In the era of rapid changes in the knowledge economy, do you worry that you will be left behind? Let's start by passing the UiPath-ADPv1 exam. Getting a UiPath-ADPv1 certificate is something that many people dream about and it will also bring you extra knowledge and economic benefits. The UiPath-ADPv1 latest question we provide all candidates that that is compiled by experts who have good knowledge of exam, and they are very experience in compile study materials. Not only that, our team checks the update every day, in order to keep the latest information of UiPath-ADPv1 Exam Question.

UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
Topic 2	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
Topic 3	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.

Topic 4	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.

Unparalleled UiPath-ADPv1 Reliable Study Guide - 100% Pass UiPath-ADPv1 Exam

With our UiPath-ADPv1 practice test software, you can simply assess yourself by going through the UiPath-ADPv1 practice tests. We highly recommend going through the UiPath-ADPv1 answers multiple times so you can assess your preparation for the UiPath (ADPv1) Automation Developer Professional. Make sure that you are preparing yourself for the UiPath-ADPv1 test with our practice test software as it will help you get a clear idea of the real UiPath-ADPv1 exam scenario. By passing the exams multiple times on practice test software, you will be able to pass the real UiPath-ADPv1 test in the first attempt.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q177-Q182):

NEW QUESTION # 177
In which scenarios can the Add Attachment option in UiPath.WebAPI.Activities.HttpClient be enabled?

- A. Only when the Request Method is set to GET or DELETE.
- B. Only when the Request Method is set to HEAD or OPTIONS.
- C. Only when the Request Method is set to POST or PUT.
- D. Only when the Authentication protocol is set to OAuth1 or OAuth2.

Answer: C

Explanation:
TheAdd Attachmentoption is available in theUiPath.WebAPI.Activities.HttpClientactivityonly when using POST or PUT methods, as these methods are designed for sending data (such as files or form data) to the server. GET, DELETE, HEAD, and OPTIONS methods do not support body content in the same way and are typically used for retrieval or metadata operations.
Reference:UiPath Web API Activities Guide > HTTP Request Activity > Request Configuration

NEW QUESTION # 178
A developer is building a process that types data into input fields using the Hardware Events input method.
Which property of the Type Into activity should be modified to reduce the pace at which the input string characters are typed into the fields?

- A. Alter disabled element
- B. Delay before
- C. Delay between keys
- D. Delay after

Answer: C

Explanation:
To reduce the pace at which the input string characters are typed into the fields using the Hardware Events input method, the developer should modify the Delay between keys property of the Type Into activity. This property specifies the delay time (in milliseconds) between two keystrokes. The default value is 10 milliseconds. The maximum value is 1000 milliseconds. By increasing the value of this property, the developer can slow down the typing speed and avoid any errors or missed characters. For example, if the developer sets the Delay between keys property to 100 milliseconds, the activity will wait for 0.1 seconds before typing each character of the input string. NEW QUESTION # 179

Review the following graphics:

If the automation is executed and Notepad.exe is not running, which Log Message text value is contained in the Output panel?

- A. SelectorNotFoundException
- B. Exception
- C. ApplicationNotFoundException
- D. Try

Answer: C

Explanation:
The graphics show a UiPath workflow that contains a Try Catch activity with a Type Into activity inside the Try block and a Log Message activity inside the Catch block. The Type Into activity is configured to type "Typing into Notepad" into a Notepad window with the selector "<wnd app='notepad.exe' cls='Notepad' title='Untitled - Notepad' />". The Log Message activity is configured to log the exception message in the Output panel.

If the automation is executed and Notepad.exe is not running, the Type Into activity will fail to find the target UI element and throw an exception. The exception will be caught by the Catch block and the Log Message activity will log the exception message in the Output panel. The exception message will contain the name of the exception type, which is ApplicationNotFoundException. This exception is thrown when the application that is specified in the selector is not found or not running. Therefore, the Log Message text value that is contained in the Output panel is ApplicationNotFoundException.

The other options are not correct, as they are not the exception type that is thrown by the Type Into activity when the application is not running. Option A is incorrect, because Exception is a generic term for any error or problem that occurs during the execution of a program, not a specific exception type. Option C is incorrect, because Try is not an exception type, but a keyword that marks the beginning of a block of code that may throw an exception. Option D is incorrect, because SelectorNotFoundException is not an exception type, but a possible error message that is displayed when the selector is invalid or does not match any UI element.

ApplicationNotFoundException Class - UiPath Documentation Portal

NEW QUESTION # 180
What can be verified in the InltAIISettlngsTestCase test case?

- A. Verify If a certain application is open in the execution environment.
- B. Verify the naming of a certain key present in the 'Config' dictionary.
- C. Verify the variable type for the 'Config' dictionary.
- D. Verify If a certain key is present in the 'Config' dictionary.

Answer: D

Explanation:
In the InitAllSettingsTestCase test case, one of the verifications that can be done is to check if a certain key is present in the 'Config' dictionary. This ensures that necessary configurations are available for the process.

NEW QUESTION # 181
What is the correct execution order of the State activity sections?
instructions: Drag the Description found on the "Left" and drop on the correct Execution Order found on the "Right"

Answer:

Explanation:

NEW QUESTION # 182
......

With the rapid development of the economy, the demands of society on us are getting higher and higher. If you can have UiPath-ADPv1 certification, then you will be more competitive in society. Our UiPath-ADPv1 study materials will help you get the

according certification. Believe me, after using our UiPath-ADPv1 Study Materials, you will improve your work efficiency. Our UiPath-ADPv1 free training materials will make you more prominent in the labor market than others, and more opportunities will take the initiative to find you.
