Answer: D

NEW QUESTION # 67

A developer needs to display read-only contact information in a OmniScript. The developer will format the information as a table, using merge codes to dynamically include first name, last name, street address, state, postal, code, and country from the data JSON. Which OmniScript element should the developer use to meet this requirement?

- A. Rich text Area
- B. Text Block
- C. Edit Block
- D. Text area

Answer: B

Explanation:

A Text Block element allows the developer to display read-only text in a table format, using merge codes to dynamically include data from the data JSON. A Rich Text Area element is used to display formatted text with images and links. A Text Area element is used to display editable text in a single line or multiple lines. An Edit Block element is used to display editable fields in a form layout.
