## **100% Pass Reliable Appian - ACD201 - Appian Senior Developer Latest Test Materials**

We follow the career ethic of providing the first-class ACD201 exam materials for you. Because we endorse customers' opinions and drive of passing the ACD201 certificate, so we are willing to offer help with full-strength. With years of experience dealing with ACD201 Actual Exam, we have thorough grasp of knowledge which appears clearly in our ACD201 practice questions. All exam questions you should know are written in them with three versions to choose from.

### **Appian Senior Developer Sample Questions (Q79-Q84):**

#### **NEW QUESTION # 79**

You are reviewing application performance-related issues reported by users.

As part of this activity, you need to check interface performance, expression rules performance, and process model performance. Match each statement to the option that best describes where you can view this information.

Note: Each object or view will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list

Average lag time and average completion time of the tasks in a process.

Select a match:

- Process Sizing sheet in the Health Check
- Process Model Metrics Tab in the "Monitoring" view
- Default Process Model Optimization Metrics Report**
- Default Process Optimization Metrics Report

Potential issues in a process model.

Select a match:

- Process Sizing sheet in the Health Check
- Process Model Metrics Tab in the "Monitoring" view
- Default Process Model Optimization Metrics Report**
- Default Process Optimization Metrics Report

Realtime average process instance memory.

Select a match:

- Process Sizing sheet in the Health Check
- Process Model Metrics Tab in the "Monitoring" view
- Default Process Model Optimization Metrics Report**
- Default Process Optimization Metrics Report

Actual lag time and actual completion time of the tasks in a process.

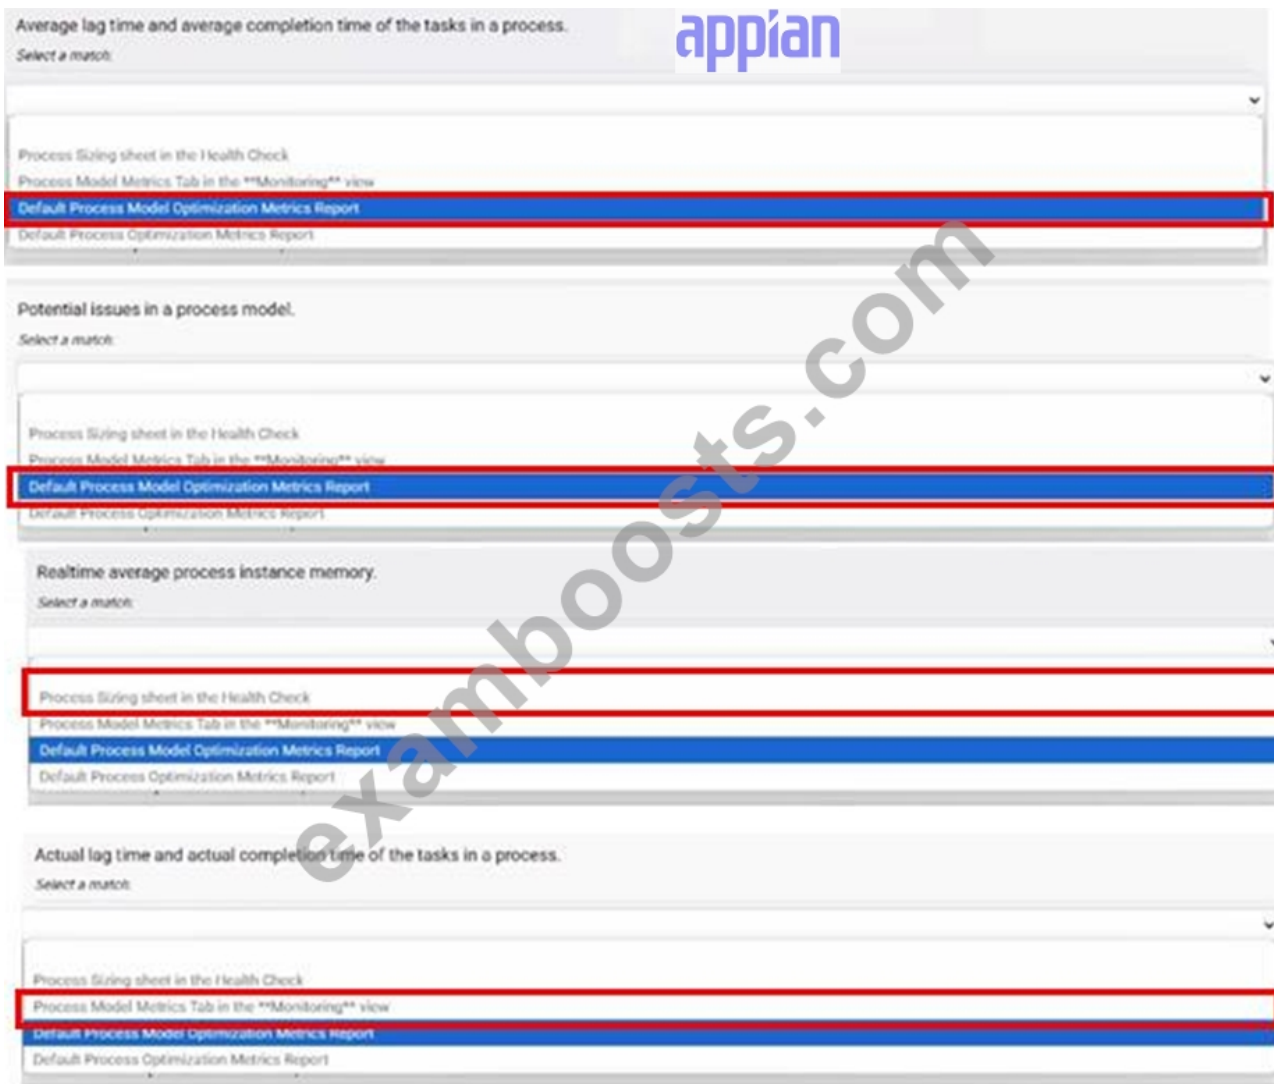

Select a match:

- Process Sizing sheet in the Health Check
- Process Model Metrics Tab in the "Monitoring" view
- Default Process Model Optimization Metrics Report**
- Default Process Optimization Metrics Report

appian

Answer:

Explanation:

**NEW QUESTION # 80**

You need to display information for pending tasks for each individual in an application. The tasks may be for a single specific application.

Which context type should you select for the Task Report Type?

- A. Tasks by process model
- B. Tasks attributed to user
- B Tasks by process

**Answer: B**

Explanation:

"Tasks attributed to user" is the correct context type, as it allows you to display pending tasks assigned to each individual in the application.

**NEW QUESTION # 81**

Your client wants their customers to be able to schedule appointments directly from their website without going to an Appian user environment.

You need to build an embedded interface to be added to your client's web page. The style of the embedded interface should be consistent with the host web page.

Which three custom styling options can be configured in the Themes section of embedded interfaces? (Choose three.)

- A. Asymmetrical layout
- B. Web font stylesheet URL

- C. Page background color
- D. Two or three column layout
- E. Font Family

**Answer: B,C,E**

Explanation:

Page background color - You can customize the background color to match the host webpage's theme.

Font family - You can set the font family to ensure the embedded interface aligns with the client's branding.

Web font stylesheet URL - This allows the use of custom web fonts, further aligning the style with the host site.

#### NEW QUESTION # 82

You need to add test cases to an existing expression rule in the system. Expression rule gives a complex data type value as an output result.

The test case should pass only when a field in the resultant data matches with a specific value mentioned.

How should you configure the test case assertion?

- A. Assertion expression evaluates to True.
- B. Test output matches the asserted output.
- C. Test completes without errors.

**Answer: A**

Explanation:

Configuring the test case assertion so that the assertion expression evaluates to True allows you to specifically check whether the desired field in the complex data type result matches the required value.

#### NEW QUESTION # 83

You're creating a point-of-sale (POS) system for a customer which can associate the items in a transaction to a customer based on a membership number. The item stock table and the customer sales record are hosted elsewhere and need to be written to via POST APIs from an Appian process model. This all occurs within a transaction process model that you're creating.

Which two steps should you perform to design your process model to improve process memory? (Choose two.)

- A. Create the two POST APIs as synchronous subprocesses.
- B. Add a terminate process node to the end of the process.
- C. Ensure that the entire process is activity-chained so that the person entering the transaction knows when the process is completed.
- D. Create the two POST APIs as asynchronous subprocesses.

**Answer: B,D**

Explanation:

Creating the POST API calls as asynchronous subprocesses allows them to run independently, reducing memory usage in the main process.

Adding a terminate process node at the end ensures the process completes and releases memory as soon as its work is finished.

#### NEW QUESTION # 84

.....

The passing rate of our ACD201 training quiz is high as 98% to 100% and the hit rate is also high. Our professional expert team seizes the focus of the exam and chooses the most important questions and answers which has simplified the important information and follow the latest trend to make the client learn easily and efficiently on our ACD201 Study Guide. YOU can also free download the demos of our ACD201 learning materials to have a check.
