ACD201 Exam Price | Valid ACD201 Exam Cost

ActualTestsIT Appian Senior Developer (ACD201) practice material can be accessed instantly after purchase, so you won't have to face any excessive issues for preparation of your desired ACD201 certification exam. The ACD201 Exam Dumps of ActualTestsIT has been made after seeking advice from many professionals. Our objective is to provide you with the best learning material to clear

the Appian Senior Developer (ACD201) exam.

Appian Senior Developer Sample Questions (Q12-Q17):

NEW QUESTION # 12
You're inspecting the items in a deployment package for issues you might have missed during package preparation.
Which two objects can be in your list of missing precedents for an application? (Choose two.)

- A. Connected System
- B. Group Type Custom
- C. System Knowledge Center
- D. Document

Answer: A,B

Explanation:
Connected System and Group Type Custom can both be missing precedents in an Appian deployment package, meaning dependent objects required by the application may not have been included.

NEW QUESTION # 13
The synced record Task has a self-referential relationship defined in the column parentTaskId. There is a many-to- one record relationship between the id and parentTaskId called parentTask.
For a given task ID, you need to return the task name and the parent task name.
What should you do?

- A. Use a!queryRecordType() With a filter on the task id, with fields specified to return recordType!Task.
  name and recordType!Task.parentTask.name.
- B. Create a sync-time custom record field on the Task record called parentName. Specify this field to return in the query field selection.
- C. Use a!queryRecordType() filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.

Answer: A

Explanation:
A single a!queryRecordType() call filtered by the task's id and selecting both recordType!Task.name and recordType!Task.parentTask.name leverages the existing self-referential relationship, returning the task name and its parent's name in one efficient query without additional custom fields or extra queries.

NEW QUESTION # 14
You're designing a report to show the total number of cases per month grouped by region. A synced record exists for the data source.
Which design pattern is most appropriate in this case?

- A. Configure a!columnChartFieid() using a!columnChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- B. Configure a!pieChartFieid() using a!pieChartConfig() with the case creation date as the primaryGrouping and the region as the secondaryGrouping.
- C. Use a!queryRecordType() with a!aggregationFieids() to group the case creation date by region into a local variable. Pass the local variable value into the data input of a!columnChartField()

Answer: C

Explanation:
Using a!queryRecordType() with a!aggregationFields() to group by case creation date and region, storing the result in a local variable and passing it to the data input of a!columnChartField() ensures efficient aggregation and flexible chart display for your report.

NEW QUESTION # 15

You're creating a new record type with data sync enabled. Users in the "ACME Employees" group must be able to access the record list and start the New Case action.

What are two valid steps that you should perform to grant users the appropriate access? (Choose two.)

- A. Grant Initiator permissions to the underlying process model for the New Case action.
- B. Add the "ACME Employees" group as a Viewer to the data store mapped to the record.
- C. Add the "ACME Employees" group as a Viewer on the record type.
- D. Grant Viewer permissions to the underlying interface object for the record list.

Answer: A,C

Explanation:
Adding the "ACME Employees" group as a Viewer on the record type allows them to access the record list.
Granting Initiator permissions to the process model for the New Case action enables group members to start that action.

NEW QUESTION # 16

You need to assign a user input task to three different groups of users: Group A, Group B, and Group C.
Each task form shares some common components with the following key differences:
Group B will receive a task that includes an additional section.
Group C will only view and enter data for one section.
What should you do?

- A. Configure the version setting on the user input task node to conditionally display the correct form.
- B. Within the process model, utilize an XOR gateway to conditionally select between the three different user input tasks.
- C. Utilize conditional logic on the form along with the showWhen parameter for interface components.

Answer: C

Explanation:
Using conditional logic with the showWhen parameter on the form allows you to display or hide specific sections for each group within a single user input task, making the solution flexible and maintainable.

NEW QUESTION # 17

......

We can calculate that ACD201 certification exam is the best way by which you can learn new applications, and tools and mark your name in the list of best employees in your company. You don't have to be dependent on anyone to support you in your professional life, but you have to prepare for ActualTestsIT real Appian Senior Developer (ACD201) exam questions.
