Passing the CMT-Level-I Exam is an important step for individuals who are looking to establish themselves as experts in the field of technical analysis and advance their careers in the financial industry.

CMT Association CMT Level 1 Exam Sample Questions (Q110-Q115):

NEW QUESTION # 110

A company whose stock is in a well-established uptrend, reports earnings slightly above consensus estimates. After an initial rally, the stock then ends lower on the day. This would probably be an example of:

- A. A short-coming of fundamental analysis
- B. Unrealistic expectations
- C. Investor under-reaction
- D. Market discounting

Answer: D

Explanation:

Detailed Explanation:

The market looks forward. If a stock is in an uptrend, the market has likely already anticipated (discounted) the good news. When the news is finally released, those who bought the rumor sell the fact. The price drop despite "good news" is a classic example of market discounting-the news was already priced in.

NEW QUESTION # 111

Which of the following is a characteristic of the MACD indicator?

- A. When the slower MACD line is above the faster line, the MACD histogram will be above zero
- B. MACD crossover rules are different than other crossover rules
- C. It oscillates between 0 and 100
- D. MACD is useful in trending markets as it is unbounded

Answer: D

Explanation:

Detailed Explanation:

Unlike RSI or Stochastics (which are bounded 0-100), the MACD (Moving Average Convergence Divergence) is the difference between two moving averages. This difference can technically grow indefinitely if prices move exponentially. Thus, it is unbounded³¹.

NEW QUESTION # 112

Which of the following is a valid approach in using technical analysis to make investment decisions among stock market sectors?

- A. Sector rotation is random
- B. Sectors whose relative strength lines are just turning up after a downtrend should be sold
- C. Charting tools such as trendlines and moving averages should not be employed with relative strength lines
- **D. Relative strength analysis allows for identification of the strongest and weakest sectors**

Answer: D

Explanation:

Detailed Explanation:

Relative Strength Analysis (comparing Sector ETF vs. S&P 500) is the primary technical tool for sector rotation. It allows an analyst to objectively identify the strongest (leaders) and weakest (laggards) sectors to allocate capital efficiently⁴⁸.

NEW QUESTION # 113

Which of the following is NOT associated with commodities as an asset?

- A. Storage cost¹²⁴¹²⁵
- **B. Dividend^{128dend129}**
- C. Transportation cost¹²⁶¹²⁷
- D. Taxes¹²²¹²³

Answer: B

Explanation:

Detailed Explanation:

Commodities are physical goods (corn, oil, gold). They incur storage and transportation costs and are subject to taxes. However, unlike stocks (equity), commodities do not pay dividends or interest. They are non-yielding assets.

NEW QUESTION # 114

A typical head and shoulder formation requires about _____ for formation.

- **A. Three months**
- B. Three weeks
- C. Three days
- D. Three years

Answer: A

Explanation:

Detailed Explanation:

Major reversal patterns like the Head and Shoulders are significant structures that take time to develop.

According to classical technical analysis, a reliable H&S top typically takes three months or more to form to have major predictive implications.

NEW QUESTION # 115
