

ISQI CTFL-AcT합격보장가능덤프 & CTFL-AcT최신시험대비자료

참고: PassTIP에서 Google Drive로 공유하는 무료, 최신 CTFL-AcT 시험 문제집이 있습니다:
<https://drive.google.com/open?id=18pFOydnAmpADvcZtmWn0ZzfW0rpEmdu>

PassTIP 안에는 아주 거대한IT업계엘리트들로 이루어진 그룹이 있습니다. 그들은 모두 관련업계에서 권위가 있는 전문가들이고 자기만의 지식과 지금까지의 경험으로 최고의 IT인증관련자료를 만들어냅니다. PassTIP의 CTFL-AcT문제와 답은 정확도가 아주 높으며 한번에 패스할수 있는 100%로의 보장도를 자랑하며 그리고 또 일년무료 업데이트를 제공합니다.

ISQI CTFL-AcT (ISTQB Foundation Level - Acceptance Testing) 자격증 시험은 수용 테스트에 대한 전문 지식을 습득하고자 하는 전문가들을 위해 전 세계적으로 인정받는 자격증 프로그램입니다. 이 시험은 소프트웨어 테스트 분야에서 경력을 시작하고자 하는 개인이나 기존 소프트웨어 테스트 기술을 향상하고자 하는 사람들을 위한 입문 자격증 프로그램입니다. 이 자격증 프로그램은 수용 테스트의 종합적인 이해와 소프트웨어 개발 생명 주기에서의 중요성을 제공하기 위해 고안되었습니다.

CTFL-AcT 시험은 수신 검증의 핵심 개념과 원칙을 이해하는 능력을 평가하기 위해 설계된 40 문항의 객관식 문제로 이루어져 있습니다. 시험은 60분 동안 진행되며, 65% 이상의 점수를 획득하여 시험에 통과하면 CTFL-AcT 자격증을 취득하게 됩니다.

CTFL-AcT 시험을 보려면, 지원자는 소프트웨어 개발 및 테스트 원칙에 대한 기본적인 이해가 필요합니다. 이 자격증에 대한 사전 요구사항은 없지만, 소프트웨어 테스트에 대한 이전 경험이 있다면 도움이 될 수 있습니다. 이 시험은 소프트웨어 테스터, 품질 보증 전문가 및 소프트웨어 개발 프로세스에 참여하는 모든 사람들에게 이상적입니다.

ISQI CTFL-AcT최신 시험대비자료, CTFL-AcT질문과 답

PassTIP는 고객님의ISQI CTFL-AcT첫번째 시험에서 패스할수 있도록 최선을 다하고 있습니다. 만일 어떤 이유로 인해 고객님의ISQI CTFL-AcT시험에서 실패를 한다면 PassTIP는ISQI CTFL-AcT덤프비용 전액을 환불 해드립니다. 시중에서 가장 최신버전인ISQI CTFL-AcT덤프로 시험패스 예약하세요.

최신 ISTQB Foundation Level CTFL-AcT 무료샘플문제 (Q62-Q67):

질문 # 62

Which one of the following sentences describes BEST a major advantage when business analysts and testers review the acceptance criteria together?

- A. A shared vision between the business analyst and the tester on acceptance criteria facilitates the design of acceptance test cases.
- B. A joint review ensures that non-functional quality criteria are taken into account.
- C. The review of acceptance criteria is a good practice to improve the quality of test reports.
- D. The review of acceptance criteria helps to verify that acceptance test cases cover business processes, business rules and

business risks.

정답: A

설명:

Collaboration between business analysts and testers is essential in defining and reviewing acceptance criteria.

When both roles work together, they ensure the criteria are not only aligned with business goals but also testable and clearly specified.

Option A is correct because shared understanding of acceptance criteria allows testers to design test cases that truly validate business expectations, reducing misinterpretations and increasing confidence in the product.

Other options:

B is valid but not the best - non-functional requirements are important but often handled separately.

C is partially correct but assumes acceptance test cases already exist, whereas the review often happens earlier in the process.

D focuses on test reporting, which is downstream from criteria definition and test case design.

A). A shared vision between the business analyst and the tester on acceptance criteria facilitates the design of acceptance test cases.

질문 # 63

As an acceptance tester you want to test the \$100 withdrawal process described by the following Business Process Model and Notation (BPMN) model.

You would like to achieve the following coverage criterion "execute all possible process tasks". Consider the following test cases:

Test 1: balance = \$100, receipt = YES

Test 2: balance = \$120, receipt = NO

Test 3: balance = \$85

Test 4: balance = \$20, receipt = YES

Which of the following is the minimal set of test cases allowing to achieve required coverage?

- **A. Test 1, Test 3**
- B. Test 2, Test 4
- C. Test 1, Test 2, Test 4
- D. Test 1, Test 2, Test 3

정답: A

질문 # 64

In a project to develop an online booking system, the team decided to strengthen collaborative work between the business analyst and the testers working on the project. Several concrete joint activities have been identified.

- **A. Development of acceptance criteria for user stories**
- B. Review of risk to prioritize acceptance test
- C. Business needs assessment
- D. Definition of Beta Testing sessions

정답: A

설명:

Collaboration between business analysts and testers is critical in Agile and acceptance testing environments.

One of the most effective areas of cooperation is the joint development and review of acceptance criteria for user stories. This ensures that criteria are testable, clearly defined, and aligned with stakeholder expectations.

Option B is correct because creating acceptance criteria is where both business analysts (who understand the business needs) and testers (who ensure testability and clarity) contribute effectively.

Other options:

A (Business needs assessment) is typically a responsibility of business analysts, not a joint activity with testers.

C (Review of risk to prioritize acceptance tests) is a valuable activity but comes after criteria are defined.

While it can be collaborative, it's more specific to test planning.

D (Definition of Beta Testing sessions) is less relevant to ongoing collaborative work between testers and BAs - this involves users and release planning.

B). Development of acceptance criteria for user stories

질문 # 65

Given the following attributes:

- i. commercializability
- ii. functional suitability
- iii. viability
- iv. reliability
- v. security
- vi. cognitive ability
- vii. maintainability

Which one of the following answers contains quality attributes that are MOST relevant for acceptance testing?

- A. iii, iv and v
- B. i, ii and vi
- C. ii, v and vii
- D. ii, v and vi

정답: C

설명:

Acceptance testing primarily focuses on verifying whether a system meets agreed-upon requirements and satisfies the business and user needs. Quality attributes (also known as non-functional requirements) play a vital role in defining the completeness of the acceptance testing process.

Let's analyze the options:

ii. Functional suitability - directly relates to whether the system provides the correct functions as per business needs. Essential in acceptance testing.

v. Security - ensures that the system is protected against unauthorized access or data breaches. Often critical for business stakeholders.

vii. Maintainability - reflects how easily the system can be modified. Relevant in acceptance if maintainability requirements are part of contractual criteria.

Thus, Option B (ii, v, vii) contains three attributes that are very relevant for acceptance testing.

Other options:

A includes vi (cognitive ability), which is not a standard ISO 25010 quality attribute.

C includes i (commercializability) - not a system quality attribute defined in ISO 25010.

D includes iii (viability) - more of a business or market consideration, not system testability.

B). ii, v and vii

질문 # 66

Which one of the following statements regarding acceptance criteria is true?

- A. For each requirement or user story, the acceptance criteria refine and specify what is expected
- B. For each requirement of user story, the acceptance criteria refine and specify how to test it
- C. Acceptance criteria are used to measure code coverage of the test object
- D. Acceptance criteria relate generally to some business goals and sometimes to some business needs

정답: A

설명:

Acceptance criteria define the conditions under which a user story or requirement is considered complete and acceptable to stakeholders. They clarify the expected behavior, outcomes, or attributes of the system.

Option C is correct because it accurately reflects that acceptance criteria are used to specify what is expected from the system in relation to a given requirement or user story. This ensures a shared understanding among developers, testers, and business stakeholders.

Other options:

A is vague and misleading - acceptance criteria relate directly to specific stories or features, not generally to high-level goals.

B is partially correct but limited - while acceptance criteria help define test conditions, their purpose is broader than just test specification.

D is incorrect - acceptance criteria are not related to code coverage, which is a technical test metric.

C). For each requirement or user story, the acceptance criteria refine and specify what is expected

질문 # 67
