

# Fantastic Valid Test PAP-001 Bootcamp Covers the Entire Syllabus of PAP-001

P.S. Free & New PAP-001 dumps are available on Google Drive shared by Actual4Labs: <https://drive.google.com/open?id=1qLdQ20ZZS99dyiuzTo1-x1cMRzvhdmY>

You may want to know our different versions of PAP-001 exam questions. Firstly, PDF version is easy to read and print. Secondly software version simulates the real PAP-001 actual test guide, but it can only run on Windows operating system. Thirdly, online version supports for any electronic equipment and also supports offline use. For the first time, you need to open PAP-001 Exam Questions in online environment, and then you can use it offline. All in all, helping our candidates to pass the exam successfully is what we always looking for. Our PAP-001 actual test guide is your best choice.

## Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.</li> </ul>

Topic 4	<ul style="list-style-type: none"> <li>• <b>General Configuration:</b> This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Integrations:</b> This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>• <b>Product Overview:</b> This section of the exam measures skills of Security Administrators and focuses on understanding PingAccess features, functionality, and its primary use cases. It also covers how PingAccess integrates with other Ping products to support secure access management solutions.</li> </ul>

## Reliable Ping Identity PAP-001 Test Dumps & PAP-001 Guide Torrent

We want to finish long term objectives through customer satisfaction and we have achieved it already by our excellent PAP-001 exam questions. In this era of cut throat competition, we are successful than other competitors. What is more, we offer customer services 24/7. Even if you fail the exams, the customer will be reimbursed for any loss or damage after buying our PAP-001 Guide dump. One decision will automatically lead to another decision, we believe our PAP-001 guide dump will make you fall in love with our products and become regular buyers.

## Ping Identity Certified Professional - PingAccess Sample Questions (Q36-Q41):

### NEW QUESTION # 36

A department has a requirement to protect anything in its application that resides in a folder named "escalated," no matter where that folder is in the path. Which path prefix should be used in this situation?

- A. escalated/
- **B. \*/escalated/**
- C. ./escalated/
- D. \*/escalated/+

**Answer: B**

Explanation:

PingAccess supports flexible path matching for resources using wildcards. If the requirement is to match any path that contains a folder named "escalated", the correct format is:

\* \*/escalated/# matches any location of the escalated directory within the path.

Exact Extract:

"The asterisk (\*) wildcard matches zero or more characters. Use it in resource paths to match folders at any depth."

\* Option A (escalated/) only matches when the resource starts with "escalated/" at the root, not at arbitrary depth.

\* Option B (\*/escalated/) is correct - it matches the escalated folder no matter where it occurs.

\* Option C (\*/escalated/+) is incorrect - + is not a valid PingAccess wildcard operator.

\* \*Option D (/escalated/) matches only when the path starts with "escalated" at the first level, not arbitrary positions.

Reference: PingAccess Administration Guide - Resource Path Matching

### NEW QUESTION # 37

Which two browsers are supported for the PingAccess Admin console? (Choose 2 answers.)

- A. Brave
- **B. Google Chrome**
- C. Opera

- D. Microsoft Edge
- E. Apple Safari

**Answer: B,D**

Explanation:

PingAccess officially supports Google Chrome and Microsoft Edge for the administrative console. Other browsers (Safari, Opera, Brave) may work but are not officially supported.

Exact Extract:

"The PingAccess administrative console is supported on current versions of Google Chrome and Microsoft Edge."

- \* Option A (Safari) is not officially supported.
- \* Option B (Opera) is not supported.
- \* Option C (Google Chrome) is correct.
- \* Option D (Microsoft Edge) is correct.
- \* Option E (Brave) is not officially supported.

Reference: PingAccess Release Notes - System Requirements

### NEW QUESTION # 38

An administrator is integrating a new PingAccess Proxied Application for which the target site uses a certificate issued by a publicly trusted Certificate Authority.

How should the administrator configure PingAccess to trust the target site?

- A. Drop the certificate chain into a Trusted Certificate Group
- B. Import the certificate chain into Key Pairs and add it to a Trusted Certificate Group
- C. Import the certificate chain into Key Pairs
- D. Configure the PingAccess Site to use the Java Trust Store Certificate Group

**Answer: D**

Explanation:

Publicly trusted Certificate Authorities are already included in the Java Trust Store Certificate Group, which PingAccess can use directly. This avoids importing the certificate manually.

Exact Extract:

"If the target site uses a certificate from a well-known public CA, configure the site to use the Java Trust Store Certificate Group."

- \* Option A is incorrect - Key Pairs store private keys for SSL termination, not public CA trust anchors.
- \* Option B is correct - Java Trust Store already contains trusted public CAs.
- \* Option C is incorrect - again, Key Pairs are not used for trust validation.
- \* Option D is unnecessary for public CAs - only internal/self-signed certs must be imported.

Reference: PingAccess Administration Guide - Trusted Certificate Groups

### NEW QUESTION # 39

During a business review of an application, the administrator needs to change the Resource Authentication to anonymous. What are the two effects of making this change to the resource? (Choose 2 answers.)

- A. The resource requires no further authentication, and all Access Control rules still apply.
- B. Requests to this resource are not logged, and Identity Mappings are applied.
- C. The resource requires no further authentication, and no rules will apply.
- D. The resource requires no further authentication, and Identity Mappings still apply.
- E. The resource requires no further authentication, and Processing rules still apply.

**Answer: D,E**

Explanation:

When a resource is configured as anonymous, PingAccess does not challenge the user for authentication.

However, certain processing and identity propagation still occur.

Exact Extract:

"Anonymous resources do not require authentication. Identity mappings and request/response processing rules still apply."

- \* Option A is incorrect because rules such as identity mappings and processing still apply.
- \* Option B is correct - Identity Mappings can still forward attributes, even for anonymous access.

- \* Option C is correct - Processing rules (e.g., request/response modifications) still apply.
  - \* Option D is incorrect - requests are logged; anonymous does not disable logging.
  - \* Option E is incorrect - access control rules (authorization) are not evaluated for anonymous resources.
- Reference: PingAccess Administration Guide - Resource Authentication

#### NEW QUESTION # 40

A change is made to the configuration that prevents user access to an application. No one claims to have made the change. Which log file should the administrator use to determine who made the change?

- A. pingaccess\_engine\_audit.log
- B. pingaccess.log
- C. pingaccess\_api\_audit.log
- D. pingaccess\_agent\_audit.log

**Answer: C**

Explanation:

All administrative API calls that change PingAccess configuration are logged in pingaccess\_api\_audit.log. This allows administrators to track who made configuration changes.

Exact Extract:

"The pingaccess\_api\_audit.log file contains entries for all administrative API calls and is used to audit configuration changes."

- \* Option A (pingaccess.log) contains runtime system messages but not detailed API audit entries.
- \* Option B (pingaccess\_engine\_audit.log) is specific to engine request/response audit logging.
- \* Option C (pingaccess\_agent\_audit.log) is used for PingAccess Agent traffic auditing, not administrative changes.
- \* Option D (pingaccess\_api\_audit.log) is correct - it tracks admin API modifications.
