- A. Configuration exports can be imported on other machines with StoreFront installed.
- B. Only a partial configuration of StoreFront can be exported.
- C. StoreFront configuration exports can include only single server deployments and NOT server group configurations.
- D. Configuration on a StoreFront server will NOT be overwritten completely by the imported settings.

Answer: A

NEW QUESTION # 178

Which two considerations should a Citrix Engineer be aware of when creating application layers with Citrix App Layering? (Choose two.)

- A. Install the appropriate hypervisor tools on the packaging machine at the same time the applications are installed.
- B. There is no support for applications that require prerequisites in order to operate.
- C. Applications should be installed onto the packaging machine from an ISO or a fileshare location.
- D. Cross-talk between application layers is NOT supported after they are published in Citrix App Layering.
- E. Windows and Application updates should be turned off.

Answer: C,E

Explanation:

Explanation

- Install apps from a share or an ISO versus downloading them to the desktop to keep layer size to a minimum.
- Turn off automatic updates for applications. If automatic updates are left on, the updates will be put into the personalization layer. -
- If this happens, you can use the "reinstall" feature to take back control of the application, and clearing the personalization layer of these conflicts/updates. - When installing an application that requires being part of a domain, it is ok to add the installation machine to the domain. -- After installing the application, remove the installation machine from the domain. -- Clean up the left over computer object in active directory - Installation machines can be added to View pools. Remember to remove them before finalizing the layer. This will prevent View certificate information from being saved in the layer.

NEW QUESTION # 179
