Hot Professional-Cloud-Database-Engineer Testdump | Pass-Sure Google Professional-Cloud-Database-Engineer: Google Cloud Certified - Professional Cloud Database Engineer 100% Pass

Keeping in view, the time constraints of professionals, our experts have devised Professional-Cloud-Database-Engineer dumps PDF that suits your timetable and meets your exam requirements adequately. It is immensely helpful in enhancing your professional skills and expanding your exposure within a few-day times. This Google Cloud Certified brain dumps exam testing tool introduces you not only with the actual exam paper formation but also allows you to master various significant segments of the Professional-Cloud-Database-Engineer syllabus.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q31-Q36):

NEW QUESTION # 31

You are the primary DBA of a Cloud SQL for PostgreSQL database that supports 6 enterprise applications in production. You used Cloud SQL Insights to identify inefficient queries and now need to identify the application that is originating the inefficient queries. You want to follow Google-recommended practices. What should you do?

- A. Use query tags to add application-centric database monitoring.
- B. Shut down and restart each application.
- C. Write a utility to scan database query logs.
- D. Write a utility to scan application logs.

Answer: A

Explanation:

https://cloud.google.com/sql/docs/postgres/using-query-insights#filter_by_query_tags

NEW QUESTION # 32

Your team is running a Cloud SQL for MySQL instance with a 5 TB database that must be available 24/7. You need to save database backups on object storage with minimal operational overhead or risk to your production workloads. What should you do?

- A. Use the mysqldump utility on the primary database instance to export the backup.
- B. Create a read replica, and then use the mysqldump utility to export each table.
- C. Use Cloud SQL serverless exports.
- D. Clone the Cloud SQL instance, and then use the mysqldump utility to export the data.

Answer: C

Explanation:

<https://cloud.google.com/blog/products/databases/introducing-cloud-sql-serverless-exports>

NEW QUESTION # 33

You are configuring a new application that has access to an existing Cloud Spanner database. The new application reads from this database to gather statistics for a dashboard. You want to follow Google-recommended practices when granting Identity and Access Management (IAM) permissions. What should you do?

- A. Create a new service account, and grant it the spanner.databases.select permission.
- B. Reuse the existing service account that populates this database.
- C. Create a new service account, and grant it the Cloud Spanner Database Admin role.
- D. Create a new service account, and grant it the Cloud Spanner Database Reader role.

Answer: C

NEW QUESTION # 34

Your organization is migrating 50 TB Oracle databases to Bare Metal Solution for Oracle. Database backups must be available for quick restore. You also need to have backups available for 5 years. You need to design a cost-effective architecture that meets a recovery time objective (RTO) of 2 hours and recovery point objective (RPO) of 15 minutes. What should you do?

- **A. Create the database on a Bare Metal Solution server with the database running on flash storage. Keep a local backup copy on standard storage. Keep backups older than one day stored in Actifio OnVault storage.**
- B. Create the database on a Bare Metal Solution server with the database running on flash storage. Keep a local backup copy on all flash storage. Use the Oracle Recovery Manager (RMAN) backup utility to move backups older than one day to an Archive Storage bucket.
- C. Create the database on a Bare Metal Solution server with the database running on flash storage. Keep a local backup copy on all flash storage. Keep backups older than one day stored in Actifio OnVault storage.
- D. Create the database on a Bare Metal Solution server with the database running on flash storage. Keep a local backup copy on standard storage. Use the Oracle Recovery Manager (RMAN) backup utility to move backups older than one day to a Coldline Storage bucket.

Answer: A

Explanation:

This answer meets the RTO and RPO requirements by using flash storage for the database and standard storage for the local backup copy. It also meets the cost-effectiveness requirement by using Actifio OnVault storage, which is a low-cost, high-performance, and scalable storage solution that integrates with Google Cloud Backup and DR Service1.

NEW QUESTION # 35

Your organization has strict policies on tracking rollouts to production and periodically shares this information with external auditors to meet compliance requirements. You need to enable auditing on several Cloud Spanner databases. What should you do?

- **A. Use Liquibase to roll out changes to higher environments.**
- B. Manually capture detailed DBA audit logs when changes are rolled out to higher environments.
- C. Use replication to roll out changes to higher environments.
- D. Use backup and restore to roll out changes to higher environments.

Answer: A

Explanation:

To satisfy audit reporting you would need a way to record what was changed and when. The best answer is one which uses some kind of source code control system (SCCS). That rules out A and B. Any mention of anything manual in a cloud environment should look suspicious, which leaves option C. As it happens, Liquibase is an SCCS and can be integrated with Spanner.
