## Reliable Category-7A-General-and-Household-Pest-Control Test Experience - Category-7A-General-and-Household-Pest-Control Valid Exam Questions

Our Category-7A-General-and-Household-Pest-Control training materials offer you everything you need to take the certification and face the challenge of professional knowledge points. The Category-7A-General-and-Household-Pest-Control exam dumps are

written and approved by our IT specialist based on the real questions of the formal test. Our latest learning materials contain the valid test questions and correct Category-7A-General-and-Household-Pest-Control Test Answers along with detailed explanation. We will give your money back in full if you lose exam with our Category-7A-General-and-Household-Pest-Control practice exam.

## OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q48-Q53):

### NEW QUESTION # 48

Bait stations confine toxic substances to removable units. Their successful use depends on their:

- A. Harborage
- B. Application as a dab of material
- C. Placement

**Answer: C**

Explanation:

Bait stations are effective for controlling pests like roaches or rodents when placed in areas where pests are active, such as near food sources or nesting sites. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) emphasizes that placement is critical for success, as improper placement reduces pest contact with the bait. Option A (harborage) refers to pest hiding spots, not bait station use. Option B (application as a dab) applies to gel baits, not bait stations.

### NEW QUESTION # 49

The term commercial pesticide applicator includes anyone applying pesticides as a service, and the commercial pesticide applicator must be licensed \_\_\_\_ pesticides.

- A. To apply any
- B. Only to apply restricted use
- C. Only to apply general use

**Answer: A**

Explanation:

In New Jersey, a commercial pesticide applicator is defined as anyone applying pesticides as a service, whether for hire or as part of their job (N.J.A.C. 7:30-1.2). This includes both general use and restricted use pesticides (RUPs). A Category 7A applicator must be licensed to apply any pesticide, as their work may involve both types depending on the pest and situation. Option A is incorrect because it excludes RUPs, which applicators may need to use. Option B is incorrect because it excludes general use pesticides, which are commonly used in household pest control.

### NEW QUESTION # 50

Cockroaches develop through:

- A. Gradual metamorphosis (egg, nymph, adult)
- B. Complete metamorphosis (egg, larva, pupa, adult)
- C. Total metamorphosis (egg, adult)

**Answer: A**

Explanation:

Cockroaches undergo gradual metamorphosis, which includes three stages: egg, nymph, and adult.

Nymphs hatch from eggs and resemble smaller, wingless adults, molting several times before reaching maturity. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7:

Cockroaches) confirms this life cycle for common species like the German cockroach. Option B (complete metamorphosis) applies to insects like flies or beetles. Option C (total metamorphosis) is not a recognized term and is incorrect.

### NEW QUESTION # 51

If you wear contacts, \_\_\_\_ when handling pesticides.

- A. Do not wear them
- B. Wear a face shield
- C. Wear goggles

**Answer: A**

Explanation:

Contact lenses can trap pesticide residues against the eye, increasing the risk of irritation or injury if exposure occurs. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 3: Pesticide Safety) advises applicators to not wear contact lenses when handling pesticides to avoid this risk. Option A (face shield) and Option B (goggles) are protective measures for the eyes but do not address the specific hazard of contact lenses trapping chemicals.

## NEW QUESTION # 52

Which is the correct choice for the following application situation using TEMPRID?

For an outdoor application for ticks, the:

- A. Suggested rate of application is 0.54 fluid ozs. per 1000 sq. ft.
- B. 7A category does not cover treatment for ticks outdoors; you would need a 7B category certification
- C. Suggested rate of application is 0.075% per 1000 sq. ft.

**Answer: A**

Explanation:

TEMPRID SC (a common pesticide for Category 7A) is labeled for outdoor tick control. The label specifies a rate of 0.54 fl. oz. per 1000 sq. ft. for outdoor perimeter applications, which aligns with the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) for tick control. Option A is incorrect because Category 7A does cover outdoor tick treatments adjacent to structures (see Question 63). Option B (0.075% per 1000 sq. ft.) refers to a concentration rate for indoor applications, not the volume rate for outdoor use.

## NEW QUESTION # 53

.....

With the help of UpdateDumps's marvelous brain dumps, you make sure your success in Category-7A-General-and-Household-Pest-Control certification exam with money back guarantee. UpdateDumps serves a huge network of its clientele with the state of the art and exam-oriented short-term study content that requires as little as a two-week time to get ready the entire Category-7A-General-and-Household-Pest-Control Certification syllabus.
