NEW QUESTION # 87
Which of the following Ansible components contains a list of hosts and host groups?

- A. Collection
- B. Fact
- C. Playbook
- D. Inventory

Answer: D

Explanation:
In Ansible, the inventory defines the list of managed nodes (hosts) and groups of hosts. It is the source from which Ansible knows what systems to configure or manage.

NEW QUESTION # 88
Which of the following describes the method of consolidating system events to a single location?

- A. Log aggregation
- B. Threshold monitoring
- C. Webhooks
- D. Health checks

Answer: A

Explanation:
Log aggregation is the process of collecting and consolidating logs from multiple sources into a single location, making it easier to analyze and manage system events.

NEW QUESTION # 89
A systems administrator attempts to edit a file as root, but receives the following error:
Which of the following commands allows the administrator to edit the file?

- A. chown root /etc/resolv.conf
- B. chgrp root /etc/resolv.conf
- C. chattr -i /etc/resolv.conf
- D. chmod 750 /etc/resolv.conf

Answer: C

Explanation:
The lsattr output shows the immutable (i) attribute set on /etc/resolv.conf. This prevents any modifications, even by root. Running chattr -i removes the immutable flag, allowing the administrator to edit the file.

Restricting multiple password changes in one day prevents users from cycling through password changes just to reuse an old password, thereby enforcing stronger security practices.
