ActualTestsIT offers desktop practice exam software and web-based Talend-Core-Developer practice tests. These Talend-Core-Developer practice exams help you know and remove mistakes.

Talend Core Certified Developer Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54
Which statement describes a Data Preparation recipe?

- A. Dataset designed specifically for export
- B. Datasets created for external applications
- C. List of semantic types associated with a dataset
- D. Set of functions applied to a dataset

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
In Talend Cloud Data Preparation, a recipe refers to a sequence of data transformation steps applied to a dataset. These steps can include actions like filtering, cleansing, enriching, and formatting data to prepare it for analysis or reporting. The recipe ensures that the same transformations can be consistently reapplied to the dataset or similar datasets, promoting data consistency and efficiency.
Why not other options?
* Option A: A recipe is not a dataset itself but a set of transformation instructions applied to a dataset.
* Option C: While semantic types are important, a recipe encompasses more than just listing them; it involves actionable transformations.

* Option D:Recipes are not datasets but are applied to datasets to achieve desired transformations.

NEW QUESTION # 55
A colleague has exported a Data Integration Job to run outside Talend Studio.
How do you run the Job?

- A. Extract the contents of the archive and run the batch file and shell script.
- B. Extract the content of the archive and run the batch file or the shell script.
- C. Install the Job and start the resulting service.
- D. Extract the files from the archive and run the JAR file.

Answer: B

Explanation:
To run a job that has been exported by a colleague to run outside Talend Studio, you need to extract the content of the archive and run the batch file or the shell script. The archive file contains all the files and libraries required to run the job independently from Talend Studio on any platform that supports Java. The archive file also contains two executable files: a batch file (.bat) for Windows platforms and a shell script (.sh) for Linux platforms. You need to run the appropriate file for your platform by double-clicking on it or using a command line tool. This will launch the job and display its output in a console window.
You do not need to extract the contents of the archive and run both the batch file and shell script, install the job and start the resulting service, or extract the files from the archive and run the JAR file. These methods are not correct or available in Talend Studio and may cause errors or unexpected results. NEW QUESTION # 56
How do you create an empty Joblet?

- A. Right-clicking a space in the Designer and select refactor to Joblect.
- B. Create an empty Job, then export it as a Joblet by right-clicking it in the Repository.
- C. Right-click Joblet Designs the Repository and select Create Joblet.
- D. Create an empty Jon and use the file menu to save it as Joblet.

Answer: C

Explanation:
To create an empty Joblet, you need to right-click on the Joblet Designs node in the Repository tree view and select Create Joblet option. This will open a dialog box where you can enter the name and description of your Joblet and select an icon for it. You can then design your Joblet by adding components and links to it in the Designer workspace.
You cannot create an empty Joblet by creating an empty job, then exporting it as a Joblet by right-clicking it in the Repository, creating an empty job and using the file menu to save it as Joblet, or right-clicking a space in the Designer and selecting refactor to Joblet. These methods are not available in Talend Studio and may cause errors or unexpected results. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Joblets - 7.3]

NEW QUESTION # 57
Whatare the key capabilities of Talend Cloud Data Preparation that improve data quality and accessibility?
Choose 2 answers

- A. Cleanse data
- B. Discover
- C. Transform
- D. Standardize data

Answer: A,D

NEW QUESTION # 58
You implemented a Job in Talend Studio and need to execute it in Talend Cloud. Which options can you use in Talend Management

Console after publishing the Job to Talend Cloud? Choose 2 answers.

- A. Select the artifact name, add and configure a task, then run the task.
- B. Click the artifact name and then run the Job.
- C. Add a task and then run the task.
- D. Select the corresponding task, configure the task, and then run the task.

Answer: A,C

Explanation:
Comprehensive and Detailed Explanation:
After publishing a Job from Talend Studio to Talend Cloud, you can execute it using the Talend Management Console (TMC) by following these steps:
* Add a task and then run the task (Option A):
* In TMC, navigate to theManagementsection and selectTasks.
* Click onAdd Task, choose the published artifact (your Job), configure necessary parameters, and save the task.
* Once the task is created, you can run it manually or schedule it for execution.
* Select the artifact name, add and configure a task, then run the task (Option D):
* In TMC, go to theArtifactssection to view your published Jobs.
* Select the desired artifact and click onAdd Task.
* Configure the task settings as needed and save it.
* After creating the task, you can execute it immediately or set up a schedule.
Why not other options?
* Option B:TMC does not support directly running a Job by clicking on the artifact name without first creating a task.
* Option C:While you can select and configure an existing task, the initial step requires creating the task associated with the artifact.

NEW QUESTION # 59
......

Getting ready for Talend Talend-Core-Developer exam, do you have confidence to sail through the certification exam? Don't be afraid. ActualTestsIT can supply you with the best practice test materials.
