# 300-510 Real Question - 300-510 New Braindumps Questions

What's more, part of that VCEEngine 300-510 dumps now are free: https://drive.google.com/open?id=1k7sp79w87qiZ8cfeECScE_3sFw5VGB5p

It is similar to the 300-510 desktop-based software, with all the elements of the desktop practice exam. This 300-510 exam can be accessed from any browser and does not require installation. The 300-510 questions in the mock test are the same as those in the real exam. And candidates will be able to take the web-based 300-510 Practice Test immediately through any operating system and browsers.

Cisco 300-510 certification exam is designed to test the knowledge and skills of IT professionals in implementing advanced routing solutions in a service provider network. 300-510 exam is part of the Cisco Certified Specialist - Service Provider Advanced Routing Implementation certification track, which is intended for individuals who want to specialize in service provider routing technologies.

Cisco 300-510 exam is a certification test that validates an individual's knowledge and skills in implementing advanced routing solutions on a service provider network. 300-510 Exam is designed for professionals who are seeking to demonstrate their expertise in configuring and troubleshooting advanced routing technologies in service provider environments. The Cisco 300-510 exam is a part of the Cisco Certified Specialist - Service Provider Advanced Routing Implementation certification.

300-510 New Braindumps Questions & Reliable 300-510 Test Objectives

There is always a fear of losing the 300-510 exam and this causes you may loss your money and waste the time. There is no such issue if you study our 300-510 exam questions. Your money and exam attempt is bound to award you a sure and definite success if you study with our 300-510 Study Guide to prapare for the exam. According to our data, our pass rate of the 300-510 practice engine is high as 98% to 100%. So if you choose our 300-510 learning quiz, you will pass for sure.

Cisco 300-510 Certification Exam is a valuable credential for IT professionals who want to advance their careers in service provider networking. It demonstrates their proficiency in implementing advanced routing solutions and technologies, which are essential for ensuring the reliability, scalability, and performance of service provider networks. Implementing Cisco Service Provider Advanced Routing Solutions certification can also help candidates differentiate themselves from their peers and gain recognition from their employers as experts in advanced routing solutions.

Cisco Implementing Cisco Service Provider Advanced Routing Solutions Sample Questions (Q281-Q286):
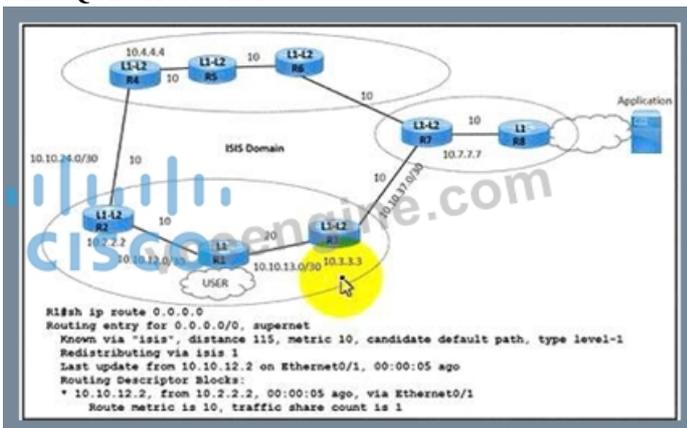

NEW QUESTION # 281

Refer to the exhibit. A network engineer just replaced five routers on this OSPF network. When the routing protocol is brought up, R5 cannot reach routes that originate on R1. The engineer verified that all connected links have established neighbor relationships. R5 reaches routes originating on R3 and R4. Which action resolves the issue?

- A. Configure OSPF to have a contiguous Area O.
- B. Configure automatic neighbor discovery on RI and R5.
- C. Configure an OSPF virtual link to bridge Area 0 on routers R3 and R4.
- D. Configure each link to be point-to-point.

Answer: C

NEW QUESTION # 282

Refer to the exhibit An engineer is troubleshooting a networking issue with several symptoms
* The shortest path from router R1 to R8 is underused and the longest path is overused
* Traffic from 10.1.1 1 to 10 8 8 8 is routed on the longest path
* Traffic between the R1 and the application server is experiencing packet drops and latency problems.
Which action resolves the issue?

- A. Increase the RI to R2 link metric to 20.
- B. Configure a Level 2 IS-IS domain on router RI.
- C. Configure route leaking for the IP address Of the application server on router RI.
- D. Block the advertisement of the application server IP address to router R6.

Answer: B

NEW QUESTION # 283
Refer to the exhibit.

An engineer is addressing an IS-IS design issue which is running within the topology. All links are running on FastEthernet, except the link between R5 and R4, which is Gigabit Ethernet. Which statement about the design is true?

- A. R4 prefer to reach R5 using R1 as the next hop
- B. R5 prefers to use R4 as the next hop for all routes
- C. All links have equal cost if the default metric is used
- D. R1 prefer to use R5 as the next hop to reach R4

Answer: C

NEW QUESTION # 284
Which two conditions must be met before separate ISPs can provide interdomain multicast routing? (Choose two.)

- A. Each ISP must configure MSDP to connect its individual multicast administrative domain to the domains at other ISPs.
- B. Each ISP must replace its RP assignment with a global RP.
- C. Each ISP must dedicate a single router to handle multicast traffic between providers.
- D. Each ISP must configure its network to use PIM-DM.
- E. Each ISP must support intradomain multicast routing.

Answer: A,E

Explanation:
https://www.cisco.com/c/en/us/td/docs/ios/solutions_docs/ip_multicast/Phase_1/mcstmsdp/mcst_ p1.html

NEW QUESTION # 285
Refer to the exhibit. A network operator is getting the route for 10.11.11 0/24 from two upstream providers on #XR3.
The network operator must configure #XR3 to force the 10.11.11.0/24 prefix to route via next hop of 10.0.0.9 as primary when available.
Which of these can the operator use the routing policy language for, to enforce this traffic forwarding path?

```
RP/0/0/CPU0:XR3#show bgp 10.11.11.0
Thu Jun 20 20:44:15.749 UTC
BGP routing table entry for 10.11.11.0/24
Versions:
  Process          bRIB/RIB      SendTblVer
  Speaker             9             9
Paths: (2 available, best #2)
  Advertised to update-groups (with more than one peer):
      0.1
  Path #1: Received by speaker 0
  Not advertised to any peer
  1
      10.0.0.9 from 10.0.0.9 (192.168.0.1)
        Origin IGP, metric 0, localpref 100, valid, external
        Received Path ID 0, Local Path ID 0, version 0
        Origin-AS validity: not-found
  Path #2: Received by speaker 0
  Advertised to update-groups (with more than one peer):
      0.1
  1
      10.0.0.13 from 10.0.0.13 (192.168.0.2)
        Origin IGP, metric 0, localpref 100, weight 651, valid, external, best, group-best
        Received Path ID 0, Local Path ID 0, version 9
```

- A. weight of 0 on the prefix coming from 192.168.0.2
- B. weight of 100 on the prefix coming from 192.168.0.1
- C. higher local preference on the prefix coming from 192.168.0.1
- D. lower local preference on the prefix coming from 192.168.0.2

Answer: A

Explanation:
Weight is the first attribute in path selection algorithm and is 0 for eBGP routes by default. If we set it to 0, router will continue from weight to the bottom, and when comparing neighbor router IDs it will find 192.168.0.1 less than 192.168.0.2 and the path will be selected as the best.
