# Free PDF 2026 DP-203: Trustable Valid Data Engineering on Microsoft Azure Exam Cost
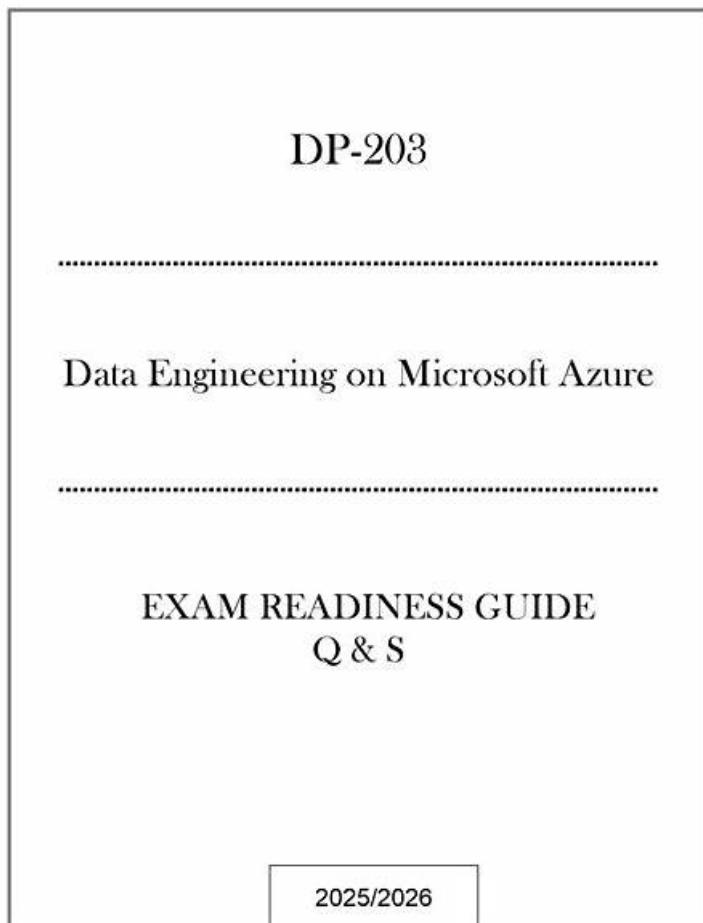

2026 Latest ExamPrepAway DP-203 PDF Dumps and DP-203 Exam Engine Free Share: https://drive.google.com/open?id=1YGuOH4A_T18oYn15EgvKekx1SLDVUPn4

Our DP-203 study materials are constantly improving themselves. We keep updating them to be the latest and accurate. And we apply the latest technologies to let them applied to the electronic devices. If you have any good ideas, our DP-203 Exam Questions are very happy to accept them. DP-203 learning braindumps are looking forward to having more partners to join this family. We will progress together and become better ourselves.

One of the main unique qualities of ExamPrepAway Data Engineering on Microsoft Azure Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Data Engineering on Microsoft Azure (DP-203) PDF dumps and Web-based software without installation. Microsoft DP-203 PDF Questions work on all the devices like smartphones, Macs, tablets, Windows, etc. We know that it is hard to stay and study for the Data Engineering on Microsoft Azure (DP-203) exam dumps in one place for a long time.

Microsoft DP-203 Study Guide - Lab DP-203 Questions

The trouble can test a person's character. A bad situation can show special integrity. When to face of a difficult time, only the bravest people could take it easy. Are you a brave person? If you did not do the best preparation for your IT certification exam, can you take it easy? Yes, of course. Because you have ExamPrepAway's Microsoft DP-203 Exam Training materials. As long as you have it, any examination do not will knock you down.

Microsoft Data Engineering on Microsoft Azure Sample Questions (Q185-Q190):

NEW QUESTION # 185
You have a data model that you plan to implement in a data warehouse in Azure Synapse Analytics as shown in the following exhibit.
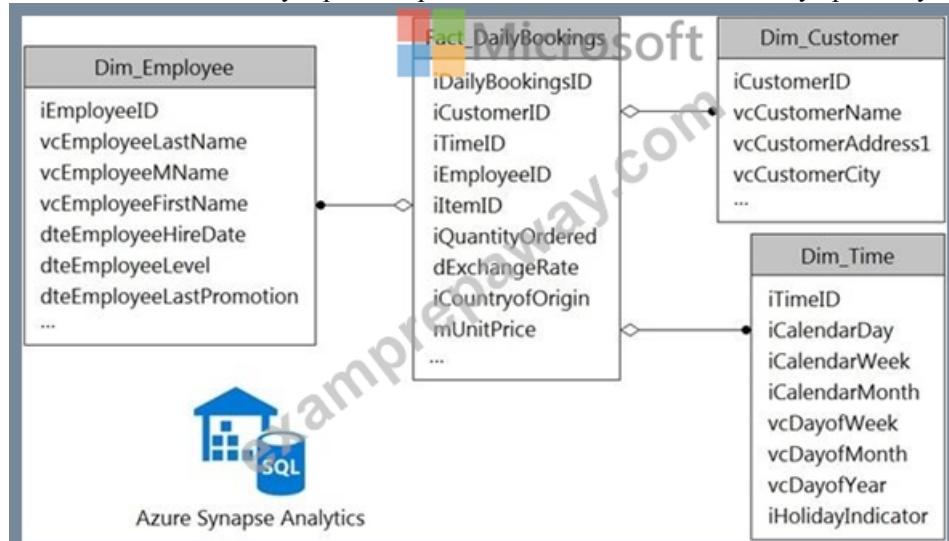

All the dimension tables will be less than 2 GB after compression, and the fact table will be approximately 6 TB.
Which type of table should you use for each table? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Dim_Customer:
- Hash distributed
- Round-robin
- Replicated

Dim_Employee:
- Hash distributed
- Round-robin
- Replicated

Dim_Time:
- Hash distributed
- Round-robin
- Replicated

Fact_DailyBookings:
- Hash distributed
- Round-robin
- Replicated

Answer:

Explanation:

Answer Area

Dim_Customer:
- Hash distributed
- Round-robin
- **Replicated**

Microsoft

Dim_Employee:
- Hash distributed
- Round-robin
- **Replicated**

Dim_Time:
- Hash distributed
- Round-robin
- **Replicated**

Fact_DailyBookings:
- **Hash distributed**
- Round-robin
- Replicated
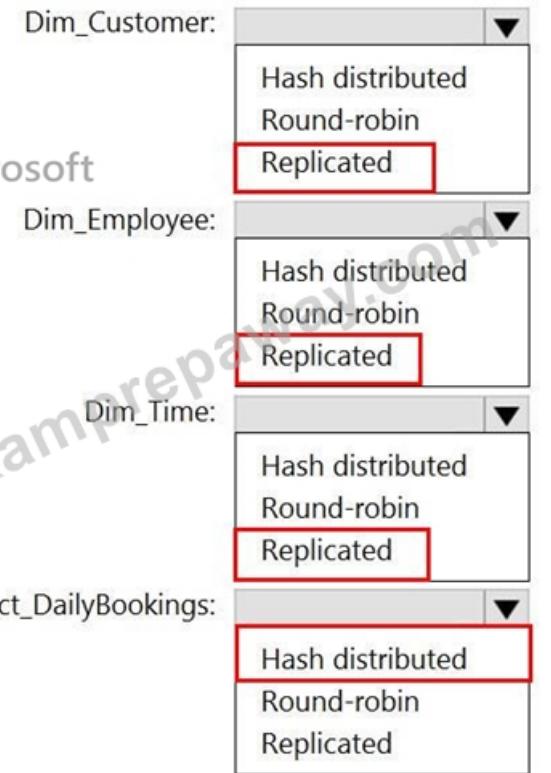

NEW QUESTION # 186
You have an Azure data solution that contains an enterprise data warehouse in Azure Synapse Analytics named DW1.
Several users execute ad hoc queries to DW1 concurrently.
You regularly perform automated data loads to DW1.
You need to ensure that the automated data loads have enough memory available to complete quickly and successfully when the adhoc queries run.
What should you do?

- A. Assign a larger resource class to the automated data load queries.
- B. Create sampled statistics for every column in each table of DW1.
- C. Hash distribute the large fact tables in DW1 before performing the automated data loads.
- D. Assign a smaller resource class to the automated data load queries.

Answer: A

NEW QUESTION # 187
You have an Azure Synapse Analytics dedicated SQL pool that contains the users shown in the following table.

Name	Role
User1	Server admin
User2	db_datereader

User1 executes a query on the database, and the query returns the results shown in the following exhibit.

```
1   SELECT c.name,
2       tbl.name as table_name,
3       typ.name as datatype,
4       c.is_masked,
5       c.masking_function
6   FROM sys.masked_columns AS c
7   INNER JOIN sys.tables AS tbl ON c.[object_id] = tbl.[object_id]
8   INNER JOIN sys.types typ ON c.user_type_id = typ.user_type_id
9   WHERE is_masked = 1;
10
```

Results   Messages

	name	table_name	datatype	is_masked	masking_function
1	BirthDate	DimCustomer	date	1	default()
2	Gender	DimCustomer	nvarchar	1	default()
3	EmailAddress	DimCustomer	nvarchar	1	email()
4	YearlyIncome	DimCustomer	money	1	default()

User1 is the only user who has access to the unmasked data.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

When User2 queries the YearlyIncome column, the values returned will be **[answer choice]**.

▼
a random number
the values stored in the database
XXXX
0

When User1 queries the BirthDate column, the values returned will be **[answer choice]**.

▼
a random date
the values stored in the database
XXXX
1900-01-01

Answer:

Explanation:

When User2 queries the YearlyIncome column, the values returned will be [answer choice].

- a random number
- the values stored in the database
- XXXX
- 0

When User1 queries the BirthDate column, the values returned will be [answer choice].

- a random date
- the values stored in the database
- XXXX
- 1900-01-01

Explanation

Graphical user interface, text, application, email Description automatically generated

When User2 queries the YearlyIncome column, the values returned will be [answer choice].

- a random number
- the values stored in the database
- XXXX
- 0

When User1 queries the BirthDate column, the values returned will be [answer choice].

- a random date
- the values stored in the database
- XXXX
- 1900-01-01

Box 1: 0

The YearlyIncome column is of the money data type.

The Default masking function: Full masking according to the data types of the designated fields Use a zero value for numeric data types (bigint, bit, decimal, int, money, numeric, smallint, smallmoney, tinyint, float, real).

Box 2: the values stored in the database

Users with administrator privileges are always excluded from masking, and see the original data without any mask.

Reference:

https://docs.microsoft.com/en-us/azure/azure-sql/database/dynamic-data-masking-overview

NEW QUESTION # 188

You have data stored in thousands of CSV files in Azure Data Lake Storage Gen2. Each file has a header row followed by a properly formatted carriage return (/r) and line feed (/n).

You are implementing a pattern that batch loads the files daily into an enterprise data warehouse in Azure Synapse Analytics by using PolyBase.

You need to skip the header row when you import the files into the data warehouse. Before building the loading pattern, you need to prepare the required database objects in Azure Synapse Analytics.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: Each correct selection is worth one point

Actions

Create a database scoped credential that uses Azure Active Directory Application and a Service Principal Key

Create an external data source that uses the abfs location

Use `CREATE EXTERNAL TABLE AS SELECT (CETAS)` and configure the reject options to specify reject values or percentages

Create an external file format and set the `First_Row` option

Answer Area

Answer:

Explanation:

Actions

Create a database scoped credential that uses Azure Active Directory Application and a Service Principal Key

Create an external data source that uses the abfs location

Use `CREATE EXTERNAL TABLE AS SELECT (CETAS)` and configure the reject options to specify reject values or percentages

Create an external file format and set the `First_Row` option

Answer Area

Create an external data source that uses the abfs location

Create an external file format and set the `First_Row` option

Use `CREATE EXTERNAL TABLE AS SELECT (CETAS)` and configure the reject options to specify reject values or percentages

Explanation
A picture containing timeline Description automatically generated

Create an external data source that uses the abfs location

Create an external file format and set the `First_Row` option

Use `CREATE EXTERNAL TABLE AS SELECT (CETAS)` and configure the reject options to specify reject values or percentages

Step 1: Create an external data source that uses the abfs location

Create External Data Source to reference Azure Data Lake Store Gen 1 or 2 Step 2: Create an external file format and set the First_Row option.

Create External File Format.

Step 3: Use CREATE EXTERNAL TABLE AS SELECT (CETAS) and configure the reject options to specify reject values or percentages To use PolyBase, you must create external tables to reference your external data.

Use reject options.

Note: REJECT options don't apply at the time this CREATE EXTERNAL TABLE AS SELECT statement is run. Instead, they're specified here so that the database can use them at a later time when it imports data from the external table. Later, when the CREATE TABLE AS SELECT statement selects data from the external table, the database will use the reject options to determine the number or percentage of rows that can fail to import before it stops the import.

https://docs.microsoft.com/en-us/sql/relational-databases/polybase/polybase-t-sql-objects

https://docs.microsoft.com/en-us/sql/t-sql/statements/create-external-table-as-select-transact-sql

NEW QUESTION # 189

You have an Azure Data Lake Storage Gen2 account that contains a JSON file for customers. The file contains two attributes named FirstName and LastName.

You need to copy the data from the JSON file to an Azure Synapse Analytics table by using Azure Databricks. A new column must be created that concatenates the FirstName and LastName values.

You create the following components:

A destination table in Azure Synapse

An Azure Blob storage container

A service principal

Which five actions should you perform in sequence next in is Databricks notebook? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:
1) mount onto DBFS
2) read into data frame
3) transform data frame
4) specify temporary folder
5) write the results to table in in Azure Synapse
