BraindumpsPrep's PEGACPLSA23V1 Dumps Questions With 365 Days Free Updates

Questions of Certified Pega Lead System Architecture (LSA) Exam 23 desktop practice exam software are similar to the actual PEGACPLSA23V1 exam questions. This gives you a genuine feeling of being in an PEGACPLSA23V1 exam atmosphere. This feature helps you become familiar with the PEGACPLSA23V1 real test format and improves your ability to do well on the actual PEGACPLSA23V1 exam

Pegasystems Certified Pega Lead System Architecture (LSA) Exam 23 Sample Questions (Q10-Q15):

NEW QUESTION # 10

What are the benefits of analyzing Microjourneys in designing Pega applications? (Select all that apply)

- A. Identifying user pain points and improving user experience.
- B. Optimizing backend processes and data flow.
- C. Determining the hardware and infrastructure requirements.
- D. Creating reusable components for faster application development.

Answer: A,B

NEW QUESTION # 11

A credit card dispute application has multiple integrations to fetch the card, customer, transaction, and account details. For any exceptions in these integration calls, the cases are routed to different work queues based on the nature of the exception. Analysts

open the case from the work queue and perform the Retry/Resume problem flow.
What is the optimal way to implement this requirement?

- A. Perform a save-as of the FlowProblems flow rule into your application ruleset and update the ProblemFlowWorkBasket assignment, Use business logic in Route To section and use a decision tree.
- B. Customize the Work-.getFlowProblemOperator activity and set the parameter AssignTo to the work queues based on the exception type.
- C. Perform a save-as of the FlowProblems flow rule into your application ruleset and update the ProblemFlowWorkBasket assignment to use a decision table to return the work queue.
- **D. Customize the Work-.getFlowProblemOperator activity, and set the OperatorToInform parameter to the work queues based on the exception type.**

Answer: D

NEW QUESTION # 12

A Pega Platform application uses the following security configuration: the Disputes:CardManager access group has Disputes:Manager and Disputes:User access roles listed in that order. The Disputes:Manager role can only view the case but cannot create the case. The Disputes:User role can create a dispute case.

Which one of the following approaches would you use to deny case creation to the Disputes:CardManager access group?

- **A. Stop access checking once the Dispute\;Manager role explicitly denies case creation.**
- B. Create a privilege rule on the Dispute class and add the rule to the Disputes\;Manager and Disputes\;User access roles.
- C. Create an access when rule to conditionally allow case creation in dispute class to explicitly restrict access.
- D. Create a conditional privilege by using an access when rule to restrict access to the Create-Stage process.

Answer: A

NEW QUESTION # 13

A Lead System Architect (LSA) team has a task to automate a design solution grading system.

Graders use the system to capture the score using a rubric (instructions) defined for the scenario. The rubric contain questions and statements against which the evaluation occurs.

The submitted design solution can fall into one of four categories: Excellent, Good, Not Bad, Bad. The score for each of these four categories varies between different versions of the instructions. For example, an Excellent score is anything above 75 in version 1.1. In version 1.2, a score above 65 is Excellent. Exam results are decided based on the average of the question scores. The result is either Pass, Fail, or Fix. For example, a total score between 60 and 75 is considered Fix.

The results range is version-dependent. Now, there is a debate within the team as to what data types the team should create.

Which one of the following options is the best data model design and implementation approach for this requirement?

- **A. Rubric, Question, Response, CategoryRange, and ResultRange.**
- B. QuestionCategory, CategoryRange, and ResponseCategory.
- C. QuestionsList, ResponseCategory, CategoryRange, and ResultList.
- D. RubricQuestions, ResponseRange, CategoryRange, and ResultRange.

Answer: A

NEW QUESTION # 14

As part of an underwriting process, the application must generate a risk factor for a loan and insert the risk factor into the Loan case. The risk factor generation is an intensive calculation that requires several minutes to run.

The calculation slows down the environment. You want to have all risk factor calculations run automatically between the hours of 10:00 PM and 6:00 AM to avoid the slowdown during daytime working hours.

Which two design options best fit this solution?

- A. Use an advanced agent to fetch and process the Loan Risk factors.
- B. Use a job scheduler to fetch all the Loan cases with the Pending-RiskCalculation status, and then calculate the risk factor and call Resume Flow.
- **C. Use a delayed dedicated queue processor and set the DateTime for processing to 10 PM using the Run in background shape.**

- D. Use standard agent to process the queued Loan cases.
- E. Use a standard queue processor to perform the calculation. Pause the case until 10 PM and include a step in the flow to queue the case for the queue processor.

Answer: C,E

NEW QUESTION # 15

.....

BraindumpsPrep has a huge Pegasystems industry elite team. They all have high authority in the PEGACPLSA23V1 area. They use professional knowledge and experience to provide training materials for people ready to participate in different IT certification exams. The accuracy rate of exam practice questions and answers provided by BraindumpsPrep is very high and they can 100% guarantee you pass the exam successfully for one time. Besides, we will provide you a free one-year update service.
