

Reliable DP-700 Exam Online - Hot DP-700 Test Passing Score and Effective Actual Implementing Data Engineering Solutions Using Microsoft Fabric Tests

DOWNLOAD the newest Actual4Dumps DP-700 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1cAQAfGLT8WoaA37VMwWa-jR6mrkMtHLt>

Actual4Dumps resolves your issue and provides you with an updated and actual Microsoft DP-700 Practice Test. You can successfully prepare for the DP-700 exam in a short time with the help of our latest exam questions. Our DP-700 Questions are original and help you concentrate on the key domains of the Implementing Data Engineering Solutions Using Microsoft Fabric certification exam. Therefore, you can save time and ace the test by practicing with these updated DP-700 exam questions.

Microsoft DP-700 Exam Syllabus Topics:

Topic	Details
Topic 1	• Ingest and transform data: This section of the exam measures the skills of Data Engineers that cover designing and implementing data loading patterns. It emphasizes preparing data for loading into dimensional models, handling batch and streaming data ingestion, and transforming data using various methods. A skill to be measured is applying appropriate transformation techniques to ensure data quality.
Topic 2	• Monitor and optimize an analytics solution: This section of the exam measures the skills of Data Analysts in monitoring various components of analytics solutions in Microsoft Fabric. It focuses on tracking data ingestion, transformation processes, and semantic model refreshes while configuring alerts for error resolution. One skill to be measured is identifying performance bottlenecks in analytics workflows.
Topic 3	• Implement and manage an analytics solution: This section of the exam measures the skills of Microsoft Data Analysts regarding configuring various workspace settings in Microsoft Fabric. It focuses on setting up Microsoft Fabric workspaces, including Spark and domain workspace configurations, as well as implementing lifecycle management and version control. One skill to be measured is creating deployment pipelines for analytics solutions.

Proven and Instant Method to Pass Microsoft DP-700 Exam

Especially for those students who are headaches when reading a book, DP-700 study tool is their gospel. Because doing exercises will make it easier for one person to concentrate, and at the same time, in the process of conducting a mock examination to test yourself, seeing the improvement of yourself will makes you feel very fulfilled and have a stronger interest in learning. DP-700 Guide Torrent makes your learning process not boring at all.

Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q32-Q37):

NEW QUESTION # 32

You have two Fabric workspaces named Workspace1 and Workspace2.

You have a Fabric deployment pipeline named deployPipeline1 that deploys items from Workspace1 to Workspace2.

DeployPipeline1 contains all the items in Workspace1.

You recently modified the items in Workspaces1.

The workspaces currently contain the items shown in the following table.

Items in Workspace1 that have the same name as items in Workspace2 are currently paired.

You need to ensure that the items in Workspace1 overwrite the corresponding items in Workspace2. The solution must minimize effort.

What should you do?

- A. Delete all the items in Workspace2, and then run deployPipeline1.
- B. Rename each item in Workspace2 to have the same name as the items in Workspace1.
- **C. Run deployPipeline1 without modifying the items in Workspace2.**
- D. Back up the items in Workspace2, and then run deployPipeline1.

Answer: C

Explanation:

When running a deployment pipeline in Fabric, if the items in Workspace1 are paired with the corresponding items in Workspace2 (based on the same name), the deployment pipeline will automatically overwrite the existing items in Workspace2 with the modified items from Workspace1. There's no need to delete, rename, or back up items manually unless you need to keep versions. By simply running deployPipeline1, the pipeline will handle overwriting the existing items in Workspace2 based on the pairing, ensuring the latest version of the items is deployed with minimal effort.

NEW QUESTION # 33

You need to ensure that the data engineers are notified if any step in populating the lakehouses fails. The solution must meet the technical requirements and minimize development effort.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 34

You have a Fabric F32 capacity that contains a workspace. The workspace contains a warehouse named DW1 that is modelled by using MD5 hash surrogate keys.

DW1 contains a single fact table that has grown from 200 million rows to 500 million rows during the past year.

You have Microsoft Power BI reports that are based on Direct Lake. The reports show year-over-year values.

Users report that the performance of some of the reports has degraded over time and some visuals show errors.

You need to resolve the performance issues. The solution must meet the following requirements:

Provide the best query performance.

Minimize operational costs.

Which should you do?

- A. Change the MD5 hash to SHA256.
 - **B. Modify the surrogate keys to use a different data type.**
 - C. Create views.
 - D. Increase the capacity.
- C Enable V-Order

Answer: B

Explanation:

In this case, the key issue causing performance degradation likely stems from the use of MD5 hash surrogate keys. MD5 hashes are 128-bit values, which can be inefficient for large datasets like the 500 million rows in your fact table. Using a more efficient data type for surrogate keys (such as integer or bigint) would reduce the storage and processing overhead, leading to better query performance. This approach will improve performance while minimizing operational costs because it reduces the complexity of querying and indexing, as smaller data types are generally faster and more efficient to process.

NEW QUESTION # 35

You are building a data loading pattern by using a Fabric data pipeline. The source is an Azure SQL database that contains 25 tables. The destination is a lakehouse.

In a warehouse, you create a control table named ControlObject as shown in the exhibit. (Click the Exhibit tab.) You need to build a data pipeline that will support the dynamic ingestion of the tables listed in the control table by using a single execution.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

NEW QUESTION # 36

You have an Azure key vault named KeyVault1 that contains secrets.

You have a Fabric workspace named Workspace-!. Workspace! contains a notebook named Notebook1 that performs the following tasks:

- * Loads stage data to the target tables in a lakehouse

- * Triggers the refresh of a semantic model

You plan to add functionality to Notebook1 that will use the Fabric API to monitor the semantic model refreshes. You need to retrieve the registered application ID and secret from KeyVault1 to generate the authentication token.

Solution: You use the following code segment:

Use notebookutils.credentials.getSecret and specify the key vault URL and key vault secret. Does this meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION # 37

.....

Our DP-700 exam preparation materials have a higher pass rate than products in the same industry. If you want to pass DP-700 certification, then it is necessary to choose a product with a high pass rate. Our DP-700 study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. The 99% pass rate is the proud result of our DP-700 Study Materials. I believe that pass rate is also a big criterion for your choice of products, because your ultimate goal is to obtain DP-700 certification.
