

# GH-500 Exam Pass4sure | GH-500 Latest Practice Materials

2025 Latest Prep4cram GH-500 PDF Dumps and GH-500 Exam Engine Free Share: <https://drive.google.com/open?id=1pW6NLLSsFN8TwAq54f5vXJagnZxeJHUI>

Many people prefer to buy our GH-500 valid study guide materials because they deeply believe that if only they buy them can definitely pass the GH-500 test. The reason why they like our GH-500 guide questions is that our study materials' quality is very high and the service is wonderful. For years we always devote ourselves to perfecting our GH-500 Study Materials and shaping our products into the model products which other companies strive hard to emulate. We boost the leading research team and the top-ranking sale service.

## Microsoft GH-500 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Describe GitHub Advanced Security best practices, results, and how to take corrective measures: This section evaluates skills of Security Managers and Development Team Leads in effectively handling GHAS results and applying best practices. It includes using Common Vulnerabilities and Exposures (CVE) and Common Weakness Enumeration (CWE) identifiers to describe alerts and suggest remediation, decision-making processes for closing or dismissing alerts including documentation and data-based decisions, understanding default CodeQL query suites, how CodeQL analyzes compiled versus interpreted languages, the roles and responsibilities of development and security teams in workflows, adjusting severity thresholds for code scanning pull request status checks, prioritizing secret scanning remediation with filters, enforcing CodeQL and Dependency Review workflows via repository rulesets, and configuring code scanning, secret scanning, and dependency analysis to detect and remediate vulnerabilities earlier in the development lifecycle, such as during pull requests or by enabling push protection.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Configure and use Code Scanning with CodeQL:</b> This domain measures skills of Application Security Analysts and DevSecOps Engineers in code scanning using both CodeQL and third-party tools. It covers enabling code scanning, the role of code scanning in the development lifecycle, differences between enabling CodeQL versus third-party analysis, implementing CodeQL in GitHub Actions workflows versus other CI tools, uploading SARIF results, configuring workflow frequency and triggering events, editing workflow templates for active repositories, viewing CodeQL scan results, troubleshooting workflow failures and customizing configurations, analyzing data flows through code, interpreting code scanning alerts with linked documentation, deciding when to dismiss alerts, understanding CodeQL limitations related to compilation and language support, and defining SARIF categories.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Configure and use Dependabot and Dependency Review:</b> Focused on Software Engineers and Vulnerability Management Specialists, this section describes tools for managing vulnerabilities in dependencies. Candidates learn about the dependency graph and how it is generated, the concept and format of the Software Bill of Materials (SBOM), definitions of dependency vulnerabilities, Dependabot alerts and security updates, and Dependency Review functionality. It covers how alerts are generated based on the dependency graph and GitHub Advisory Database, differences between Dependabot and Dependency Review, enabling and configuring these tools in private repositories and organizations, default alert settings, required permissions, creating Dependabot configuration files and rules to auto-dismiss alerts, setting up Dependency Review workflows including license checks and severity thresholds, configuring notifications, identifying vulnerabilities from alerts and pull requests, enabling security updates, and taking remediation actions including testing and merging pull requests.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Configure and use secret scanning:</b> This domain targets DevOps Engineers and Security Analysts with the skills to configure and manage secret scanning. It includes understanding what secret scanning is and its push protection capability to prevent secret leaks. Candidates differentiate secret scanning availability in public versus private repositories, enable scanning in private repos, and learn how to respond appropriately to alerts. The domain covers alert generation criteria for secrets, user role-based alert visibility and notification, customizing default scanning behavior, assigning alert recipients beyond admins, excluding files from scans, and enabling custom secret scanning within repositories.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Describe the GHAS security features and functionality:</b> This section of the exam measures skills of Security Engineers and Software Developers and covers understanding the role of GitHub Advanced Security (GHAS) features within the overall security ecosystem. Candidates learn to differentiate security features available automatically for open source projects versus those unlocked when GHAS is paired with GitHub Enterprise Cloud (GHEC) or GitHub Enterprise Server (GHES). The domain includes knowledge of Security Overview dashboards, the distinctions between secret scanning and code scanning, and how secret scanning, code scanning, and Dependabot work together to secure the software development lifecycle. It also covers scenarios contrasting isolated security reviews with integrated security throughout the development lifecycle, how vulnerable dependencies are detected using manifests and vulnerability databases, appropriate responses to alerts, the risks of ignoring alerts, developer responsibilities for alerts, access management for viewing alerts, and the placement of Dependabot alerts in the development process.</li> </ul>

## GH-500 Latest Practice Materials & New GH-500 Exam Sample

You will stand at a higher starting point than others if you buy our GH-500 exam braindumps. Why are GH-500 practice questions worth your choice? I hope you can spend a little time reading the following content on the website, I will tell you some of the advantages of our GH-500 Study Materials. Firstly, our pass rate for GH-500 training guide is unmatched high as 98% to 100%. Secondly, we have been in this career for years and became a famous brand.

## Microsoft GitHub Advanced Security Sample Questions (Q25-Q30):

### NEW QUESTION # 25

As a repository owner, you do not want to run a GitHub Actions workflow when changes are made to any .txt or markdown files. How would you adjust the event trigger for a pull request that targets the main branch? (Each answer presents part of the solution.

Choose three.) on:

pull\_request:

branches: [main]

- A. - '/\* .txt'
- B. - 'docs/\*.md'
- C. paths-ignore:
- D. - '/\* .md'
- E. paths:

**Answer: A,C,D**

Explanation:

To exclude .txt and .md files from triggering workflows on pull requests to the main branch:

on: defines the event (e.g., pull\_request)

pull\_request: is the trigger

paths-ignore: is the key used to ignore file patterns

Example YAML:

yaml

CopyEdit

on:

pull\_request:

branches:

- main

paths-ignore:

- '\*.md'

- '\*.txt'

Using paths: would include only specific files instead - not exclude. paths-ignore: is correct here.

## NEW QUESTION # 26

Assuming that no custom Dependabot behavior is configured, who has the ability to merge a pull request created via Dependabot security updates?

- A. A user who has write access to the repository
- B. An enterprise administrator
- C. A repository member of an enterprise organization
- D. A user who has read access to the repository

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

By default, users with write access to a repository have the ability to merge pull requests, including those created by Dependabot for security updates. This access level allows contributors to manage and integrate changes, ensuring that vulnerabilities are addressed promptly.

Users with only read access cannot merge pull requests, and enterprise administrators do not automatically have merge rights unless they have write or higher permissions on the specific repository.

## NEW QUESTION # 27

When using the advanced CodeQL code scanning setup, what is the name of the workflow file?

- A. codeql-workflow.yml
- B. codeql-scan.yml
- C. codeql-analysis.yml
- D. codeql-config.yml

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation:

In the advanced setup for CodeQL code scanning, GitHub generates a workflow file named `codeql-analysis.yml`. This file is located in the `.github/workflows` directory of your repository. It defines the configuration for the CodeQL analysis, including the languages to analyze, the events that trigger the analysis, and the steps to perform during the workflow.

### NEW QUESTION # 28

What happens when you enable secret scanning on a private repository?

- A. Repository administrators can view Dependabot alerts.
- B. Dependency review, secret scanning, and code scanning are enabled.
- **C. GitHub performs a read-only analysis on the repository.**
- D. Your team is subscribed to security alerts.

**Answer: C**

Explanation:

When secret scanning is enabled on a private repository, GitHub performs a read-only analysis of the repository's contents. This includes the entire Git history and files to identify strings that match known secret patterns or custom-defined patterns.

GitHub does not alter the repository, and enabling secret scanning does not automatically enable code scanning or dependency review - each must be configured separately.

### NEW QUESTION # 29

Which of the following statements most accurately describes push protection for secret scanning custom patterns?

- A. Push protection must be enabled for all, or none, of a repository's custom patterns.
- B. Push protection is enabled by default for new custom patterns.
- C. Push protection is not available for custom patterns.
- **D. Push protection is an opt-in experience for each custom pattern.**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation:

Push protection for secret scanning custom patterns is an opt-in feature. This means that for each custom pattern defined in a repository, maintainers can choose to enable or disable push protection individually. This provides flexibility, allowing teams to enforce push protection on sensitive patterns while leaving it disabled for others.

### NEW QUESTION # 30

.....

The name of these formats are Microsoft GH-500 PDF dumps file, desktop practice test software, and web-based practice test software. All these three Microsoft Cloud GH-500 practice test formats are easy to use and perfectly work with all devices, operating systems, and web browsers. The GH-500 PdfDumps file is a simple collection of Real and Updated GitHub Advanced Security (GH-500) exam questions in PDF format and it is easy to install and use.
