

Valid NIOS-DDI-Expert Exam Pattern & NIOS-DDI-Expert Test Testking

NIOS Exam Pattern: Check Subject-Wise Weightage

P.S. Free & New NIOS-DDI-Expert dumps are available on Google Drive shared by PassTorrent: <https://drive.google.com/open?id=1TXC2WUO36xHuAhVzN5VD2jO6gFVFOUxY>

All these three Infoblox Qualified NIOS DDI Expert - INE (NIOS-DDI-Expert) exam questions formats offered by the PassTorrent are easy to use and perfectly work with all the latest web browsers, operating systems, and devices. The PassTorrent NIOS-DDI-Expert web-based practice test software and desktop practice test software both are the mock Infoblox NIOS-DDI-Expert Exam that will give you real-time Infoblox Qualified NIOS DDI Expert - INE (NIOS-DDI-Expert) exam environment for quick preparation.

The third and last format is the Infoblox NIOS-DDI-Expert desktop practice exam software form that can be used without an active internet connection. This software works offline on the Windows operating system. The practice exams benefit your preparation because you can attempt them multiple times to improve yourself for the Infoblox NIOS-DDI-Expert Certification test. Our Infoblox Qualified NIOS DDI Expert - INE (NIOS-DDI-Expert) exam dumps are customizable, so you can set the time and questions according to your needs.

Valid NIOS-DDI-Expert Exam Pattern - 100% Valid Questions Pool

Our to-the-point and trustworthy Infoblox Qualified NIOS DDI Expert - INE Exam Questions in three formats for the Infoblox NIOS-DDI-Expert certification exam will surely assist you to qualify for Infoblox NIOS-DDI-Expert Certification. Do not underestimate the value of our Infoblox NIOS-DDI-Expert exam dumps because it is the make-or-break point of your career.

Infoblox Qualified NIOS DDI Expert - INE Sample Questions (Q44-Q49):

NEW QUESTION # 44

Which syslog can be used to view boot-up messages from the last reboot of an Infoblox appliance? Choose 3 answers

- A. Syslog via the remote console
- B. Syslog via the NIOS GUI
- C. Syslog via the serial console
- D. Syslog that has been redirected to an external syslog server

Answer: A,C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation: Boot-up messages from an Infoblox appliance are logged in the syslog, which records system events like reboots. These logs can be accessed in multiple ways:

* A (Remote Console): SSH or remote console access (e.g., via "show log syslog" CLI command) shows syslog entries, including boot messages.

* B (External Syslog Server): If configured, NIOS redirects syslog to an external server, preserving boot messages for review.

* C (Serial Console):Direct serial connection during boot captures real-time syslog output, including startup messages.
* D (NIOS GUI):The GUI provides a syslog viewer (Grid > Grid Manager > Logs), but it's not designed for real-time boot message capture and may not show full historical detail unless explicitly exported.
The INE course emphasizes troubleshooting via logs, including these methods.References:Infoblox NIOS Administrator Guide - Logging; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 45

What can an administrator do with an Option Filter in NIOS?

- **A. Match on any DHCP options provided by the client**
- B. Match only vendor-specific options such as Option 60
- C. Match only on device types
- D. Match on any DHCP options provided by the server

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:In NIOS, DHCP Option Filters allow administrators to define rules for matching DHCP client requests based on the options they send in their DHCP packets. These filters are highly flexible and can match any DHCP option provided by the client, such as Option 55 (Parameter Request List), Option 60 (Vendor Class Identifier), or custom options. This enables precise DHCP policy enforcement, like assigning specific IP ranges or options to certain devices. Option B is incorrect because filters apply to client requests, not server responses. Option C is too narrow-while Option 60 is common, filters aren't limited to vendor-specific options. Option D is vague and incorrect; device type matching is a subset of option matching. The INE course covers DHCP troubleshooting, including filter configuration.References:Infoblox NIOS Administrator Guide - DHCP Option Filters; INE Course Content: NIOS DDI DHCP Troubleshooting.

NEW QUESTION # 46

When controlling Grid Members under Grid > Grid Manager > Members, what control options are available from the Toolbar? Choose 3 answers

- **A. Restart**
- **B. Reboot**
- C. Restart GUI
- **D. Suspend**

Answer: A,B,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:Grid Manager Toolbar (Grid > Members) offers member controls:

* A (Reboot):Reboots the appliance-full restart. Correct.
* B (Restart):Restarts services (e.g., DNS, DHCP) without reboot. Correct.
* C (Suspend):Pauses services-useful for maintenance. Correct.
* D:"Restart GUI" isn't a member-level option-GUI runs on GM, not per member. Incorrect.
* Practical Example:In an INE lab, reboot a member, restart services, suspend another, and troubleshoot impacts.References:Infoblox NIOS Administrator Guide - Member Controls; INE Course Content: NIOS DDI Grid Troubleshooting.

NEW QUESTION # 47

A firewall change has interrupted the DHCP Failover communication between two DHCP Failover peers. Both peers are still online and can communicate to clients, but the state is now COMMUNICATIONSINTERRUPTED. What should the administrator do?

- A. Nothing
- **B. Place the secondary peer into PARTNER-DOWN**
- C. Change split value
- D. Place the Primary peer into PARTNER-DOWN

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:DHCP Failover peers sync leases via TCP 647. A firewall blocking this shifts the state to COMMUNICATIONS-INTERRUPTED:

* State Impact:

* Both peers serve existing clients and limited new leases (via MCLT).

* No sync occurs, risking lease conflicts if prolonged.

* Best Action:Manually set one peer toPARTNER-DOWN(Grid > DHCP > Failover > Edit), giving the other full pool control to avoid conflicts.

* Why Secondary:Conventionally, the secondary is set to PARTNER-DOWN, letting the primary take over as the authoritative peer (per Infoblox best practices).

* Options:

* A:Doing nothing risks conflicts if new leases exceed MCLT capacity. Incorrect long-term.

* B:Primary to PARTNER-DOWN cedes control to secondary, less standard. Incorrect.

* C:Secondary to PARTNER-DOWN empowers primary, aligning with failover design. Correct.

* D:Changing split value doesn't address sync loss. Incorrect.

* Practical Example:In an INE lab, you'd simulate this, set secondary to PARTNER-DOWN, and troubleshoot lease consistency post-firewall fix.References:Infoblox NIOS Administrator Guide - DHCP Failover States; INE Course Content: NIOS DDI DHCP Troubleshooting.

NEW QUESTION # 48

VRRP is used for Infoblox High Availability. VRRP requires a virtual IP address, a virtual router ID, a virtual MAC address, and a VRRP priority. The administrator configures which values? (Select all that apply.)

- A. Virtual IP address
- B. Virtual MAC address
- C. Virtual router ID
- D. VRRP priority

Answer: A,C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:Virtual Router Redundancy Protocol (VRRP) is the mechanism Infoblox uses for HA pairs, ensuring seamless failover between active and passive nodes by sharing a virtual IP (VIP). Let's analyze what the administrator configures:

* A (Virtual MAC Address):VRRP automatically generates the virtual MAC address based on the Virtual Router ID (VRID) using the format 00:00:5E:00:01:XX, where XX is the VRID in hexadecimal. The admin doesn't manually set this-it's derived. Incorrect.

* B (Virtual IP Address):The VIP is the shared IP that clients use to reach the HA pair. The administrator must configure this in the HA setup (e.g., 192.168.1.100) to define the service endpoint.

Correct.

* C (Virtual Router ID):The VRID (1-255) uniquely identifies the VRRP group on the network. The admin sets this to avoid conflicts with other VRRP instances. Correct.

* D (VRRP Priority):The priority (0-255) determines which node is active (higher priority wins). The admin configures this (e.g., 100 for active, 90 for passive) to control failover behavior. Correct.

* Practical Example:In an INE lab, you'd configure a VIP (e.g., 10.0.0.10), VRID (e.g., 25), and priorities (e.g., 100/90) to set up an HA pair, then troubleshoot failover using VRRP logs.References:

Infoblox NIOS Administrator Guide - HA Configuration with VRRP; INE Course Content: NIOS DDI Grid Deployment.

NEW QUESTION # 49

.....

Our experts are responsible to make in-depth research on the exams who contribute to growth of our NIOS-DDI-Expert practice guide. Their highly accurate exam point can help you detect flaws on the review process and trigger your enthusiasm about the exam. What is more, NIOS-DDI-Expert Study Materials can fuel your speed and the professional backup can relieve you of stress of the challenge. So their profession makes our NIOS-DDI-Expert preparation engine trustworthy.
