

ISTQB-CTFL Test Valid, Key ISTQB-CTFL Concepts

What's more, part of that TestValid ISTQB-CTFL dumps now are free: <https://drive.google.com/open?id=1gC3gtVSpGHHsYSIFIH6e7zcb8tEEUwIW>

Maybe you still strange to our ISTQB-CTFL dumps pdf, you can download the free demo of the dump torrent before you buy. If you have any questions to our ISTQB exam questions torrent, please feel free to contact us and we will give our support immediately. You will be allowed to updating ISTQB-CTFL Learning Materials one-year once you bought pdf dumps from our website.

According to different kinds of questionnaires based on study condition among different age groups, our ISTQB-CTFL test prep is totally designed for these study groups to improve their capability and efficiency when preparing for ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL Exams, thus inspiring them obtain the targeted ISTQB ISTQB-CTFL certificate successfully.

Key ISTQB-CTFL Concepts | Actual ISTQB-CTFL Test

According to our investigation, the test syllabus of the ISTQB-CTFL exam is changing every year. Some new knowledge will be added into the annual real exam. Some old knowledge will be deleted. So you must have a clear understanding of the test syllabus of the ISTQB-CTFL study materials. Now, you can directly refer to our study materials. Our experts have carefully researched each part of the test syllabus of the ISTQB-CTFL Study Materials. Then they compile new questions and answers of the study materials according to the new knowledge parts.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which ONE of the following options MOST ACCURATELY describes branch testing?

- A. In branch testing, the coverage items are executable decisions. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved. Coverage is expressed as a percentage.
- B. In branch testing, the coverage items are branches, and the aim is to design test cases to exercise branches in the code until an acceptable level of coverage is achieved. Coverage is measured as the number of branches exercised by the test cases divided by the total number of branches expressed as a percentage.
- C. In branch testing, the coverage items are executable statements. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved, expressed as a percentage.
- D. In branch testing, the coverage items are control flow transfers between decisions, and the aim is to design test cases to exercise flow transfers in the code until an acceptable level of coverage is achieved. Coverage is measured as the number of branches exercised by the test cases divided by the total number of branches expressed as a percentage.

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Branch testing is a structural testing technique that ensures each branch (decision point) in the control flow is executed at least once. The goal is to measure branch coverage, which is the number of branches exercised divided by the total number of branches.

(A) describes statement testing, not branch testing.

(B) and (D) introduce confusion between decisions and statements, whereas branch testing focuses on control flow branches.

In simple terms, branch testing checks that all possible decision outcomes (true/false) are executed, whereas statement testing only ensures that each line of code is executed.

NEW QUESTION # 77

Your organization's test strategy states that it is desirable to use more than one method for estimating test effort. You are responsible for estimating test effort for the next project. Based on historical data, the development-to-test effort ratio is 5:3.

The initial estimate for the development effort is 450 person-days.

Which ONE of the following options corresponds to the estimated test effort using the ratio-based method?

- A. 180 person-days
- B. 720 person-days
- C. 750 person-days
- **D. 270 person-days**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation: The ratio-based estimation method relies on historical relationships between development and testing effort.

Using the given 5:3 ratio:

$$\text{Test Effort} = \left(\frac{3}{5} \times \text{Development Effort} \right) = \left(\frac{3}{5} \times 450 \right) = 270 \text{ person-days}$$

Thus, the correct answer is 270 person-days (D).

* (A) and (C) are incorrect as they overestimate the effort.

* (B) underestimates the testing effort based on the ratio.

Ratio-based estimation helps allocate resources effectively based on past project data.

NEW QUESTION # 78

Which test level aims to gain the users' confidence in the system, especially in the fulfillment of the system's operational and performance capabilities?

- A. System testing
- B. System integration testing
- C. Component integration testing
- **D. Acceptance testing**

Answer: D

NEW QUESTION # 79

Given the following user story for the development of an online shoe store:

"As a customer, I want to be able to filter shoes by color so that I see, for example, only red shoes in the selection." Which of the following positive test cases BEST fits to the user story?

- A. Precondition: Home page of the shoe store is opened
Test steps to be performed:
User logs in with his customer ID.
Tick "green" in the color selection.
Click on the "Filter" button.
- B. Precondition: Home page of the shoe store is opened

Test steps to be performed:

Tick "red" in the color selection.

Click on the "Filter" button.

Expected result: Within 2 seconds all red shoes are displayed, then the other colors.

- C. Precondition: Home page of the shoe store is opened

Test steps to be performed:

Tick "red" in the color selection.

Click on the "Filter" button.

Expected result: Only red shoes are displayed.

- D. Precondition: Homepage of shoe store with shoes size 40 is opened

Test steps to be performed:

Tick "red" in the color selection.

Click on the "Filter" button.

Expected result: Only red shoes of size 40 are displayed.

Answer: C

Explanation:

Expected result: Only red shoes are displayed.

NEW QUESTION # 80

A system computes prices for bus tickets. The price depends on

- the passenger type (baby, child, adult, senior citizen, student, military)
- the travelling type (as single or in a group)
- the distance (zone 1. 2. 3)
- the kind of transport (ordinary, express)

Which of the following test techniques is the most appropriate one for testing the price computation?

- A. State transition testing
- B. Use case testing
- C. Statement coverage
- D. Equivalence partitioning

Answer: D

Explanation:

Equivalence partitioning is a technique that divides the input data and output results of a software component into partitions of equivalent data. Each partition should contain data that is treated in the same way by the component. Equivalence partitioning can be used to reduce the number of test cases by selecting one representative value from each partition. Equivalence partitioning is suitable for testing the price computation, as it can identify different partitions based on the passenger type, the travelling type, the distance and the kind of transport. Equivalence partitioning is not statement coverage, which is a technique that measures how many executable statements in a source code are executed by a test suite. Statement coverage is not appropriate for testing the price computation, as it does not consider the input data or output results. Equivalence partitioning is not state transition testing, which is a technique that models how a system transitions from one state to another depending on events or conditions. State transition testing is not relevant for testing the price computation, as it does not involve any states or transitions. Equivalence partitioning is not use case testing, which is a technique that tests how users interact with a system to achieve a specific goal. Use case testing is not applicable for testing the price computation, as it does not focus on a single function or component. NEW QUESTION # 81

.....

Simple and easy-to-understand words are used in the content of our ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL exam questions. It is one of the unique benefits of ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL exam material that is not common in other ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL. TestValid designed this ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL exam material to work in different systems.

Key ISTQB-CTFL Concepts: <https://www.testvalid.com/ISTQB-CTFL-exam-collection.html>

ISTQB ISTQB-CTFL Test Valid Full refund services make your purchase more confident, ISTQB ISTQB-CTFL Test Valid So we can promise all learners "No Pass, No Pay" "Once fail, Full Refund", You are the best, Providing you 100% actual brain training pdf for your ISTQB Key ISTQB-CTFL Concepts, ISTQB ISTQB-CTFL Test Valid So finding the perfect practice materials is pivotal for it.

Using HotSpot VM Serviceability Agent to analyze, triage, and ISTQB-CTFL resolve diverse HotSpot VM issues, Controller Redundancy Design, Full refund services make your purchase more confident.

So we can promise all learners "No Pass, No Pay" "Once fail, Full Refund", ISTQB-CTFL Valid Exam Sims You are the best, Providing you 100% actual brain training pdf for your ISTQB, So finding the perfect practice materials is pivotal for it.
