Microsoft Dynamics 365 Supply Chain Management Functional Consultant Sample Questions (Q115-Q120):

NEW QUESTION # 115

A company implements Dynamics 365 for Finance and Operations.

They need additional information and want a subledger to record information for additional reporting rather than customizing all reports.

You need to set up the posting to accommodate the need for a subledger.

Which three actions should you take? Each answer presents part of the solution.

- **A. Create posting profiles to post to the identified area as needed for the request**
- **B. Identify an area of the chart of accounts to record to as the subledger**
- C. Create posting definitions to post to the identified area as needed for the request
- D. Update existing reports to prevent data in the identified area from reporting
- **E. Update existing reports to add data in the identified area**

Answer: A,B,E

Explanation:

Section: Configure security, processes, and options

NEW QUESTION # 116

A company uses several freight carriers. Freight is calculated by mileage.

You need to configure the system.

Which values should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 117

A distribution company implementing Dynamics 365 Supply Chain Management has two warehouses.

One item is purchased and stocked in only Warehouse1. Occasionally, Warehouse2 requires this item based on customer demand.

When this occurs, an order for the item must be automatically created for Warehouse2.

You need to configure the automation of the order for Warehouse2.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation:

Box 1: Warehouse1

Set up warehouses for transfer orders.

You can use warehouse levels to create a hierarchy that supports transfer orders between warehouses. Based on this setup, master scheduling calculates item requirements at the individual warehouse level and generates planned transfer orders from an assigned source warehouse to fulfill them.

* Click Inventory management > Setup > Inventory breakdown > Warehouses.

* Select the warehouse that you want to refill.

* On the Master planning FastTab, select the Refilling check box.

* In the Main warehouse field, select the warehouse that you want to assign as the refilling warehouse.

Master scheduling calculates a transfer requirement for the selected warehouse and generates a planned transfer order from the assigned Main warehouse.

Note: If you clear the Refilling check box, the selected warehouse is assigned a warehouse level in regard to the Main warehouse, but the Main warehouse is not set up as a refilling warehouse.

* Close the page to apply the new setup.

Box 2: Transfer

NEW QUESTION # 118

Hotspot Question

A donut company is implementing Dynamics 365 Supply Chain Management.

The company wants to set up and maintain formula items for donut production. If the formula quantity changes, all ingredients must automatically adjust with no manual edits.

You must configure the formula features.

Which features should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□ Explanation:

Box 1: Variable

Box 2: Scalable

Use the Scalable feature

The Scalable feature is available only if all the item components in the formula are set to Variable consumption. The feature isn't available if item components are set to Fixed consumption or Step consumption. When the Scalable feature is used, if you change an ingredient in a formula, the quantity of the other ingredients that you select is adjusted. The size of the formula is also adjusted. Likewise, if you change the formula size, the quantity of all scalable ingredients is changed. This feature is intended specifically for formula creation and maintenance. It doesn't indicate whether the quantity of an ingredient will be scaled up or down on a batch order.

NEW QUESTION # 119

A company uses Dynamics 365 Supply Chain Management to sell automobile tires.

The company sells different models of tires. Each model is available in different diameter sizes. The combination of a model and its diameter represents an individual stock keeping unit (SKU).

The manufacturer's suggested retail price (MSRP) and purchase prices can vary between variants. The purchase price for the variants will change over time, but the MSRP will never change once it is configured.

All price changes must be documented systematically. The MSRP must be the default selling price for the item if no other pricing is available.
