701. Frage

An investor requires a social return and will tolerate a sub-market financial return. This best characterizes:

- A. social investing.
- **B. impact investing.**
- C. sustainable and responsible investing.

Antwort: B

Begründung:

Impact investing is characterized by the intention to generate a measurable, beneficial social or environmental impact alongside a financial return. Investors engaged in impact investing are often willing to accept sub-market financial returns to achieve their social or environmental goals. This differentiates impact investing from social investing, which may focus more on avoiding negative impacts, and sustainable and responsible investing, which seeks to balance financial returns with ESG factors.

702. Frage

In which country is the proposal of shareholder resolutions most common?

- **A. US**
- B. UK
- C. Australia

Antwort: A

Begründung:

Prevalence in the US:

Shareholder resolutions are a prominent feature of the corporate governance landscape in the United States. They allow shareholders to propose changes or raise concerns about a company's policies, practices, and governance. According to the CFA Institute, the US has a well-established tradition of shareholder activism, with a significant number of resolutions submitted annually on various issues, including ESG matters.

Regulatory Framework:

The regulatory framework in the US, particularly the rules enforced by the Securities and Exchange Commission (SEC), provides shareholders with the right to propose resolutions and ensures that these proposals are included in the company's proxy materials if they meet certain criteria.

The CFA Institute notes that the US regulatory environment is conducive to shareholder activism, facilitating the submission and consideration of shareholder resolutions.

Engagement and Influence:

Shareholder resolutions are an important engagement tool for investors in the US, allowing them to influence corporate behavior and advocate for changes in policies related to environmental, social, and governance issues.

The MSCI ESG Ratings Methodology highlights that shareholder resolutions can drive significant changes in company practices, particularly when they garner substantial support from investors.

Comparison with Other Countries:

While shareholder resolutions are also used in other countries such as the UK and Australia, the frequency and impact of these resolutions are more pronounced in the US.

The CFA Institute indicates that the shareholder resolution process in the US is more formalized and widely used compared to other jurisdictions, making it the most common country for the proposal of shareholder resolutions.
