300-720 Valid Test Labs - Valid 300-720 Braindumps

We will refund your money if you fail to pass the exam after buying 300-720 study materials. If you choose us, we will ensure you pass the exam. And we are pass guaranteed and money back guaranteed. Besides, 300-720 study materials of us will help you pass the exam just one time. With professional experts to compile the 300-720 Exam Dumps, they are high-quality. And we also have online and offline chat service staff, who possess the professional knowledge about the 300-720 study materials, and if you have any questions, just contact us, we will give you reply as quickly as possible.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q128-Q133):

NEW QUESTION # 128

An engineer must provide differentiated email filtering to executives within the organization Which two actions must be taken to accomplish this task? (Choose two)

- **A. Create content filters for actions to take on messages that contain specific data**
- B. Defining the default mail policies for incoming or outgoing messages is not sufficient, as default mail policies apply to all users and do not allow for differentiation based on user groups[4, p. 2].
- C. Define the default mail policies for incoming or outgoing messages
- D. Upload a csv file containing the email addresses for the users for whom you want to create mail policies.
- E. Enable the content-scanning features you want to use with mail policies

- F. Define an LDAP group query to specify users to whom the mail policy rules apply.

Answer: A,F

Explanation:

Define an LDAP group query to specify users to whom the mail policy rules apply. This way, you can create a custom group of executive users and apply different mail policies to them based on their LDAP attributes[4, p. 2].

Create content filters for actions to take on messages that contain specific data. Content filters allow you to scan the message body and attachments for keywords, phrases, or patterns that match your criteria and perform actions such as quarantine, encrypt, or drop the message[4, p. 7].

The other options are not valid because:

C) Uploading a csv file containing the email addresses for the users for whom you want to create mail policies is not a supported feature of Cisco Secure Email.

D) Enabling the content-scanning features you want to use with mail policies is not necessary, as content scanning is enabled by default for all incoming and outgoing messages[4, p. 6].

NEW QUESTION # 129

An engineer must configure incoming message verification using DMARC in Cisco Secure Email Gateway.

Emails from VP@cisco.com must skip the verification Drag and drop the actions from the left into the sequence on the right to meet the requirement.

Answer:

Explanation:

Explanation:

Create a DMARC verification profile.

Edit the global DMARC settings to bypass DMARC for VP@cisco.com

Enable DMARC Verification for the mail flow policy (select the profile).

Configure a return address for DMARC feedback reports.

NEW QUESTION # 130

What is the default method of remotely accessing a newly deployed Cisco Secure Email Virtual Gateway when a DHCP server is not available?

- A. DHCP is required for the initial IP address assignment
- B. Manual configuration of an IP address is required through the serial port before remote access
- **C. Use the IP address of 192.168.42.42 via the Management port**
- D. Manual configuration of an IP address is required through the hypervisor console before remote access

Answer: C

Explanation:

The default method of remotely accessing a newly deployed Cisco Secure Email Virtual Gateway when a DHCP server is not available is to use the IP address of 192.168.42.42 via the Management port. This IP address is assigned by default to the Management port of the virtual gateway and can be used to access the web user interface or the command-line interface of the appliance. NEW QUESTION # 131

What are two primary components of content filters? (Choose two.)

- A. policies
- B. subject
- **C. actions**
- D. content
- **E. conditions**

Answer: C,E

NEW QUESTION # 132

Which feature must be activated on a Cisco Secure Email Gateway to combat backscatter?

- **A. Bounce Verification**
- B. Bounce Profile
- C. Forged Email Detection
- D. Graymail Detection

Answer: A

Explanation:

To combat backscatter, which is a type of spam that consists of bounce messages sent to forged sender addresses, the administrator must enable the Bounce Verification feature under Security Settings. This feature allows the appliance to verify whether a bounce message is legitimate or not by checking if the original message was sent from the appliance. If not, the bounce message is considered as backscatter and can be dropped or quarantined. Reference: [Cisco Secure Email Gateway Administrator Guide - Configuring Bounce Verification]

NEW QUESTION # 133

.....

Our 300-720 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening in the world.
