Therefore, Splunk IT Service Intelligence Certified Admin (SPLK-3002) mock exam takers will experience the real exam environment. It will calm down their nerves so they can appear in the Splunk SPLK-3002 final test without anxiety or fear.

### Splunk IT Service Intelligence Certified Admin Sample Questions (Q90-Q95):

#### NEW QUESTION # 90

Which index will contain useful error messages when troubleshooting ITSI issues?

- A. itsi\_summary
- B. **\_internal**
- C. itsi\_notable\_audit
- D. \_introspection

**Answer: B**

#### NEW QUESTION # 91

What is the default importance value for dependent services' health scores?

- A. **0**
- B. Unassigned
- C. 1
- D. 2

**Answer: A**

Explanation:

By default, impacting service health scores have an importance value of 11.

Reference:

A service template is a predefined set of KPIs and entity rules that you can apply to a service or a group of services. A service template helps you standardize the configuration and monitoring of similar services across your IT environment. A service template can also include dependent services, which are services that are required for another service to function properly. For example, a web server service might depend on a database service and a network service. The default importance value for dependent services' health scores is:

D) 10. This is true because the importance value indicates how much a dependent service contributes to the health score of the parent service. The default value is 10, which means that the dependent service has the highest impact on the parent service's health score. You can change the importance value of a dependent service in the service template settings.

The other options are not correct because:

A) 11. This is not true because 11 is an invalid value for importance. The valid range is from 1 (lowest) to 10 (highest).

B) 1. This is not true because 1 is the lowest value for importance, not the default value. A value of 1 means that the dependent service has the lowest impact on the parent service's health score.

C) Unassigned. This is not true because every dependent service has an assigned importance value, which defaults to 10.

#### NEW QUESTION # 92

Which of the following is a recommended best practice for service and glass table design?

- A. Start with base searches, then services, and then glass tables.
- B. Always use the standard icons for glass table widgets to improve portability.
- C. **Design glass tables first to discover which KPIs are important.**
- D. Plan and implement services first, then build detailed glass tables.

**Answer: C**

### NEW QUESTION # 93

What should be considered when onboarding data into a Splunk index, assuming that ITSI will need to use this data?

- A. Plan to build as many data models as possible for ITSI to leverage
- B. Use | stats functions in custom fields to prepare the data for KPI calculations.
- C. Check if the data could leverage pre-built KPIs from modules, then use the correct TA to onboard the data.
- D. Make sure that all fields conform to CIM, then use the corresponding module to import related services.

**Answer: C**

Explanation:

Reference: <https://newoutlook.it/download/book/splunk/advanced-splunk.pdf> When onboarding data into a Splunk index, assuming that ITSI will need to use this data, you should consider the following:

B). Check if the data could leverage pre-built KPIs from modules, then use the correct TA to onboard the data.

This is true because modules are pre-packaged sets of services, KPIs, and dashboards that are designed for specific types of data sources, such as operating systems, databases, web servers, and so on. Modules help you quickly set up and monitor your IT services using best practices and industry standards. To use modules, you need to install and configure the correct technical add-ons (TAs) that extract and normalize the data fields required by the modules.

The other options are not things you should consider because:

A). Use | stats functions in custom fields to prepare the data for KPI calculations. This is not true because using | stats functions in custom fields can cause performance issues and inaccurate results when calculating KPIs.

You should use | stats functions only in base searches or ad hoc searches, not in custom fields.

C). Make sure that all fields conform to CIM, then use the corresponding module to import related services.

This is not true because not all modules require CIM-compliant data sources. Some modules have their own data models and field extractions that are specific to their data sources. You should check the documentation of each module to see what data requirements and dependencies they have.

D). Plan to build as many data models as possible for ITSI to leverage. This is not true because building too many data models can cause performance issues and resource consumption in your Splunk environment. You should only build data models that are necessary and relevant for your ITSI use cases.

### NEW QUESTION # 94

When creating a custom deep dive, what color are services/KPIs in maintenance mode within the topology view?

- A. Gear Icon
- B. Blue
- C. Purple
- D. Gray

**Answer: D**

Explanation:

Explanation

Services, entities, and KPIs that are fully or partially impacted by a maintenance window appear in a dark gray color on pages that display health scores, including service analyzers, service and entity details pages, glass tables, multi-KPI alerts, and deep dives.

### NEW QUESTION # 95

.....

We strongly recommend the SPLK-3002 exam questions compiled by our company. On one hand, our SPLK-3002 test material owns the best quality. When it comes to the SPLK-3002 study materials selling in the market, qualities are patchy. But our SPLK-3002 test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our SPLK-3002 Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.
