What is the advantage of using the NFS protocol versus the iSCSI or FCoE SAN protocols?

- A. NFS is more sensitive to latency.
- B. NFS requires an AAA server.
- C. NFS natively provides encryption as the default.
- D. NFS provides easy file sharing.

Answer: D

Explanation:

NFS (Network File System) is a file-level protocol that allows for easy file sharing between clients over a network. It is well-suited for environments where multiple clients need to read and write to the same set of files, such as collaborative projects or distributed workloads. This ease of file sharing is an advantage over block-level storage protocols like iSCSI and FCoE, which provide access to raw storage blocks rather than a shared file system.
