Updated CSP-Assessor CBT, CSP-Assessor Interactive Practice Exam

The industry experts hired by CSP-Assessor exam materials are those who have been engaged in the research of CSP-Assessor exam for many years. They have a keen sense of smell in the direction of the exam. Therefore, they can make accurate predictions on the exam questions. Therefore, our study materials specifically introduce a mock examination function. With CSP-Assessor exam materials, you can not only feel the real exam environment, but also experience the difficulty of the exam. You can test your true level through simulated exams. At the same time, after repeated practice of CSP-Assessor study braindumps, I believe that you will feel familiar with these questions during the exam and you will feel that taking the exam is as easy as doing exercises in peace. According to our statistics on the data so far, the passing rate of the students who have purchased one exam exceeds 99%, which is enough to see that CSP-Assessor test guide is a high-quality product that can help you to realize your dream.

Swift CSP-Assessor Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Understanding the methodology and assessment deliverables: This section is designed for independent auditors working with Swift systems. It tests the candidate's grasp of the Assessor's role and obligations when conducting a CSP assessment. The section evaluates knowledge of key elements to consider during the assessment process.

Topic 2	<ul style="list-style-type: none"> Understanding the Swift Customer Security Programme: This domain is targeted at compliance officers and risk managers involved in Swift operations. It evaluates the candidate's comprehension of the CSP controls framework and their ability to determine the appropriate architecture type and related scope as outlined in the Customer Security Controls Framework (CSCF).
Topic 3	<ul style="list-style-type: none"> Understanding Swift: This section of the exam measures the skills of Swift network administrators and covers Swift's crucial role in the international financial community, including the structure and operations of the Swift network and its infrastructure.

Swift Customer Security Programme Assessor Certification Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which statement(s) is/are correct about the LSO/RSO accounts on a Swift Alliance Access? (Choose all that apply.)

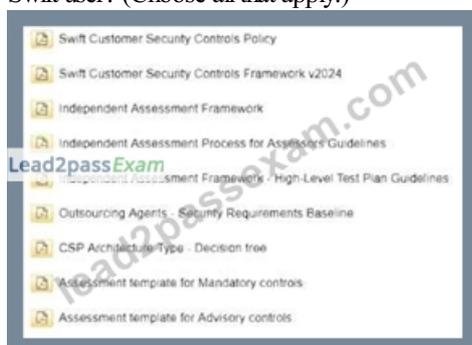

- A. They are responsible for the configuration and management of the security functions of the server
- B. Their PKI certificates are stored either on a HSM Token or on a HSM-box
- C. They are local Security Officers
- D. They are the business profiles that can sign the Swift financial transactions

Answer: A,B,C

NEW QUESTION # 37

A Swift user uses an application integrating a sFTP client to push files to a service bureau sFTP server. What architecture type is the Swift user? (Choose all that apply.)

- A. A1
- B. A3
- C. A4
- D. B

Answer: B,D

NEW QUESTION # 38

Which statements are correct about the Alliance Access LSO and RSO? (Select the two correct answers that apply)

*Connectivity

*Generic

*Products Cloud

*Products OnPrem

*Security

- A. They are Alliance Security Officers
- B. They are the business profiles that can sign the SWIFT financial transactions
- C. Their PKI certificates are stored either on an HSM Token or on an HSM-box
- D. They are responsible for the configuration and management of the security functions in the messaging interface

Answer: A,D

Explanation:

The Local Security Officer (LSO) and Remote Security Officer (RSO) are roles defined within the SWIFT Alliance suite, particularly for managing security in messaging interfaces like Alliance Access. Let's evaluate each option:

*Option A: They are Alliance Security Officers

This is correct. The LSO and RSO are collectively referred to as Alliance Security Officers within the SWIFT ecosystem. The LSO is typically an on-site officer responsible for local security management, while the RSO can perform similar functions remotely, often for distributed environments. These roles are critical for configuring and maintaining security settings in Alliance Access, as outlined in SWIFT's operational documentation. The CSCF Control "6.1 Security Awareness" emphasizes the importance of trained security officers, which aligns with the LSO/RSO roles.

*Option B: Their PKI certificates are stored either on an HSM Token or on an HSM-box This is incorrect. While PKI certificates are used for authentication and are managed within the SWIFT environment, they are not specifically tied to the LSO or RSO roles in terms of storage. PKI certificates for SWIFTNet are stored and managed by the Hardware Security Module (HSM), either as an HSM token (e.g., a smart card) or an HSM-box (e.g., a physical or virtual HSM device). However, these certificates are associated with the SWIFT application or user roles (e.g., for message signing), not the LSO/RSO profiles themselves. The LSO/RSO uses these certificates as part of their duties, but the statement implies ownership or storage, which is inaccurate. CSCF Control "1.3 Cryptographic Failover" specifies HSM management, not LSO/RSO certificate storage.

*Option C: They are the business profiles that can sign the SWIFT financial transactions This is incorrect. The LSO and RSO are security management roles, not business profiles authorized to sign financial transactions. Signing SWIFT financial transactions (e.g., MT103 messages) is the responsibility of authorized business users or automated processes within Alliance Access, who use PKI certificates managed by the HSM. The LSO/RSO's role is to configure and oversee security, not to perform transactional activities. This distinction is clear in SWIFT's role-based access control documentation.

*Option D: They are responsible for the configuration and management of the security functions in the messaging interface This is correct. The LSO and RSO are tasked with configuring and managing security functions within Alliance Access, such as user access control, authentication settings, and compliance with CSCF requirements. This includes managing PKI certificate usage, setting up secure communication channels, and ensuring the messaging interface adheres to security policies. For example, the LSO can define security profiles and monitor access, as detailed in the Alliance Access Administration Guide, aligning with CSCF Control "2.1 Internal Data Transmission Security."

Summary of Correct Answers:

The LSO and RSO are Alliance Security Officers (A) and are responsible for the configuration and management of security functions in the messaging interface (D). Their PKI certificates are not stored by them, and they do not sign transactions.

References to SWIFT Customer Security Programme Documents:

*SWIFT Customer Security Controls Framework (CSCF) v2024: Control 6.1 highlights the role of security officers like LSO/RSO.

*SWIFT Alliance Access Documentation: Describes LSO/RSO responsibilities for security configuration.

*SWIFT Security Guidelines: Details PKI certificate management by HSM, not LSO/RSO.

NEW QUESTION # 39

What are the conditions required to permit reliance on the compliance conclusion of a control assessed in the previous year? (Choose all that apply.)

- Swift Customer Security Controls Policy
- Swift Customer Security Controls Framework v2024
- Independent Assessment Framework
- Independent Assessment Process for Assessors Guidelines
- Independent Assessment Framework - High-Level Test Plan Guidelines
- Outsourcing Agents - Security Requirements Baseline
- CSP Architecture Type - Decision tree
- Assessment template for Mandatory controls
- Assessment template for Advisory controls

- A. The control definition has not changed
- B. The control-design and implementation are the same
- C. The control compliance conclusion must have already been relied on the past two years
- D. The previous assessment was performed on the (correct) CSCF version of the previous year

Answer: A,B,D

NEW QUESTION # 40

What must a Swift user implement to comply with a CSCF security control?

- Swift Customer Security Controls Policy
- Swift Customer Security Controls Framework v2024
- Independent Assessment Framework
- Independent Assessment Process for Assessors Guidelines
- Independent Assessment Framework - High-Level Test Plan Guidelines
- Outsourcing Agents - Security Requirements Baseline
- CSP Architecture Type - Decision tree
- Assessment template for Mandatory controls
- Assessment template for Advisory controls

- A. A solution that meets the control objectives and addresses the risk drivers for the in scope components)
- B. A solution that maps the implementation guidelines described for a controls in scope components

Answer: A

NEW QUESTION # 41

.....

The CSP-Assessor test material, in order to enhance the scientific nature of the learning platform, specifically hired a large number of qualification exam experts, composed of product high IQ team, these experts by combining his many years teaching experience of CSP-Assessor quiz guide and research achievements in the field of the test, to exam the popularization was very complicated content of Swift Customer Security Programme Assessor Certification exam dumps. Expert team can provide the high quality for the CSP-Assessor Quiz guide consulting for you to pass the CSP-Assessor exam.
