

100% Pass Amazon - AWS-Solutions-Architect-Associate - AWS Certified Solutions Architect - Associate (SAA-C03) Updated Exam Study Solutions

2026 Latest VerifiedDumps AWS-Solutions-Architect-Associate PDF Dumps and AWS-Solutions-Architect-Associate Exam Engine Free Share: https://drive.google.com/open?id=1qpdS1E_jC1cUeiJ2mAjWrdLwS99DwDNN

Amazon AWS-Solutions-Architect-Associate study material of "VerifiedDumps" is available in three different formats: PDF, desktop-based practice test software, and a browser-based practice AWS-Solutions-Architect-Associate exam questions. AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) practice tests are a great way to gauge your progress and identify weak areas for further study. Check out features of these formats.

The AWS Certified Solutions Architect - Associate (SAA-C02) exam is a certification offered by Amazon Web Services (AWS) for individuals who want to demonstrate their expertise in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. AWS Certified Solutions Architect - Associate (SAA-C03) certification exam validates the skills and knowledge required to architect and deploy secure and robust applications on AWS technologies. AWS-Solutions-Architect-Associate Exam is intended for professionals who have experience with AWS services and have a good understanding of architectural principles.

AWS-Solutions-Architect-Associate – 100% Free Exam Study Solutions | Useful AWS Certified Solutions Architect - Associate (SAA-C03) Valid Test Dumps

Our AWS-Solutions-Architect-Associate study materials can help you achieve your original goal and help your work career to be smoother and your family life quality to be better and better. There is no exaggeration to say that you will be confident to take part in you AWS-Solutions-Architect-Associate exam with only studying our AWS-Solutions-Architect-Associate practice torrent for 20 to 30 hours. And we can ensure your success for we have been professional in this career for over 10 years. And thousands of candidates have achieved their dreams and ambitions with the help of our outstanding AWS-Solutions-Architect-Associate training materials.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q362-Q367):

NEW QUESTION # 362

A company built a food ordering application that captures user data and stores it for future analysis. The application's static front end is deployed on an Amazon EC2 instance. The front-end application sends the requests to the backend application running on separate EC2 instance. The backend application then stores the data in Amazon RDS. What should a solutions architect do to decouple the architecture and make it scalable?

- A. Use Amazon S3 to serve the static front-end application and send requests to Amazon API Gateway which writes the requests to an Amazon SQS queue. Place the backend instances in an Auto Scaling group and scale based on the queue depth to process and store the data in Amazon RDS.
- B. Use an EC2 instance to serve the front end and write requests to an Amazon SQS queue. Place the backend instance in an Auto Scaling group and scale based on the queue depth to process and store the data in Amazon RDS.
- C. Use Amazon S3 to serve the front-end application and write requests to an Amazon Simple Notification Service (Amazon SNS) topic. Subscribe Amazon EC2 instances to the HTTP/HTTPS endpoint of the topic and process and store the data in Amazon RDS.

- D. Use Amazon S3 to serve the front-end application which sends requests to Amazon EC2 to execute the backend application The backend application will process and store the data in Amazon RDS

Answer: A

NEW QUESTION # 363

A rapidly growing global ecommerce company is hosting its web application on AWS. The web application includes static content and dynamic content. The website stores online transaction processing (OLTP) data in an Amazon RDS database. The website's users are experiencing slow page loads.

Which combination of actions should a solutions architect take to resolve this issue? (Select TWO.)

- A. Configure a Multi-AZ deployment for the RDS DB instance
- **B. Set up an Amazon CloudFront distribution**
- C. Host the dynamic web content in Amazon S3
- D. Configure an Amazon Redshift cluster.
- **E. Create a read replica for the RDS DB instance.**

Answer: B,E

Explanation:

Explanation

To resolve the issue of slow page loads for a rapidly growing e-commerce website hosted on AWS, a solutions architect can take the following two actions:

1. Set up an Amazon CloudFront distribution
2. Create a read replica for the RDS DB instance

Configuring an Amazon Redshift cluster is not relevant to this issue since Redshift is a data warehousing service and is typically used for the analytical processing of large amounts of data.

Hosting the dynamic web content in Amazon S3 may not necessarily improve performance since S3 is an object storage service, not a web application server. While S3 can be used to host static web content, it may not be suitable for hosting dynamic web content since S3 doesn't support server-side scripting or processing.

Configuring a Multi-AZ deployment for the RDS DB instance will improve high availability but may not necessarily improve performance.

NEW QUESTION # 364

The one-time payment for Reserved Instances is _____ refundable if the reservation is cancelled.

- A. in some circumstances
- B. always
- **C. never**

Answer: C

NEW QUESTION # 365

A company hosts an application on multiple Amazon EC2 instances. The application processes messages from an Amazon SQS queue, writes to an Amazon RDS table, and deletes the message from the queue. Occasional duplicate records are found in the RDS table. The SQS queue does not contain any duplicate messages. What should a solutions architect do to ensure messages are being processed once only?

- **A. Use the ChangeMessageVisibility API call to increase the visibility timeout**
- B. Use the AddPermission API call to add appropriate permissions
- C. Use the CreateQueue API call to create a new queue
- D. Use the ReceiveMessage API call to set an appropriate wait time.

Answer: A

NEW QUESTION # 366

A company needs to create a compliance management solution. The company wants to use a combination of AWS services to achieve the fine-grained visibility that the solution requires. The compliance management solution must provide a centralized method for company employees to review security findings and out-of-compliance findings. Which solution will meet these requirements with the LEAST ongoing maintenance?

- A. Configure AWS Systems Manager to provide a centralized dashboard. Use conformance packs in AWS Config to check for compliance framework misalignment.
- B. Use AWS Marketplace to purchase a security tool. Install the tool on an Amazon EC2 instance. Assign an EC2 Instance Profile for the tool to gather data from AWS resources.
- **C. Configure AWS Security Hub to centralize findings. Use conformance packs in AWS Config to check for compliance framework misalignment.**
- D. Configure AWS Security Hub to centralize findings. Use conformance packs in Amazon Inspector to check for compliance framework misalignment.

Answer: C

Explanation:

AWS Security Hub provides a centralized view of security findings across AWS accounts and services. It integrates natively with AWS Config conformance packs, which evaluate compliance against industry standards such as CIS and PCI-DSS.

From AWS Documentation:

"AWS Security Hub aggregates, organizes, and prioritizes security alerts and compliance status across AWS accounts. Use AWS Config conformance packs to assess compliance with security frameworks." (Source: AWS Security Hub User Guide - Managing Findings and Compliance) Why C is correct:

Security Hub provides a centralized dashboard for compliance visibility.

Conformance packs in AWS Config automate compliance checks across accounts.

Fully managed, minimal maintenance, and integrates natively with AWS services.

Why others are incorrect:

A: Conformance packs are not a feature of Amazon Inspector.

B: Third-party tools on EC2 require management and add operational overhead.

D: Systems Manager is not designed for compliance aggregation.
