熱門的ASIS-PSP認證指南，免費下載ASIS-PSP考試指南得到妳想要的ASIS證書

NewDumps的IT專家團隊利用他們的經驗和知識不斷的提升考試培訓材料的品質，來滿足每位考生的需求，保證考生第一次參加ASIS ASIS-PSP認證考試順利的通過，你們通過購買NewDumps的產品總是能夠更快得到更新更準確的考試相關資訊，NewDumps的產品的覆蓋面很大很廣，可以為很多參加IT認證考試的考生提供方便，而且準確率100%，能讓你安心的去參加考試，並通過獲得認證。

最新的 Physical Security Professional ASIS-PSP 免費考試真題 (Q68-Q73):

問題 #68

In _____, air has been reduced or fuel is dwindling to the point where there is no visible flame, just an entire area filled with tremendous heat.

- A. Incipient stage
- B. Ignition stage
- C. Last stage

- **D. Smoldering burning**

答案： D

解題說明：

Smoldering burning is the final phase of a fire where visible flames are no longer present, but extreme heat persists. This occurs when the available fuel is nearly consumed, or oxygen is limited, creating a high- temperature environment without active flames. It poses a serious re-ignition risk.

Ignition stage (B) is the beginning of the fire.

Last stage (C) is too vague.

Incipient stage (D) refers to the early development before flames appear.

問題 #69

The purpose of methodical examination is to:

- **A. All of the above**
- B. Find deviations from established security standards and practices
- C. Find loopholes in security controls
- D. consider means of improving the efficiency or control of the operation without reducing security

答案： A

解題說明：

A methodical examination in security management serves multiple purposes:

Identifying deviations from policies and procedures

Detecting vulnerabilities or loopholes

Improving operational effectiveness while maintaining or enhancing security This approach is used in audits, inspections, and evaluations to enhance overall security posture without compromising performance.

問題 #70

The process of planning for response, recovery, and resumption activities for the infrastructure, critical processes and other elements is known as:

- A. Resource planning
- **B. Continuity planning**
- C. Contingent planning
- D. Resumption planning

答案： B

解題說明：

Continuity planning involves developing strategies and procedures to ensure that critical infrastructure, processes, and systems continue to function or are restored promptly after a disruption. It includes emergency response, crisis management, recovery, and resumption phases.

Contingent planning (A) is not a standard term.

Resource planning (C) focuses on allocation of resources, not continuity.

Resumption planning (D) is a subset of continuity planning.

問題 #71

Which of the following statements does not describe characteristics applicable to perimeter lighting?

- A. Lighting fixtures for perimeter illumination can be mounted on buildings and structures near the perimeter
- B. Floodlights and Fresnel lenses are often used to illuminate isolated fence boundaries
- C. Mounting height is a primary determinant of lighting levels outside the perimeter boundary
- D. Light should be directed toward the protected area

答案： D

解題說明：

In perimeter lighting, light should be directed away from the protected area (toward potential adversaries) to illuminate potential threats outside the fence or perimeter, making it easier to detect intrusions. Backlighting (placing the source behind the area being monitored) enhances visibility of trespassers without creating glare for security personnel.

A, C, and D correctly describe standard characteristics of perimeter lighting.

B incorrectly suggests the wrong direction for optimal lighting design.

問題 #72

Prior to performing an enterprise risk analysis, the security professional MUST first:

- A. Classify all risks
- B. Identify the assets to be protected
- C. Identify the threats
- D. Determine if adequate security exists

答案： B

解題說明：

Before an enterprise risk analysis can be properly conducted, the security professional must first identify the assets to be protected. These may include people, property, information, and operations. Only after defining what needs protection can threats, vulnerabilities, and risks be effectively evaluated.

A (Identify threats) comes after asset identification.

C (Classify risks) and D (Determine security adequacy) are later stages in the risk management process.
