization's workspace.**

**Answer: D**

Explanation:

In Slack Connect, the same channel can have different names in each participating organization's workspace:

"Slack Connect channels may appear with different names in each organization. Members need to search by the name it appears in their own workspace." Therefore, even though you sent the channel name from your side, the user on the partner organization side needs to find it by the name assigned in their workspace. It is not an issue of membership (A), posting permissions (C), or privacy settings (B) in this case.

(Reference: Slack Administration Study Guide - Slack Connect Channel Management)

### NEW QUESTION # 58

.....

Our Slack-Admn-201 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening in the world.
