Identifying essential resources, including key team members, lays the foundation for a successful rollout. OGL Cloud Service activation is a critical step, allowing organizations to manage users within the OGL console, ensuring secure and streamlined access. Proper documentation is essential for content building, testing, and customization, forming the basis for a structured and scalable deployment.
Topic 2	• Project Phase 2: Refine: At this stage, organizations refine their project scope, estimate timelines, and ensure alignment with strategic objectives. Selecting appropriate OGL content from libraries helps tailor learning materials to organizational needs. Deployment considerations, including defining the environment, test users, and data requirements, ensure a robust testing phase before full implementation. The process of building, testing, and customizing OGL content is refined to optimize effectiveness. Planning for optional activities, such as activation and role conditions or display groups, ensures flexibility and adaptability in deployment.
Topic 3	• Continuous Improvement: Mature: Ongoing refinement is essential for maintaining the effectiveness of OGL content. NEW QUESTION # 19
Which definition describes the OGL deployment approach value of "Agile"?

- A. Enable your users to see the path forward with more confidence.
- B. Ensure your digital transformation initiatives can grow with your business.
- C. Support you and your organization in meeting your business objectives.

Answer: A

Explanation:
The "Agile" value in OGL's deployment approach emphasizes iterative progress and user confidence in navigating the system, aligning with option A. Options B and C are broader goals but less specific to Agile's focus on adaptability and visibility.

NEW QUESTION # 20
Which phase includes publishing new and updated OGL content activities?

- A. Publish
- B. Test
- C. Update
- D. Prepare

Answer: A

Explanation:
The Publish phase is dedicated to publishing new and updated OGL content (option D), making it available in production after testing and updates. Test (option A) validates content, Prepare (option B) plans for changes, and Update (option C) modifies content-none involve deployment. Publish finalizes the cycle, ensuring users access the latest, approved guides, marking the culmination of prior efforts.

NEW QUESTION # 21

Before provisioning OGL items to your content, what OGL feature allows you to provide a quick, visual summary of a process guide?

- A. Step guide
- B. Analytics report
- C. Flow chart
- D. Display group

Answer: C

Explanation:

A Flow chart (option A) provides a quick, visual summary of a process guide, illustrating steps and flow before provisioning. Display groups (option B) organize content, Step guides (option C) detail instructions, and Analytics reports (option D) analyze usage-none offer a visual process overview. Flow charts aid in planning and review, offering a clear, diagrammatic representation of workflows.

NEW QUESTION # 22

Where in the OGL console can users provide step-level feedback on a guide?

- A. In the Guide or Step Comments fields within the Content Editor
- B. In the feedback field within the Feedback Analytics dashboard
- C. In the Step Settings section of the Full Editor
- D. In the Description field of the Guide Settings modal

Answer: A

Explanation:

In the OGL console, step-level feedback is provided directly within the Content Editor, specifically in the Guide or Step Comments fields. This allows users to annotate specific steps or the entire guide during development or review, ensuring detailed and contextual feedback. The Feedback Analytics dashboard (option A) is for analyzing feedback trends, not submitting it. Step Settings (option C) adjusts configurations, and the Description field in Guide Settings (option D) is for metadata, not feedback. The Content Editor is the correct tool for this purpose.

NEW QUESTION # 23

Preparing end users to look for help in OGL and preparing support contacts to guide users with OGL are best practices during which activity?

- A. OGL kickoff
- B. Refine phase
- C. Hypercare

Answer: C

Explanation:

Hypercare, the post-launch support period, is when best practices like preparing end users to use OGL's help features and training support contacts to assist with OGL are implemented. This phase focuses on smoothing the transition to live use, ensuring users know where to find assistance and support staff are equipped to guide them. The Refine phase (option A) is for content optimization, not user preparation, and the OGL kickoff (option C) is for project initiation, not post-launch support. Hypercare's emphasis on immediate user enablement and support readiness makes it the ideal context for these activities, ensuring a seamless go-live experience.
