試験の準備方法-最高のDrupal-Site-Builder日本語版試験解答試験-ハイパースレートのDrupal-Site-Builder対応問題集

Drupal-Site-Builder試験問題を購入すると、Drupal-Site-Builder学習ツールの24時間オンラインサービスが提供されます。ご不明な点がございましたら、電子メールをお送りください。私たちはあなたにフィードバックを迅速に提供し、問題の解決を心からお手伝いします。Googleのスペシャリストは、Drupal-Site-Builder学習ツールに更新があるかどうかを毎日確認しています。更新システムがある場合は、自動的に送信されます。したがって、Drupal-Site-Builderテストトレントが最新の知識を持ち、変化のペースに追いつくことを保証できます。

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 認定 Drupal-Site-Builder 試験問題 (Q34-Q39):

質問 #34

The development team does monthly releases to the production system. The deployment lasts for an hour.

During the deployment time, the site is put into maintenance mode. You want a certain set of users to be able to access the site during maintenance mode as well.

How do you accomplish this?

- A. Only administrators can access the site during maintenance mode
- **B. Create a new role, assign users to the role and provide permission "Use the site in maintenance mode" to new role**
- C. Under permissions page, provide permission "Administer site" to required users
- D. Create a new role, assign users to the role. Go to Configuration # Development # Maintenance mode and select role to

allow access

正解: B

解説:

In Drupal 10 and Drupal 11, access to the site during maintenance mode is controlled through a specific permission rather than a configuration setting tied directly to roles on the maintenance mode page. The correct approach is to create a role and grant it the permission "Use the site in maintenance mode." Users assigned this role will be able to bypass the maintenance mode restriction and access the site while it is offline for regular visitors.

Option C reflects this exact mechanism and aligns with Drupal core's permission-based access control system. Drupal uses roles and permissions extensively to manage access, and maintenance mode is no exception.

Option A is incorrect because access is not limited strictly to administrators; it depends on permissions.

Option B is incorrect because the Maintenance mode configuration page does not provide role selection for access-this is a common misconception. Option D is also incorrect because granting "Administer site" gives excessive privileges and is not required for maintenance mode access; it violates the principle of least privilege.

Therefore, assigning the "Use the site in maintenance mode" permission is the correct, secure, and Drupal- recommended solution.

質問 # 35

Your site is experiencing high page load times. When looking at recent log messages, you noticed a high frequency of "page not found" messages from a single IP address. On further investigation, the IP address was tracked to a suspicious crawler.

Which step will you take to improve site performance?

- A. Visit the Search administration page, select redirect 404s to the search page.
- B. Enable "Ban" module and configure it to ban the IP address found in the logs.
- C. Visit the Performance administration page, select "enable fast 404s".
- D. No action needed, Drupal automatically blocks any such suspicious visitors.

正解: C

解説:

The best answer is B because the problem described is a large volume of 404 Page Not Found requests generated by a crawler, and Drupal core includes Fast 404 handling specifically to reduce the performance cost of such requests. In Drupal 10 and Drupal 11, core contains a Fast404ExceptionHtmlSubscriber and configuration under system.performance:fast_404 . Drupal's API documentation explains that Fast 404 returns a minimalist 404 response for matching requests instead of going through the full themed page handling, which lowers processing overhead for repeated invalid URL requests.

Option A may help block a bad actor, but banning one IP address is not the Drupal-documented performance feature aimed at reducing the cost of many 404s. Option C would worsen the situation because redirecting missing pages to search adds extra processing rather than reducing it. Option D is incorrect because Drupal does not automatically block suspicious visitors just because they generate many 404 log entries. Also, Drupal

10 release notes explicitly note that Fast 404 is a core capability and that separate legacy settings.php-based handling is no longer the recommended approach.

質問 # 36

The site you are managing has a "Comments approval" process. You have moderators with appropriate permissions to review and approve comments. The moderators want to see all the unapproved comments sorted by the node on which they are posted, but they can't do this on the Comments approval page.

What is the simplest way to solve this problem?

- A. Have the content editor review comments by visiting the node instead of using the Comments page.
- B. Create an Export view, so the content editor can review comments in a spreadsheet.
- C. Create a View of unapproved comments and set the sort order to "Entity ID."
- D. Edit the Comments View, and update the table settings to make the Entity ID field sortable.

正解: D

解説:

In Drupal 10 and Drupal 11, the administrative Comments listing is provided by the core comment View. In core's default views.view.comment configuration, the comments administration display uses the table style, includes the entity_id field labeled "Posted in", and that column is present in the table configuration.

However, core sets that column's table option to sortable: false , while other columns such as Subject, Author, and Updated are sortable. That is why moderators cannot sort the approval page by the content item the comment belongs to, even though the field is already there.

Because the existing approval page already uses a View, the simplest solution is to edit that View and enable sorting for the Entity ID / Posted in column in the table settings. Creating a brand-new View would work, but it is not the simplest option because it duplicates an existing administrative display. The other options do not address the actual issue with the current moderation screen. Drupal's content administration documentation also confirms that comments are managed from the Comments administration page, making improvement of that interface the most appropriate site-building solution.

質問 # 37

What is meant by headless Drupal?

(Select 2 options)

- A. Just another phrase for "decoupled Drupal"
- B. Publishing content automatically in Drupal
- C. Exposing Drupal content to other systems such as native applications.
- D. Applying security updates automatically to Drupal installation

正解: A、C

解説:

In Drupal's official documentation, headless Drupal is described as decoupled Drupal . The documentation explains that decoupled, or headless, Drupal separates the backend content management part of Drupal from the frontend presentation layer . In this architecture, Drupal is used as a content repository and content API, while the frontend can be built with other technologies such as JavaScript frameworks or consumed by other clients. This directly supports option C Drupal documentation also explains that this architecture allows Drupal content to be exposed to other systems and applications through APIs such as JSON:API or REST. That means Drupal can provide content to websites, mobile apps, kiosks, or other digital channels, which matches option B . The purpose of headless Drupal is therefore not automatic updates or automatic publishing, so options A and D are not correct. So, according to Drupal 10 and Drupal 11 documentation, the correct understanding is that headless Drupal means decoupled Drupal and involves exposing Drupal-managed content to external systems or applications through APIs .

質問 # 38

Your customer support department has asked to build a form on your Drupal website. The form should have the following fields: Subject (text plain), Name (text plain), Email (Email), Message (text long), Attachment (file).

A developer built the form without any validations or restrictions. The form is accessible to Anonymous users of the site.

What is the potential security threat with this form?

- A. Anonymous users should not have access to forms.
- B. There are no security issues with this form.
- C. Anonymous users can upload corrupted or virus-infected files to your server.
- D. Putting a very long text into the message field, may timeout the form submit.

正解: C

解説:

The main security risk in this scenario is the unrestricted file upload field exposed to anonymous users.

Drupal's file API documentation explains that file uploads must use validation and a defined list of allowed extensions. Core specifically notes that uploading arbitrary files is dangerous and that validation is necessary.

The Drupal file API also states that using a managed file field with defined allowed extensions helps sanitize filenames, validate files, and block insecure extensions by default. Without those restrictions, anonymous visitors could upload unsafe files, including malicious or infected files, to the server.

Option A is too broad, because anonymous users can legitimately access public forms on Drupal sites. The issue is not public access by itself, but public access combined with missing validation and upload restrictions

. Option C describes a possible performance problem, not the most important security threat identified by Drupal's documentation.

Option D is clearly incorrect because Drupal's security guidance stresses protecting public forms and validating uploads carefully, especially on forms exposed to anonymous users.
