These TestKingFree PTCE exam questions are designed and checked by the Medical Tests subject matter experts. They check each TestKingFree PTCE Exam Practice question thoroughly and ensure the top standard of TestKingFree PTCE exam questions all the time.

Who is a pharmacy technician? Sometimes known as a pharmaceutical technician, pharmacy technician is a health care provider who performs pharmacy-related functions, generally working under the direct supervision of a licensed pharmacist. Job duties include dispensing prescription drugs and other medical devices to patients and instructing on their use. They may also perform administrative duties in pharmaceutical practice, such as reviewing prescription requests with doctor's offices and insurance companies to ensure correct medications are provided and payment is received.

Although this may not sound like the hardest job in the world, being a pharmacy technician isn't easy, as the work these people do directly affects the health of others. Therefore, it is vitally important that people hired as pharmacy technicians are qualified for this job. This is why more and more pharmacies and pharmacy chains expect their employees to have a valid PTCE credential.

PTCE Preparation & New PTCE Exam Test

The clients can download our products and use our PTCE study materials immediately after they pay successfully. Our system will send our PTCE learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our PTCE Guide materials. As long as the clients buy our PTCE training quiz they can immediately use our product and save their time.

Medical Tests Pharmacy Technician Certification Exam Sample Questions (Q203-Q208):

NEW QUESTION # 203

Handling hazardous substances should be done:

- A. In a positive-pressure clean room
- B. Using disposable gloves washed between each use.
- C. Wearing personal protective equipment.
- D. In a chemical safety cabinet.

Answer: C

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

Hazardous drugs (HDs) must be handled with personal protective equipment (PPE), including:

- * Gloves (chemotherapy-rated)
- * Gown (disposable, impermeable material)
- * Eye protection (if splashing risk exists)
- * Respirator (if airborne exposure is possible)

#Explanation of Answer Choices#B. Wearing personal protective equipment#Correct. USP <800> mandates PPE for handling hazardous drugs.#A. In a chemical safety cabinet# Incorrect. Only sterile hazardous drugs require a biological safety cabinet.#C.

Using disposable gloves washed between each use# Incorrect.

Disposable gloves should be discarded, not washed.#D. In a positive-pressure clean room# Incorrect.

Hazardous drugs require negative pressure rooms, not positive pressure.

- * USP <800>: Hazardous Drug Handling
- * NIOSH Guidelines on PPE for Hazardous Drugs

NEW QUESTION # 204

CORRECT TEXT

The doctor writes: ii gtts OU bid. What does this mean?

Answer:

Explanation:

Two drops in each eye twice a day.

NEW QUESTION # 205

Which of the following over-the-counter pain medications would be most appropriate for a patient with gastroesophageal reflux disease?

- A. Aspirin
- B. Acetaminophen
- C. Ibuprofen
- D. Naproxen

Answer: B

Explanation:

NSAIDs (e.g., ibuprofen, naproxen, aspirin) can irritate the gastric mucosa, increase gastric acidity, and worsen GERD symptoms or cause GI adverse effects such as dyspepsia and ulceration. Acetaminophen does not have NSAID gastric effects and is the preferred OTC analgesic/antipyretic for patients with GERD or those at risk for GI complications, when appropriate and within dosing limits.

References:* PTCB/ExCPT Study Guides: Nonprescription analgesics and GI precautions.* AHFS/Drug Facts & Comparisons: NSAID GI risk; acetaminophen GI tolerability.* ACG/clinical practice references commonly cited in technician materials regarding GERD and analgesic selection.

NEW QUESTION # 206

A prescription for 1 pint of rifampin 1% suspension. 2 tbsp daily, will be compounded using how many 300 mg capsules of the drug?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

1 pint = 473 mL (since 1 pint = 16 fluid ounces, and 1 fluid ounce = 29.5735 mL). A 1% suspension means 1 g (1000 mg) of rifampin per 100 mL of suspension.

* Total dose required: 2 tbsp daily = 30 mL per day (1 tbsp = 15 mL).

* Total volume of the suspension: 473 mL

* Total rifampin required: $(473 \text{ mL} \times 1000 \text{ mg}) \div 100 \text{ mL} = 4730 \text{ mg}$

Each rifampin capsule contains 300 mg. So, $4730 \text{ mg} \div 300 \text{ mg/capsule} = 15.77$ capsules, which rounds up to 16 capsules.

Thus, the correct answer is C. 32 capsules (since the full pint must be compounded).

#Reference: Pharmacy compounding principles; PTCE study materials on dosage calculations.

NEW QUESTION # 207

SIMULATION

The term prophylaxis means _____.

Answer:

Explanation:

Preventative treatment

NEW QUESTION # 208
